## Plat-Dev-301 Test Practice | Plat-Dev-301 Certification Cost

simulation tests of our Plat-Dev-301 learning materials have the functions of timing and mocking exams, which will allow you to adapt to the exam environment in advance and it will be of great benefit for subsequent exams. After you complete the learning task, the system of our Plat-Dev-301 test prep will generate statistical reports based on your performance so that you can identify your weaknesses and conduct targeted training and develop your own learning plan. For the complex part of our Plat-Dev-301 Exam Question, you may be too cumbersome, but our system has explained and analyzed this according to the actual situation to eliminate your doubts and make you learn better.

## Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q26-Q31):

### NEW QUESTION # 26

A Visualforce page loads slowly due to the large amount of data it displays.

Which strategy can a developer use to improve the performance?

- A. Use the transient keyword for the List variables used in the custom controller.
- B. Use Javascript to move data processing to the browser instead of the controller.
- C. Use an <apex:actionPoller> in the page to load all of the data asynchronously.
- **D. Use lazy loading to load the data on demand, instead of in the controller's constructor.**

**Answer: D**

Explanation:

Lazy loading is a strategy to improve the performance of a Visualforce page that loads a large amount of data. By loading the data on demand, rather than in the controller's constructor, the initial page load is faster, and additional data is only loaded when necessary.

### NEW QUESTION # 27

The head of recruiting at Universal Containers (UC) wants to provide all internal users the ability to search for open positions by role, department, and location via a new recruiting app. In addition to search, users of the app should be able to refer a friend, apply for a position, and review the status of their current submissions.

The app will be surfaced to UC's existing iOS and Android users via the standard mobile app that Salesforce provides. It has a custom user interface design and offline access is not required.

Given these requirements, what is the recommended approach to develop the app?

- **A. Lightning Web Components**
- B. Salesforce SDK
- C. Lightning Experience Builder
- D. Visualforce

**Answer: A**

### NEW QUESTION # 28

An Apex class does not achieve expected code coverage. The testsetup method explicitly calls a method in the Apex class. How can the developer generate the code coverage?

- A. Call the Apex class method from a testsetup Instead of the testsetup method.
- **B. Add @testvisible to the method in the class the developer is testing.**
- C. Verify the user has permissions passing a user into System.runs().
- D. Use system.assert() in testSetup to verify the values are being returned.

**Answer: B**

Explanation:

When an Apex class does not achieve the expected code coverage, it suggests that the test methods are not executing parts of the class. The @testvisible annotation can be used to increase code coverage by allowing test methods to access private or protected members of another class. This enables the test method to call methods that may not be directly accessible, but it is not a direct means to generate code coverage. The code coverage is actually achieved when the test methods execute the code within these methods. Therefore, to properly generate code coverage, the developer must ensure that the test methods call the relevant portions of the code that need to be covered. The use of @testvisible can facilitate this process by making otherwise inaccessible code available for testing.

Apex Developer Guide - Testing Best Practices

Apex Developer Guide - @testVisible Annotation

### NEW QUESTION # 29

A company has an Apex process that makes multiple extensive database operations and web service callouts. The database processes and web services can take a long time to run and must be run sequentially.

How should the developer write this Apex code without running into governor limits and system limitations?

- A. Use multiple `Queueable` methods for each process and callout.
- B. Use `Limits` class to stop entire process once governor limits are reached.

- C. Use Apex Scheduler to schedule each process.
- **D. Use Queueable Apex to chain the jobs to run sequentially.**

**Answer: D**

Explanation:

Queueable Apex is suitable for complex processes that require chaining jobs to run sequentially. It can handle long-running processes without hitting governor limits, as each chained job runs in a new transaction with its own set of governor limits.

### NEW QUESTION # 30

A company has a web page that needs to get Account record information, such as name, website, and employee number. The Salesforce record ID is known to the web page and it uses JavaScript to retrieve the account information.

Which method of integration is optimal?

- A. SOAP API
- **B. REST API**
- C. Apex REST web service
- D. Apex SOAP web service

**Answer: B**

Explanation:

For retrieving specific records using a known ID, the REST API is optimal due to its stateless, cacheable communications and lightweight structure. It's ideal for web applications that use JavaScript to make requests directly from the user's browser. Using the REST API, the web page can make a simple HTTP GET request to the Salesforce REST service endpoint and retrieve the account information in a format that's easily handled by JavaScript (typically JSON).

REST API Developer Guide

### NEW QUESTION # 31

.....

With our outstanding Plat-Dev-301 exam questions, we can assure you a 99% percent pass rate. Due to continuous efforts of our experts, we have exactly targeted the content of the Plat-Dev-301 exam. You will pass the exam after 20 to 30 hours' learning with our Plat-Dev-301 Study Material. Many users have witnessed the effectiveness of our Plat-Dev-301 guide exam you surely will become one of them. Try it right now!

**Plat-Dev-301 Test Practice:** <https://www.lead2passed.com/Salesforce/Plat-Dev-301-practice-exam-dumps.html>

You will get original questions and verified answers for the Salesforce Plat-Dev-301 Test Practice certification, The validity and useful Plat-Dev-301 will clear your doubts which will be in the actual test, There are three versions of Plat-Dev-301 training dumps, you can buy any of them according to your preference or actual demand, Plat-Dev-301 training materials will be your efficient fool for your exam.

Exposé Spaces Rolled into Mission Control, Plat-Dev-301 Marketing methods have changed too, and while social media tools allow photographers to promote themselves in a variety of ways, Formal Plat-Dev-301 Test this has happened against a backdrop of increasing competition from all sides.
