Salesforce Platform Developer II Sample Questions (Q47-Q52):

NEW QUESTION # 47

A company has a native iOS order placement app that needs to connect to Salesforce to retrieve consolidated information from many different objects in a JSON format.

Which is the optimal method to implement this in Salesforce?

- A. Apex REST callout
- **B. Apex REST web service**
- C. Apex SOAP web service
- D. Apex SOAP callout

Answer: B

Explanation:

Apex REST web services are the best method for creating custom endpoints that return data in a specific format, such as JSON, which is perfect for a native iOS application that needs to integrate with Salesforce for retrieving data.

References: Apex Developer Guide - Exposing Apex Methods as REST Web Services

NEW QUESTION # 48

A Lightning web component exists in the system and displays information about the record in context as a modal. Salesforce administrators need to use this component within the Lightning App Builder. Which two settings should the developer configure within the xml resource file?

Choose 2 answers

- **A. Set the IsExposed attribute to true.**
- **B. Specify the target to be lightning_RecordPage**
- C. Specify the target to be lightning_AppPage
- D. Set the IsVisible attribute to true

Answer: A,B

Explanation:

To make a Lightning web component available in the Lightning App Builder, the developer must specify the target where the component can be placed (e.g., record pages) in the .xml file and set the isExposed attribute to true. References: Expose Lightning Web Components for Flow Screens, Quick Actions, App Builder, and Experience Builder

NEW QUESTION # 49

A developer writes the following code:

While testing the code, the developer receives the following error message: System.CalloutException : You have uncommitted work pending What should the developer do? (Choose two.)

- **A. Move the web service callout into an @future method**
- B. Use the asyncSend() method of the HTTP class to send the request in async context
- C. Use Database.insert (order, true) to immediately commit any database changes
- **D. Ensure all callouts are completed prior to executing DML statements**

Answer: A,D

NEW QUESTION # 50

Universal Containers wants to use a Customer Community with Customer Community Plus licenses to allow their customers access to track how many containers they have rented and when they are due back. Universal Containers uses a Private sharing model for External users. Many of their customers are multi-national corporations with complex Account hierarchies. Each account on the hierarchy represents a department within the same business. One of the requirements is to allow certain community users within the same Account hierarchy to see several departments' containers, based on a custom junction object that relates the Contact to the

various Account records that represent the departments.
Which solution solves these requirements?

- A. A Lightning web component on the Community Home Page that uses Lightning Data Services.
- **B. An Apex trigger that creates Apex managed sharing records based on the junction object's relationships**
- C. A custom list view on the junction object with filters that will show the proper records based on owner
- D. A Visualforce page that uses a custom controller that specifies without sharing [0 expose the records

Answer: B

Explanation:

For community users within the same Account hierarchy to see records based on a custom junction object, Apex managed sharing can be used. An Apex trigger can create sharing records based on the junction object relationships, allowing users to see records from different departments as required. References: Apex Developer Guide - Sharing a Record Using Apex

NEW QUESTION # 51

A software company uses a custom object, Defect__c, to track defects in their software. Defect__c has organization-wide defaults set to private. Each Defect__c has a related list of Reviewer__c records, each with a lookup field to User that is used to indicate that the User will review the defect__c.

What should be used to give the User on the Reviewer__c record read only access to the Defect__c record on the Reviewer__c record?

- **A. Apex managed sharing**
- B. Criteria-based sharing
- C. Lightning web component
- D. View All on Defect__c

Answer: A

Explanation:

Apex managed sharing is used to programmatically share records when organization-wide defaults are private. It allows for creating share records that give read-only access to users specified in a related list.
