Pass Juniper JN0-460 Exam with PassQuestion JN0-460 questions and answers in the first attempt.

<https://www.passquestion.com/>

1 / 4

We know deeply that a reliable JN0-460 exam material is our company's foothold in this competitive market. High accuracy and high quality are the most important things we always looking for. Compared with the other products in the market, our JN0-460 latest questions grasp of the core knowledge and key point of the real exam, the targeted and efficient Mist AI Wired, Specialist (JNCIS-MistAI-Wired) study training dumps guarantee our candidates to pass the test easily. Passing exam won't be a problem anymore as long as you are familiar with our JN0-460 Exam Material (only about 20 to 30 hours practice). High accuracy and high quality are the reasons why you should choose us.

The Juniper JN0-460 certification exam is most useful for candidates who are from the working class, but students who are still in school can also use Juniper JN0-460 dumps in place of searching for other exam-related literature. In order to put it simply, we can state that the Juniper JN0-460 Practice Questions are the only thing that can save you from failing the challenging JN0-460 certification exam.

Pass Juniper JN0-460 Guarantee, Latest JN0-460 Exam Answers

Juniper certification JN0-460 exam is the first step for the IT employees to set foot on the road to improve their job. Passing Juniper Certification JN0-460 Exam is the stepping stone towards your career peak. Exam4Docs can help you pass Juniper certification JN0-460 exam successfully.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q75-Q80):

NEW QUESTION # 75

In the context of deploying wired assurance, which of the following are considered supported architectures?

- A. On-premises data centers
- B. Hybrid cloud environments
- C. Cloud-managed networks
- D. Virtual private networks (VPNs)
- E. Peer-to-peer networks

Answer: A,B,C

NEW QUESTION # 76

Which of the following are true regarding the data and control plane operations in EVPN-VXLAN? (Select two)

- A. VXLAN relies solely on OSPF for data plane learning
- B. EVPN allows for the separation of underlay and overlay networks
- C. VXLAN uses BGP to encapsulate data packets
- D. EVPN provides a control plane for VXLAN to learn MAC addresses

Answer: B,D

NEW QUESTION # 77

Which description accurately defines a Mist AI 5-stage IP Clos network?

- A. It is a hierarchical network architecture commonly used in campus fabrics, consisting of distribution, core, and access layers.
- B. It is a routing protocol specifically designed for campus fabrics, enabling efficient traffic forwarding and path selection.
- C. It is a type of EVPN tunnel encapsulation employed in data center networks for overlay routing.
- D. It is a hierarchical network architecture used in large-scale campus deployments that extends the 3-stage Clos with additional spine and super-spine layers for scalability.

Answer: D

Explanation:

Juniper Mist defines both 3-stage and 5-stage IP Clos architectures for campus and data-center fabrics. The 5-stage IP Clos design adds scalability by introducing spine and super-spine layers above the leaf layer, enabling large campus or aggregation environments.

"The 5-stage IP Clos topology extends the 3-stage design by introducing spine and super-spine tiers. It is ideal for large campus environments requiring additional capacity and hierarchical scaling." Option A: Incorrect - Clos is a topology, not a routing protocol.

Option B: Incorrect - VXLAN/EVPN encapsulation operates over Clos but does not define it.

Option C: Incorrect - that describes a traditional three-tier campus (core/distribution/access), not a Clos.

Option D: Correct - the 5-stage IP Clos is a hierarchical, scalable Clos topology with spine and super-spine layers used in large campus or data-center networks.

NEW QUESTION # 78

Which two statements are correct about the EVPN-VXLAN control plane? (Choose two.)

- A. The control plane learns the IP addresses of end-user devices.
- B. The control plane learns the MAC addresses of end-user devices.
- C. The control plane rewrites the destination MAC address of the packet.

- D. The control plane encapsulates the traffic.

Answer: A,B

Explanation:

In an EVPN-VXLAN fabric, the control plane operates over BGP EVPN and is responsible for distributing endpoint reachability information (MAC and IP) among VTEPs. The data plane, by contrast, performs encapsulation and forwarding.

"The EVPN control plane uses BGP to exchange MAC and IP address reachability information between VTEPs, enabling efficient forwarding and loop prevention without relying on flood-and-learn behavior." Option A: Incorrect - encapsulation occurs in the data plane, not the control plane.

Option B: Correct - the control plane distributes MAC-to-VTEP mappings.

Option C: Correct - the control plane also distributes IP-to-MAC associations (Type 2 and Type 5 EVPN routes).

Option D: Incorrect - the control plane does not alter packet headers.

NEW QUESTION # 79

Which two statements are correct about Juniper Mist Dynamic Packet Capture? (Choose two.)

- A. It is automatically attached to the Affected Items list in the Successful Connects SLE.
- **B. No configuration is necessary for Mist's Dynamic Packet Capture.**
- C. It must be globally configured at the organization level.
- **D. It is automatically attached to a client event displayed on the Insights page.**

Answer: B,D

Explanation:

Dynamic Packet Capture (DPC) requires no manual setup.

It is automatically linked to relevant client events on the Insights page, enabling fast root-cause analysis without extra configuration.
