Exam ISTQB-CTFL Collection | Exam ISTQB-CTFL Discount

We are pleased to inform you that we have engaged in this business for over ten years with our ISTQB-CTFL exam questions. Because of our past years' experience, we are well qualified to take care of your worried about the ISTQB-CTFL Preparation exam and smooth your process with successful passing results. Our pass rate of the ISTQB-CTFL study materials is high as 98% to 100% which is unique in the market.

Appropriately, we can wrap up this post with the way that the test centers around the material that is essential to handily clear your ISTQB Certified Tester Foundation Level (CTFL v4.0) certification exam. You can trust the material and set aside an edge to zero in on those before you win eventually over the last ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam dates. To get it, find the source that assists you with getting the right test and spotlight on material agreeable for you for organizing the ISTQB Certified Tester Foundation Level (CTFL v4.0) exam.

Exam ISTQB-CTFL Discount & ISTQB-CTFL Reliable Cram Materials

If you ask how we can be so confident with our ISTQB-CTFL exam software, we will tell you that first our PassExamDumps is an experienced IT software team; second we have more customers who have pass ISTQB-CTFL exam with the help of our products. ISTQB-CTFL Exam Certification is international recognized, and do you want this authority certificate? Then, you will easily get the certification with the help of our ISTQB-CTFL exam software.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q161-Q166):

NEW QUESTION # 161
A mid-size software product development company has analyzed data related to defects detected in its product and found out that detects fixed in earlier builds are getting re-opened after a few months.
The company management now seeks your advice in order to reverse this trend and prevent re-opening of defects fixed earlier.
What would be your FIRST recommendation to the company?

- A. Automate existing test suits so that lesser time is spent on execution of each test, and more tests can be executed m the available time thus leading to a lower probability of defects slipping by
- B. If required, tram the teams responsible for development and testing of the modules containing maximum number of defects, and if this does not help, replace them with more knowledgeable people
- C. Analyze the product modules containing maximum defects, and get them thoroughly tested and defects fixed as a one-time activity
- D. Verify existing regression test suite are adequate, and augment it, if required, in order to ensure that defects fixed earlier get re-tested in each subsequent build

Answer: D

Explanation:
Regression testing is a type of testing that verifies that previously tested software still performs correctly after changes. Regression testing can help prevent re-opening of defects fixed earlier by ensuring that they do not cause any new failures or side effects. The first recommendation to the company is to verify existing regression test suite are adequate, and augment it, if required, in order to ensure that defects fixed earlier get re-tested in each subsequent build. This can help improve the coverage and effectiveness of regression testing and detect any regression defects as soon as possible. Automating existing test suites may also help reduce the time and effort required for regression testing, but this is not the first recommendation, as automation may not be feasible or cost-effective for all test cases. Analyzing the product modules containing maximum defects and getting them thoroughly tested and defects fixed as a one-time activity may also help reduce the defect density and improve the quality of those modules, but this is not the first recommendation, as it does not address the root cause of re-opening defects fixed earlier. Training or replacing the teams responsible for development and testing of the modules containing maximum number of defects may also help improve their skills or performance, but this is not the first recommendation, as it may not be necessary or appropriate for all teams. NEW QUESTION # 162
Which of the following are valid testing principles?
I) Exhaustive testing is in general impossible.
II) Exhaustive testing should be executed for code intended to be reused.
III) Testing may guarantee that a program is correct.
IV) Testing cannot guarantee that a program is correct.
V) Defects cluster together in certain areas of the product.

- A. I, IV, V
- B. I, Ill
- C. I, V
- D. II, Iv

Answer: A

Explanation:
Statements I, IV and V are valid testing principles according to the ISTQB syllabus. Statement I states that exhaustive testing is in general impossible, because it would require testing all possible inputs, outputs and combinations of states, which is usually impractical or impossible. Statement IV states that testing cannot guarantee that a program is correct, because testing can only show the presence of defects, not their absence.
Statement V states that defects cluster together in certain areas of the product, which means that some modules or functions are more likely to contain defects than others. Statements II and III are invalid testing principles. Statement II states that exhaustive testing should be executed for code intended to be reused, which contradicts statement I. Statement III states that testing may guarantee that a program is correct, which contradicts statement IV. NEW QUESTION # 163
In a two-hour uninterrupted test session, performed as part of an iteration on an Agile project, a heuristic checklist was used to help the tester focus on some specific usability issues of a web application.
The unscripted tests produced by the tester's experience during such session belong to which one of the following testing quadrants?

- A. Q2
- B. Q3
- C. Q1
- D. Q4

Answer: B

Explanation:
The unscripted tests produced by the tester's experience during the two-hour test session belong to the testing quadrant Q3. The testing quadrants are a classification of testing types based on two dimensions: the test objectives (whether the testing is focused on supporting the team or critiquing the product) and the test basis (whether the testing is based on the technology or the business). The testing quadrants are labeled as Q1, Q2, Q3, and Q4, and each quadrant represents a different testing perspective, such as unit testing, acceptance testing, usability testing, or performance testing. The testing quadrant Q3 corresponds to the testing types that have the objective of critiquing the product from the business perspective, such as exploratory testing, usability testing, user

acceptance testing, alpha testing, beta testing, etc. The unscripted tests performed by the tester in the given scenario are examples of exploratory testing and usability testing, as they are based on the tester's experience, intuition, and learning of the web application, and they focus on some specific usability issues, such as the user interface, the user satisfaction, the user feedback, etc. The other options are incorrect, because:

* The testing quadrant Q1 corresponds to the testing types that have the objective of supporting the team from the technology perspective, such as unit testing, component testing, integration testing, system testing, etc. These testing types are usually performed by developers or testers who have access to the source code, the design, the architecture, or the configuration of the software system, and they aim to verify the functionality, the quality, and the reliability of the software system at different levels of integration.
* The testing quadrant Q2 corresponds to the testing types that have the objective of supporting the team from the business perspective, such as functional testing, acceptance testing, story testing, scenario testing, etc. These testing types are usually performed by testers or customers who have access to the requirements, the specifications, the user stories, or the business processes of the software system, and they aim to validate that the software system meets the expectations and the needs of the users and the stakeholders.
* The testing quadrant Q4 corresponds to the testing types that have the objective of critiquing the product from the technology perspective, such as performance testing, security testing, reliability testing, compatibility testing, etc. These testing types are usually performed by testers or specialists who have access to the tools, the metrics, the standards, or the benchmarks of the software system, and they aim to evaluate the non-functional aspects of the software system, such as the efficiency, the security, the reliability, or the compatibility of the software system under different conditions or environments. NEW QUESTION # 164
Which of the following is a key characteristic of informal reviews?

- A. Metrics analysis
- B. Individual preparation
- C. Kick-off meeting
- D. Low cost

Answer: D

Explanation:
A key characteristic of informal reviews is low cost. Informal reviews are a type of review that does not follow a formal process or have any formal documentation. Informal reviews are usually performed by individuals or small groups of peers or colleagues who have some knowledge or interest in the product under review.
Informal reviews can be done at any time and for any purpose, such as checking for errors, clarifying doubts, sharing ideas, etc. Informal reviews have low cost, as they do not require much time, effort, or resources to conduct. The other options are not key characteristics of informal reviews. Kick-off meeting is a characteristic of formal reviews, such as inspections or walkthroughs. Kick-off meeting is a meeting that is held before the review process starts, where the roles and responsibilities of the participants are defined, the objectives and scope of the review are agreed, and the logistics and schedule of the review are planned. Individual preparation is a characteristic of formal reviews, such as inspections or walkthroughs. Individual preparation is an activity that is performed by the reviewers before the review meeting, where they examine the product under review and identify any issues or questions that need to be discussed or resolved during the review meeting. Metrics analysis is a characteristic of formal reviews, such as inspections or walkthroughs. Metrics analysis is an activity that is performed after the review process is completed, where the data and results of the review are collected and analyzed to measure the effectiveness and efficiency of the review, as well as to identify any improvement actions or lessons learned for future reviews. NEW QUESTION # 165
Which of the following is true about Oracles?

- A. Oracles are derived from the design
- B. Oracles can be generated automatically using data generators
- C. Sometimes old version of a product can be used as an Oracle
- D. Oracles help in reproducing the irreproducible bugs

Answer: C

Explanation:
An oracle is a mechanism or source that can provide the expected result for a given test input or situation.
Sometimes old version of a product can be used as an oracle, if it is assumed that the old version behaves correctly for the test cases that are executed on the new version. This is also known as back-to-back testing.
Oracles do not help in reproducing the irreproducible bugs, as they only provide the expected results, not the actual results. Oracles are not derived from the design, but from the requirements or specifications. Oracles cannot be generated automatically using data generators, as data generators only provide test inputs, not test outputs.
