In general, we can say that the D-ISM-FN-01 certification can be a valuable investment in your career that will put your career on the right track and you can achieve your career objectives in a short time period. These are some important benefits that you can gain after passing the EMC D-ISM-FN-01 Certification Exam. Are you ready to pass the D-ISM-FN-01 exam? Looking for a simple, quick, and proven way to pass the EMC D-ISM-FN-01 Exam Questions? If your answer is yes then download Prep4SureReview exam questions and start this journey today.

As a prestigious platform offering practice material for all the IT candidates, Prep4SureReview experts try their best to research the best valid and useful EMC D-ISM-FN-01 exam dumps to ensure you 100% pass. The contents of D-ISM-FN-01 exam training material cover all the important points in the D-ISM-FN-01 Actual Test, which can ensure the high hit rate. You can instantly download the EMC D-ISM-FN-01 practice dumps and concentrate on your study immediately.

## **Outstanding D-ISM-FN-01 Learning Guide bring you veracious Exam Simulation - Prep4SureReview**

In today's rapid economic development, society has also put forward higher and higher requirements for us. In addition to the necessary theoretical knowledge, we need more skills. Our D-ISM-FN-01 exam simulation is a great tool to improve our competitiveness. After we use our D-ISM-FN-01 Study Materials, we can get the D-ISM-FN-01 certification faster. And at the same time, we can do a better job since we have learned more knowledge on the subject.

## **EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q32-Q37):**

### NEW QUESTION # 32

Question:

What is the first step in the machine learning process?

- A. Selecting the type of learning
- **B. Collecting the datasets**
- C. Analyzing the data
- D. Training the model

**Answer: B**

Explanation:

The first step in any ML project is to collect the datasets that will be used to train and validate the model.

This data collection step ensures you have enough representative examples.

After this, data is analyzed, learning type is chosen, and the model is trained.

### NEW QUESTION # 33

Question:

A backup array was able to achieve a 30:1 reduction by finding multiple copies of the same data. Which method was used in this scenario?

- **A. Data deduplication**
- B. Data compression
- C. Data encryption
- D. Data replication

**Answer: A**

Explanation:

Data deduplication is a technique that eliminates redundant copies of data, storing only unique instances.

When multiple copies of the same data are found, deduplication replaces them with references to a single stored copy, significantly reducing storage requirements.

\* Data replication: Involves copying data to another location for redundancy, not reducing storage size.

\* Data encryption: Secures data but doesn't affect storage size.

\* Data compression: Reduces data size by encoding information more efficiently but doesn't eliminate duplicates.

### NEW QUESTION # 34

Question:

An IT department needs to execute automated tasks to perform a business operation. They require workflows for arranging, coordinating, and managing these tasks. Which layer of the Modern Data Center Architecture provides this functionality?

- A. Physical infrastructure
- B. Virtual infrastructure
- C. Services
- **D. Orchestration**

**Answer: D**

Explanation:

The orchestration layer in a modern data center architecture is responsible for automating and coordinating complex tasks and workflows. It enables the integration and management of various services and resources to perform business operations efficiently.

\* Physical infrastructure: Comprises the hardware components.

\* Virtual infrastructure: Includes virtualized resources like VMs.

\* Services: Deliver specific functionalities to end-users.

### NEW QUESTION # 35

Question:

How does Storage Class Memory (SCM) compare to DRAM and flash memory in terms of speed?

- A. SCM is as fast as DRAM
- **B. SCM is slower than DRAM but faster than flash**
- C. SCM is faster than both DRAM and flash
- D. SCM is slower than flash but faster than HDDs

**Answer: B**

Explanation:

Storage Class Memory (SCM) bridges the gap between DRAM and NAND flash memory. It offers faster access times than flash memory but is still slower than DRAM. SCM provides non-volatile storage with performance characteristics closer to DRAM, making it suitable for applications requiring high-speed data access.

### NEW QUESTION # 36

Question:

A company needs to rebuild a failed disk in its RAID 5 array. Which two factors would significantly impact the rebuild time?

- A. Network bandwidth between the server and the storage array
- **B. Write performance of the remaining disks**
- C. Capacity of the cache memory
- **D. Capacity of the failed disk**

**Answer: B,D**

Explanation:

Rebuilding a RAID 5 array after a disk failure depends on:

Capacity of the failed disk (C)- More data means longer rebuild time.

Write performance of the remaining disks (B)- Rebuild involves recalculating parity and writing data to the replacement disk, which stresses the surviving disks.

\* Network bandwidth (A) is only relevant for accessing the array, not for internal rebuild operations.

\* Cache capacity (D) helps performance in some scenarios, but the direct factors are disk size and performance.
