We provide Professional-Cloud-Developer exam torrent which are of high quality and can boost high passing rate and hit rate. Our passing rate of Professional-Cloud-Developer training guide is 99% and thus you can reassure yourself to buy our product and enjoy the benefits brought by our Professional-Cloud-Developer exam materials. Our Professional-Cloud-Developer Learning Engine is efficient and can help you master the Professional-Cloud-Developer guide torrent in a short time and save your energy. The Professional-Cloud-Developer exam material we provide is compiled by experts and approved by the professionals who boost profound experiences.

When preparing to take the Professional-Cloud-Developer exam dumps, knowing where to start can be a little frustrating, but with Google Professional-Cloud-Developer practice questions, you will feel fully prepared. Using our Professional-Cloud-Developer practice test Pass4guide, you can prepare for the increased difficulty on Professional-Cloud-Developer Exam day. Plus, we have various question types and difficulty levels so that you can tailor your Professional-Cloud-Developer exam dumps preparation to your requirements.

>> Professional-Cloud-Developer New Question <<

Exam Professional-Cloud-Developer Braindumps, Exam Professional-Cloud-Developer Duration

As a IT worker sometime you may know you will take advantage of new technology more quickly by farming out computer operations, we prefer to strengthen own strong points. Our Professional-Cloud-Developer test braindump materials is popular based on that too. As we all know the passing rate for IT exams is low, the wise choice for candidates will select valid Professional-Cloud-Developer test braindump materials to make you pass exam surely and fast. Professional handles professional affairs.

Google Certified Professional - Cloud Developer Sample Questions (Q158-

Q163):

NEW QUESTION # 158

Case Study

Company Overview

HipLocal is a community application designed to facilitate communication between people in close proximity. It is used for event planning and organizing sporting events, and for businesses to connect with their local communities. HipLocal launched recently in a few neighborhoods in Dallas and is rapidly growing into a global phenomenon. Its unique style of hyper-local community communication and business outreach is in demand around the world.

Executive Statement

We are the number one local community app; it's time to take our local community services global. Our venture capital investors want to see rapid growth and the same great experience for new local and virtual communities that come online, whether their members are 10 or 10000 miles away from each other.

Solution Concept

HipLocal wants to expand their existing service, with updated functionality, in new regions to better serve their global customers. They want to hire and train a new team to support these regions in their time zones. They will need to ensure that the application scales smoothly and provides clear uptime data.

Existing Technical Environment

HipLocal's environment is a mix of on-premises hardware and infrastructure running in Google Cloud Platform.

The HipLocal team understands their application well, but has limited experience in global scale applications.

Their existing technical environment is as follows:

- * Existing APIs run on Compute Engine virtual machine instances hosted in GCP.
- * State is stored in a single instance MySQL database in GCP.
- * Data is exported to an on-premises Teradata/Vertica data warehouse.
- * Data analytics is performed in an on-premises Hadoop environment.
- * The application has no logging.
- * There are basic indicators of uptime; alerts are frequently fired when the APIs are unresponsive.

Business Requirements

HipLocal's investors want to expand their footprint and support the increase in demand they are seeing. Their requirements are:

- * Expand availability of the application to new regions.
- * Increase the number of concurrent users that can be supported.
- * Ensure a consistent experience for users when they travel to different regions.
- * Obtain user activity metrics to better understand how to monetize their product.
- * Ensure compliance with regulations in the new regions (for example, GDPR).
- * Reduce infrastructure management time and cost.
- * Adopt the Google-recommended practices for cloud computing.

Technical Requirements

- * The application and backend must provide usage metrics and monitoring.
- * APIs require strong authentication and authorization.
- * Logging must be increased, and data should be stored in a cloud analytics platform.
- * Move to serverless architecture to facilitate elastic scaling.
- * Provide authorized access to internal apps in a secure manner.

HipLocal wants to reduce the number of on-call engineers and eliminate manual scaling.

Which two services should they choose? (Choose two.)

- A. Use a large Google Compute Engine cluster for deployments.
- **B. Use Knative to build and deploy serverless applications.**
- C. Use Google Kubernetes Engine for automated deployments.
- D. Use Google App Engine services.
- **E. Use serverless Google Cloud Functions.**

Answer: B,E

Explanation:

Explanation

NEW QUESTION # 159

Your App Engine standard configuration is as follows:

service: production

instance_class: B1

You want to limit the application to 5 instances. Which code snippet should you include in your configuration?

- A. manual_scaling:instances: 5min_pending_latency: 30ms
- B. basic_scaling:max_instances: 5idle_timeout: 10m
- C. basic_scaling:instances: 5min_pending_latency: 30ms
- D. manual_scaling:max_instances: 5idle_timeout: 10m

Answer: C

NEW QUESTION # 160

You have a container deployed on Google Kubernetes Engine. The container can sometimes be slow to launch, so you have implemented a liveness probe. You notice that the liveness probe occasionally fails on launch. What should you do?

- A. Increase the initial delay for the liveness probe.
- B. Add a startup probe.
- C. Increase the CPU limit for the container.
- D. Add a readiness probe.

Answer: A

Explanation:

<https://kubernetes.io/docs/tasks/configure-pod-container/configure-liveness-readiness-startup-probes/#configure-probes>

NEW QUESTION # 161

Your operations team has asked you to create a script that lists the Cloud Bigtable, Memorystore, and Cloud SQL databases running within a project. The script should allow users to submit a filter expression to limit the results presented. How should you retrieve the data?

- A. Use the HBase API, Redis API, and MySQL connection to retrieve database lists. Combine the results, and then apply the filter to display the results
- B. Use the HBase API, Redis API, and MySQL connection to retrieve database lists. Filter the results individually, and then combine them to display the results
- C. Run `gcloud bigtable instances list`, `gcloud redis instances list`, and `gcloud sql databases list`. Use `-filter` flag with each command, and then display the results
- D. Run `gcloud bigtable instances list`, `gcloud redis instances list`, and `gcloud sql databases list`. Use a filter within the application, and then display the results

Answer: C

Explanation:

<https://cloud.google.com/sdk/gcloud/reference/topic/filters>

Most `gcloud` commands return a list of resources on success. By default they are pretty-printed on the standard output. The `--format=NAME[ATTRIBUTES](PROJECTION)` and `--filter=EXPRESSION` flags along with projections can be used to format and change the default output to a more meaningful result.

Use the `--format` flag to change the default output format of a command. For details run `$ gcloud topic formats`.

Use the `--filter` flag to select resources to be listed. Resource filters are described in detail below.

NEW QUESTION # 162

You are in the final stage of migrating an on-premises data center to Google Cloud. You are quickly approaching your deadline, and discover that a web API is running on a server slated for decommissioning.

You need to recommend a solution to modernize this API while migrating to Google Cloud. The modernized web API must meet the following requirements:

- * Autoscales during high traffic periods at the end of each month
- * Written in Python 3.x
- * Developers must be able to rapidly deploy new versions in response to frequent code changes You want to minimize cost, effort, and operational overhead of this migration. What should you do?

- A. Modernize and deploy the code on App Engine standard environment.
- B. Deploy the modernized application to an n1-standard-1 Compute Engine instance.
- C. Modernize and deploy the code on App Engine flexible environment.
- D. Ask the development team to re-write the application to run as a Docker container on Google Kubernetes Engine.

Answer: A
