

Free PDF Quiz 2026 Fortinet FCP_FMG_AD-7.6– Reliable New Exam Labs

What's more, part of that TestPDF FCP_FMG_AD-7.6 dumps now are free: https://drive.google.com/open?id=1sgxrbxuQYCH1_MR6wI4HI9cbnA1JEV3I

Our Fortinet dumps files contain the latest FCP_FMG_AD-7.6 practice questions with detailed answers and explanations, which written by our professional trainers and experts. And we check the updating of FCP_FMG_AD-7.6 exam pdf everyday to make sure the accuracy of our questions. There are demo of FCP_FMG_AD-7.6 free vce for you download in our exam page. One week preparation prior to attend exam is highly recommended.

TestPDF is the website that provides all candidates with IT certification exam dumps and can help all candidates pass their exam with ease. TestPDF IT expert edits all-time exam materials together on the basis of flexibly using the experiences of forefathers, thereby writing the best Fortinet FCP_FMG_AD-7.6 Certification Training dumps. The exam dumps include all questions that can appear in the real exam. So it can guarantee you must pass your exam at the first time.

>> New FCP_FMG_AD-7.6 Exam Labs <<

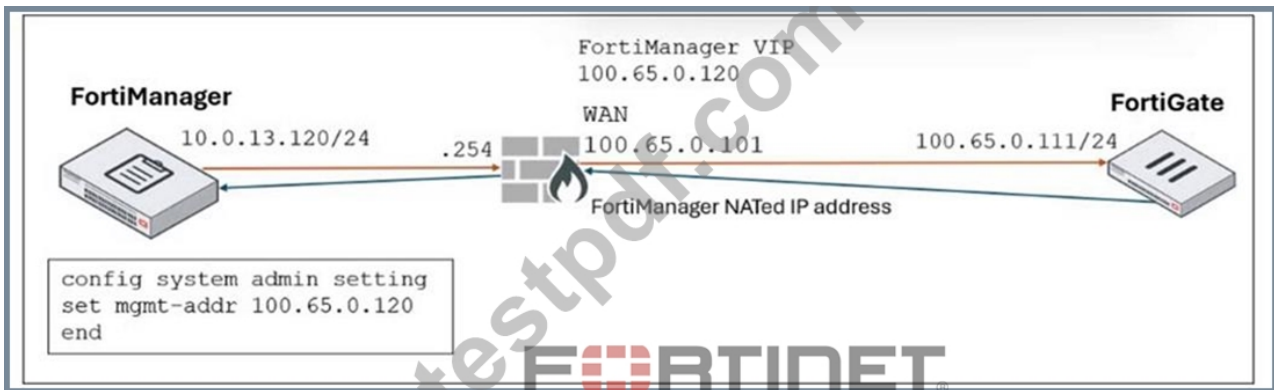

Pass Guaranteed Fortinet - FCP_FMG_AD-7.6 –Reliable New Exam Labs

There are many ways to help you pass Fortinet certification FCP_FMG_AD-7.6 exam and selecting a good pathway is a good protection. TestPDF can provide you a good training tool and high-quality reference information for you to participate in the Fortinet certification FCP_FMG_AD-7.6 exam. TestPDF's practice questions and answers are based on the research of Fortinet certification FCP_FMG_AD-7.6 examination Outline. Therefore, the high quality and high authoritative information provided by TestPDF can definitely do our best to help you pass Fortinet certification FCP_FMG_AD-7.6 exam. TestPDF will continue to update the information about Fortinet certification FCP_FMG_AD-7.6 exam to meet your need.

Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q10-Q15):

NEW QUESTION # 10

Refer to the exhibit.

FortiManager is operating behind a network address translation (NAT) device, and the administrator configured the FortiManager NATed IP address under the FortiManager system administration settings.

What is the expected result during discovery?

- A. FortiManager sets the 100.65.0.120 IP address on FortiGate.
- B. FortiManager sets both the 100.65.0.120 IP address and 10.0.13.120 IP address on FortiGate.
- C. FortiManager sets the 100.65.0.101 IP address on FortiGate.
- D. FortiManager sets both the 100.65.0.120 IP address and 100.65.0.101 IP address on FortiGate.

Answer: A

Explanation:

When FortiManager is behind a NAT device, setting the NATed IP address (100.65.0.120) in the system admin settings causes FortiManager to use that NATed IP address for communication and configuration with FortiGate during discovery and management operations.

NEW QUESTION # 11

Refer to the exhibits. Which IP/netmask will be present in the LAN firewall address object on the Remote-Firewall?

FortiManager device database

Managed FortiGate (4)

- BR1-FGT-1
- HQ-NGFW-1
- Local-Firewall
- Remote-Firewall

Logging FortiGate (4)

Managed FortiAnalyzer (1)

- FortiAnalyzer

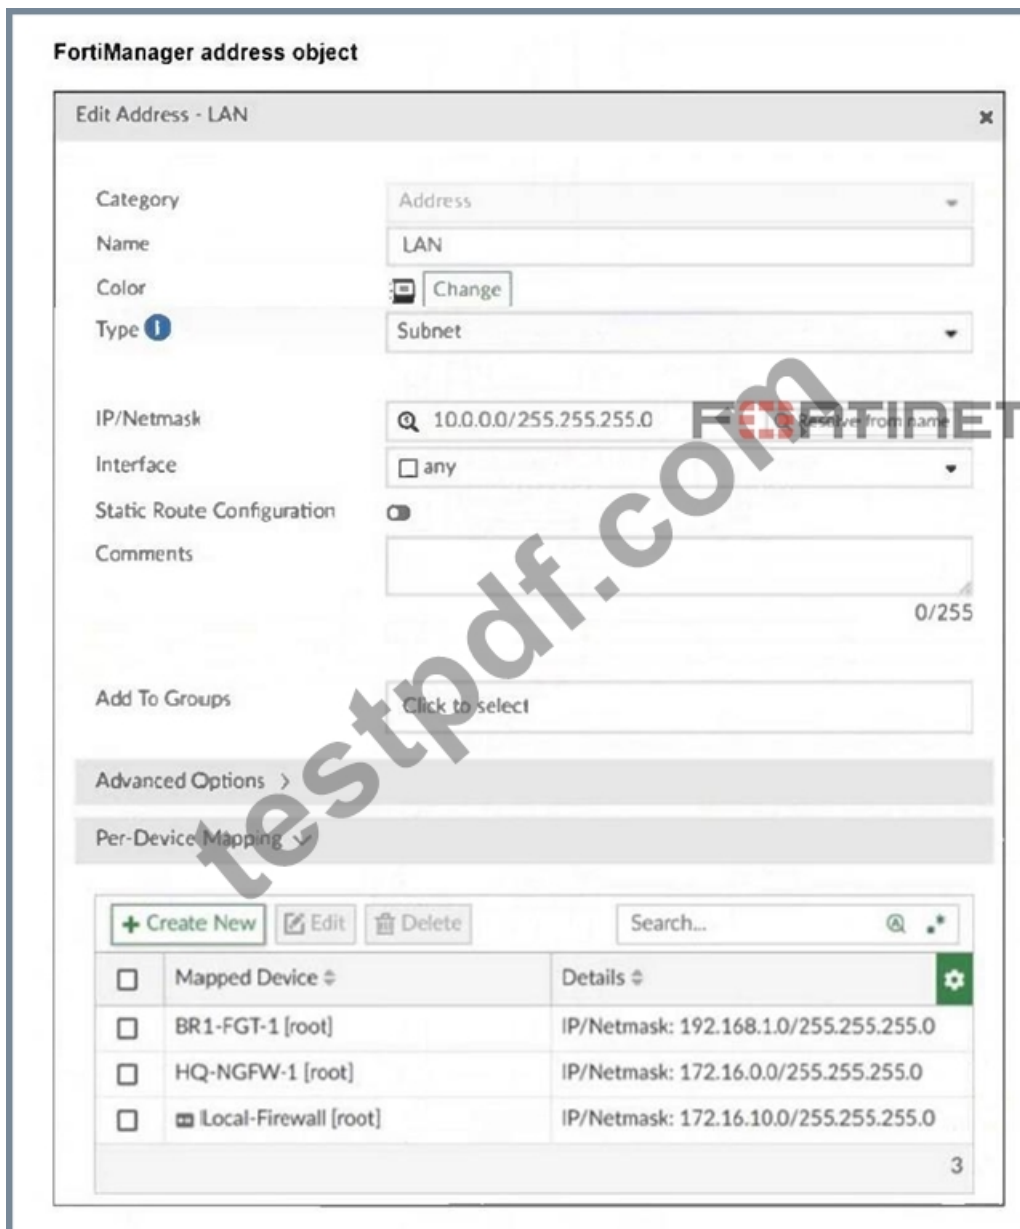

Connectivity

- Connection ... 2
- Model Device 2

Device Config...

- Synchronized 2
- Unknown 2

Device Name	Config Status	Provisioning Templates	Policy Package Status	Firmwa
BR1-FGT-1	✓ Synchronized	✓ default	BR1-FGT-1	FortiGa
HQ-NGFW-1	✓ Synchronized		✓ HQ-NGFW-1	FortiGa
Local-Firewall	⊗ Unknown		✓ Central	FortiGa
Remote-Firewall	⊗ Unknown		✓ Central	FortiGa

- A. 192.168.1.0/255.255.255.0
- B. 172.16.10.0/255.255.255.0
- C. 10.0.0.0/255.255.255.0
- D. 172.16.0.0/255.255.255.0

Answer: C

Explanation:

In FortiManager, the "Per-Device Mapping" section allows for overriding the default object value for specific devices. The Remote-Firewall is not listed in the Per-Device Mapping table.

Therefore, it will use the default value defined in the top portion of the address object, which is 10.0.0.0/255.255.255.0.

NEW QUESTION # 12

An administrator suspects that the Collector Agent is not forwarding login events to FortiGate. What is the most effective troubleshooting step?

- A. Restart the domain controller to refresh authentication services.
- B. Verify if FortiGate is set to use LDAP authentication instead of FSSO.
- C. Verify if DC agent is enabled on the FortiGate.

- **D. Check if TCP port 8000 is open between the collector agent and FortiGate.**

Answer: D

Explanation:

This point is not covered in the uploaded FortiManager 7.6 study guide , so the answer is based on Fortinet's official FSSO documentation. Fortinet documents that in FSSO Collector Agent deployments, the FortiGate connects to the Collector Agent on TCP port 8000 by default , and if a different port is not configured, that is the port that must be reachable. Fortinet also explains that the DC agents monitor user logon events and pass the information to the Collector Agent, which stores the information and sends it to the FortiGate .

So, when login events are not reaching FortiGate, the most effective first troubleshooting step is to verify connectivity on TCP 8000 between the Collector Agent and FortiGate. Options A, B, and C are less direct and do not test the actual transport path used by the Collector Agent to send FSSO information to FortiGate.

NEW QUESTION # 13

While attempting to push a NetFlow configuration script through the FortiManager policy package: an administrator encounters an error stating that an object is unrecognized in line 4.

```
Starting log (Run on database)
config vdom
edit AGEUSR
[line 4] > config sys interface [parameter(s) invalid. detail: object unrecognized]
Failed to commit to DB, reason{[line 4] > config sys interface [parameter(s) invalid. detail: object unrecognized]
Running script(NetFlow_Configuration) on DB failed
```

What must the administrator do to successfully apply the NetFlow configuration script and avoid the object unrecognized error?

- A. Create a normalized interface on the policy layer before running the script.
- B. Make sure the user running the script has full access to the VDOM-AGEUSR.
- **C. Run the script on the device database.**
- D. Use metadata variables if they use VDOMs in the script.

Answer: C

Explanation:

The correct answer is B . The error occurs because the script is being run on the policy package database , but the failing command is config sys interface, which is a device-level configuration command, not a policy- layer command. The lab guide gives the exact relationship: "Because the scripts target the device database, first, you will run the scripts against the device database, and then install the scripts on the managed devices" and "The scripts contain configuration changes related to device-level settings." By contrast, the lab guide shows Policy Package or ADOM Database scripts being used for firewall objects and policies in a policy package. So this NetFlow script must be run on the device database , then installed. The issue is not VDOM permissions, metadata variables, or normalized interfaces.

NEW QUESTION # 14

Refer to the exhibits. An administrator must replace the source LAN interface in policy ID 2 on their FortiGateRugged-70F. However, when they try to install the policy package, they receive the error shown in the exhibit.

What should the administrator do to resolve the error?

Installation log

View Install Log

```

Copy device global objects

validation error on firewall policy 2 in policy package "HQ-NGFW-1", by dynamic interface check

Vdom copy failed:
error 42 - entry not exist. detail: Dynamic interface "LAN" mapping undefined for device HQ-NGFW-1

Copy objects for vdom root
    
```

Normalized interface

Name	Mapping Rule	Mapped Interface/Zone	Description
LAN	Default	LAN	
lan	Per-platform (FortiGateRugged-70F)	lan	added by creating a
lan	Per-platform (FortiGateRugged-70F-3G4G)	lan	added by creating a
lan1	Per-platform (FortiGate-40F)	lan1	added by creating a
lan1	Per-platform (FortiGate-40F-3G4G)	lan1	added by creating a

lan2	Per-platform (FortiWiFi-40F-3G4G)	lan2	added by creating a

Firewall policy package

#	Name	From	To	Source	Destination	Schedule	Security Profiles
1	Internet	port4	port2	Internal	all	always	WEB default SSL no-inspection PROT default
2	FMG Administration	LAN	port6	all	VIP-FMG	always	SSL no-inspection
3	Internal FMG access	port4	port6	all	all	always	SSL no-inspection
4	FMG outside access	port6	port2	HQ-FMG-1	all	always	SSL no-inspection

- A. Replace LAN with lan1, which is supported by FortiGateRugged-70F models.
- B. Create a perdevice mapping for the LAN interface.

- C. Use a metadata variable to dynamically assign an interface when this error occurs.
- D. Use the API to assign a system template interface for FortiGateRugged-70F model.

Answer: B

Explanation:

The installation error clearly states that the dynamic interface mapping for "LAN" is undefined for device HQ-NGFW-1 (a FortiGateRugged-70F). In the "Normalized Interface" view, "LAN" is a normalized name, but FortiGateRugged-70F uses "lan1" as the actual interface. To resolve the conflict, the administrator must create a per-device mapping linking the normalized interface "LAN" to "lan1" for the FortiGateRugged-70F device. This allows FortiManager to properly translate the interface name during policy installation.

NEW QUESTION # 15

.....

In our software version of the FCP_FMG_AD-7.6 exam dumps, the unique point is that you can take part in the practice test before the real FCP_FMG_AD-7.6 exam. You never know what you can get till you try. It is universally acknowledged that mock examination is of great significance for those who are preparing for the exam since candidates can find deficiencies of their knowledge as well as their shortcomings in the practice test, so that they can enrich their knowledge before the Real FCP_FMG_AD-7.6 Exam.
