ASIS Physical Security Professional Exam Sample Questions (Q24-Q29):

NEW QUESTION # 24

Using the normal schedule, what is the early finish date and total float of Activity 10002?

- A. 21 Dec 2023. and 4 days of total float
- B. 24 Dec 2023. and 24 days of tree float
- C. 24 Nov 2023. and 24 days of tree float
- D. 17 Dec 2023. and 4 days of total float

Answer: A

Explanation:

The early finish date and total float are determined using CPM calculations. The PSP Study Guide outlines that early finish is calculated as the early start date plus activity duration, adjusted for calendar constraints (PSP Study Guide, Subchapter 2.2.5, "Constraints and Calendars").

Steps:

- * Determine early start using forward pass calculations.
- * Add the activity duration.
- * Consider non-working days or holidays as per the project calendar.
- * Calculate float as the difference between late start and early start or late finish and early finish.

NEW QUESTION # 25

Value engineering is:

- A. established to provide the greatest value
- B. intended to provide the least life-cycle cost
- C. intended to determine if the project will be completed economically
- D. targeted at the design itself

Answer: A

NEW QUESTION # 26

Free float is the

- A. Amount of time the early start of an activity can be delayed without impacting the early start of the successor activity.
- B. Difference between the early dates and late dates of an activity.
- C. Difference between the early finish dates and late finish dates of an activity.
- D. Difference In float value of the critical path activities and the float value of the specific activity being analyzed.

Answer: A

NEW QUESTION # 27

Based on the stated costs, what percentage of the total cost comes from the 2000 series of activities?

- A. 2.2%
- B. 2.4%
- C. 3.3%
- D. 23%

Answer: B

Explanation:

Cost for 2000 Series Activities:

* Activity 2001: \$150,000.

* Activity 2002: \$25,000.

* Activity 2003: \$18,000.

* Activity 2004: \$96,000.

* Total: $150,000 + 25,000 + 18,000 + 96,000 = 289,000$
 $150,000 + 25,000 + 18,000 + 96,000 = 289,000$

Total Project Cost:

* Total cost: \$7,308,000 (sum of all activities in "normal" schedule).

Percentage Contribution:

* $289,000 \div 7,308,000 \times 100 \approx 3.95\%$
 $\frac{289,000}{7,308,000} \times 100 \approx 3.95\%$

Verification with PSP Guidelines:

The PSP Study Guide emphasizes accuracy in percentage-based cost contributions as a critical analysis tool in project cost management (Ref: PSP Study Guide, Chapter 1B: Cost Breakdown Structure).

How many entities/subcontractors should a scheduled activity cover?

- Answer: B**
