Online DP-300 Version - DP-300 Actual Exam

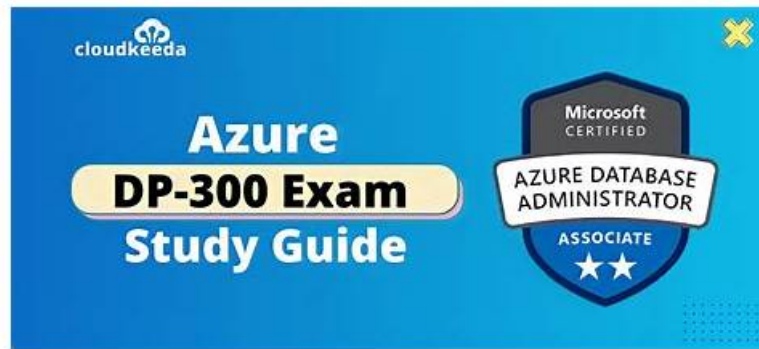

2025 Latest Real4exams DP-300 PDF Dumps and DP-300 Exam Engine Free Share: https://drive.google.com/open?id=1V9IWHUQoijz1jbehdgmREGb0FP7qrKOT

If you have any questions on our DP-300 exam question, you can just contact us for help. Even if it is a technical problem, our professional specialists will provide you with one-on-one services to help you solve it in the first time. And our DP-300 learning materials are really cost-effective in this respect. We always believe that customer satisfaction is the most important. And we always put the considerations of the customers as the most important matters. Our DP-300 Study Guide won't let you down.

Microsoft DP-300 exam is a professional-level certification that validates the skills and knowledge required to administer relational databases on the Microsoft Azure cloud platform. DP-300 exam is designed for database administrators who are responsible for managing and maintaining databases on Azure, and who have experience with SQL Server and Azure data services. DP-300 exam assesses the ability to implement security, backup and recovery, high availability, and performance tuning solutions for Azure databases.

Microsoft DP-300: Administering Relational Databases on Microsoft Azure is a certification exam designed to test the knowledge and skills of database administrators who work with relational databases on the Microsoft Azure platform. DP-300 Exam is part of the Microsoft Certified: Azure Database Administrator Associate certification, which is aimed at professionals who want to demonstrate their expertise in administering Azure SQL databases, Azure SQL Managed Instance, and hybrid SQL Server instances in Azure.

DP-300 Actual Exam, DP-300 Reliable Exam Review

we believe that all students who have purchased DP-300 practice materials will be able to successfully pass the professional DP-300 qualification exam as long as they follow the content provided by our DP-300 study materials, study it on a daily basis, and conduct regular self-examination through mock exams. Of course, before you buy, our DP-300 Study Materials offer you a free trial service, as long as you log on our website, you can download our trial questions bank for free. I believe that after you try DP-300 test engine, you will love them.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q116-Q121):

NEW QUESTION # 116
You have an Azure SQL logical server.
You run the following script.

```
CREATE DATABASE Sales
GO
CREATE TABLE [dbo].[Orders]
  (
    [OrderID] INT NOT NULL,
    [OrderDescription] NVARCHAR (MAX) NOT NULL,
    [Timestamp] Datetime2 NOT NULL
  )
  WITH (
    SYSTEM_VERSIONING = ON,
    LEDGER = ON
    );
GO
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point

Statements	Yes	No
The orders table will allow only rows to be inserted.	○	○
To create additional tables in the Sales database, the LEDGER = ON parameter must be used.	○	○
To ensure that a timestamp is added to each row in the orders table, the GENERATED ALWAYS	○	○

Answer:

Explanation:

Statements	Yes	No
The orders table will allow only rows to be inserted.	◉	○
To create additional tables in the Sales database, the LEDGER = ON parameter must be used.	○	◉
To ensure that a timestamp is added to each row in the orders table, the GENERATED ALWAYS	○	◉

NEW QUESTION # 117
You configure backups for an Azure SQL database as shown in the following exhibit.

Point-in-time-restore

Specify how long you want to keep your point-in-time backups. Learn more

How many days would you like PITR backups to be kept? ⓘ

| 14 |

Long-term retention

Specify how long you want to keep your long-term retention backups. You may choose to keep yearly backups for up to 10 years. Learn more

Weekly LTR Backups
Keep weekly backups for:

| 52 | | Week(s) | ⌄ |

Monthly LTR Backups
Keep the first backup of each month for:

| 60 | | Week(s) | ⌄ |

Yearly LTR Backups
Keep an annual backup for:

| 10 | | Year(s) | ⌄ |

Which weekly backup of the year would you like to keep?

| Week 52 | ⌄ |

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer Area

To restore from a failure that occurred two days ago and caused minimal data loss, you must use a [answer choice]

- point-time restore (PITR) backup.
- point-time restore (PITR) backup.
- yearly long-term retention (LTR) backup.
- weekly long-term retention (LTR) backup.
- monthly long-term retention (LTR) backup.

After the 52nd weekly backup runs, there will be [answer choice] in long term retention.

- 65 backup copies
- 1 backup copy
- 52 backup copies
- 64 backup copies
- 65 backup copies

Answer:

Explanation:

Answer Area

To restore from a failure that occurred two days ago and caused minimal data loss, you must use a [answer choice]

- point-time restore (PITR) backup.
- point-time restore (PITR) backup.
- yearly long-term retention (LTR) backup.
- weekly long-term retention (LTR) backup.
- monthly long-term retention (LTR) backup.

After the 52nd weekly backup runs, there will be [answer choice] in long term retention.

- 65 backup copies
- 1 backup copy
- 52 backup copies
- 64 backup copies
- 65 backup copies

NEW QUESTION # 118

You have two instances of SQL Server on Azure virtual Machines named VM1 and VM2. VM1 hosts a database named dbl.
You plan to create a database availability group (DAG) for dbl. The solution must use certificate authentication between VM1 and VM2.
You need to configure authentication for the outbound connections of VM1.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

1 - From the master database run CREATE MASTER KEY ENCRYPTION BY PASSWORD.
2 - From the master database, run CREATE CERTIFICATE.
3 - From db1, run CREATE ENDPOINT.

NEW QUESTION # 119
You have an Azure virtual machine named VM1 on a virtual network named VNet1. Outbound traffic from VM1 to the internet is blocked.
You have an Azure SQL database named SqlDb1 on a logical server named SqlSrv1.
You need to implement connectivity between VM1 and SqlDb1 to meet the following requirements:
* Ensure that all traffic to the public endpoint of SqlSrv1 is blocked.
* Minimize the possibility of VM1 exfiltrating data stored in SqlDb1.
What should you create on VNet1?

- A. an ExpressRoute gateway
- B. a VPN gateway
- C. a service endpoint
- D. a private link

Answer: D

Explanation:
Explanation
Azure Private Link enables you to access Azure PaaS Services (for example, Azure Storage and SQL Database) and Azure hosted customer-owned/partner services over a private endpoint in your virtual network.
Traffic between your virtual network and the service travels the Microsoft backbone network. Exposing your service to the public internet is no longer necessary.

NEW QUESTION # 120
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique

solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure SQL database named Sales.

You need to implement disaster recovery for Sales to meet the following requirements:
- During normal operations, provide at least two readable copies of
Sales.
- Ensure that Sales remains available if a datacenter fails.

Solution: You deploy an Azure SQL database that uses the General Purpose service tier and failover groups.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:
Instead deploy an Azure SQL database that uses the Business Critical service tier and Availability Zones.
Note: Premium and Business Critical service tiers leverage the Premium availability model, which integrates compute resources (sqlservr.exe process) and storage (locally attached SSD) on a single node.
High availability is achieved by replicating both compute and storage to additional nodes creating a three to four-node cluster.
By default, the cluster of nodes for the premium availability model is created in the same datacenter. With the introduction of Azure Availability Zones, SQL Database can place different replicas of the Business Critical database to different availability zones in the same region. To eliminate a single point of failure, the control ring is also duplicated across multiple zones as three gateway rings (GW).

NEW QUESTION # 121

......

As the most important element that almost all the candidates will take into consider, the pass rate of our DP-300 exam questions is high as 98% to 100%, which is unique in the market and no one has made it. And also the exam passing guarantee that makes our DP-300 Study Guide superior in the market. As the best seller, our DP-300 learning braindumps are very popular among the candidates. Many of the loyal customers are introduced by their friends or classmates.
