

Latest Upload Valid HPE7-A06 Test Objectives - HP HPE7-A06 Valid Exam Prep: HPE Campus Access Switching Expert Written Exam

BTW, DOWNLOAD part of PassCollection HPE7-A06 dumps from Cloud Storage: https://drive.google.com/open?id=1Zmp8D_TmU5nulEh2cYDSWBn4RBDfR0sl

PassCollection is engaged in studying valid exam simulation files with high passing rate many years. If you want to find valid HP HPE7-A06 exam simulations, our products are helpful for you. Our HP HPE7-A06 Exam Simulations will assist you clear exams and apply for international companies or better jobs with better benefits in the near future.

We can provide you with a safety and efficiency shopping experience when you choose PassCollection HPE7-A06 test Camp Questions. You see, we use Paypal to do the payment, so the payment process is secured and your personal information is secret and protected. In addition, the payment process is very easy to operate. You will receive an email attached with HPE7-A06 study pdf after your payment in about 5-10 minutes, then you can start your study immediately.

HPE7-A06 Valid Exam Prep | HPE7-A06 Latest Practice Questions

Our HPE7-A06 study materials include all the qualification tests in recent years, as well as corresponding supporting materials. Such a huge amount of database can greatly satisfy users' learning needs. Not enough valid HPE7-A06 learning materials, will bring many inconvenience to the user, such as delay learning progress, reduce the learning efficiency eventually lead to the user's study achievement was not significant, these are not conducive to the user pass exam, therefore, in order to solve these problems, our HPE7-A06 Study Materials will do a complete summarize and precision of summary analysis.

HPE Campus Access Switching Expert Written Exam Sample Questions (Q121-Q126):

NEW QUESTION # 121

You have recently configured a switch for 802.1X authentication with HPE Aruba Networking ClearPass. A security admin is seeing events with the following description in ClearPass Event Viewer.

RADIUS authentication attempt from unknown NAD (10.10.1.10:1812)

Which command should you use to identify the configuration issue?

- A. show radius-server shared-secret
- B. show aaa authentication-server radius
- C. show radius-server detail
- D. show ip source-interface radius

Answer: D

Explanation:

The ClearPass Event Viewer message "RADIUS authentication attempt from unknown NAD (10.10.1.10:1812)" indicates that ClearPass received a RADIUS request from the IP address 10.10.1.10, but this IP is not configured as a trusted Network Access Device (NAD) in ClearPass's network device list, or the shared secret doesn't match. The first step in troubleshooting on the switch side is to verify which source IP address the switch is actually using to send these RADIUS requests.

* RADIUS Source IP:AOS-CX switches can be configured to use a specific source IP address for RADIUS packets, often using the ip source-interface radius [vrf <vrf-name>] command. This is important if the switch has multiple IP interfaces or uses VRFs.

* Analysis of Commands:

* A. show ip source-interface radius: This command directly displays the configured source interface and IP address used for RADIUS communications, allowing comparison with the IP configured in ClearPass.

* B. show aaa authentication-server radius: Shows server group configuration, not the source IP used by the switch.

* C. show radius-server shared-secret: Not a standard command; secrets are usually masked in other commands.

* D. show radius-server detail: Shows configured RADIUS server details but doesn't explicitly show the source IP the switch is using to originate packets.

* Conclusion: To identify why ClearPass sees requests from an "unknown NAD" IP (10.10.1.10), the first step on the switch is to confirm which source IP it's using. show ip source-interface radius provides this crucial information.

References: AOS-CX Security Guide (RADIUS Client Configuration, ip source-interface), ClearPass Documentation (NAD Configuration). This relates to "Authentication/Authorization" (9%) and "Troubleshooting" (10%) objectives.

NEW QUESTION # 122

A customer wants to deploy IoT security devices that are PoE-powered. Due to its criticality, it is required that those devices remain active even during a switch software upgrade. What is a valid solution to meet customer requirements?

- A. power-over-ethernet always-on
- B. a VSX pair of switches for redundancy
- C. power-over-ethernet quick-poe
- D. power-over-ethernet priority

Answer: A

Explanation:

The question involves a customer deploying PoE-powered IoT security devices (e.g., door locks) that must remain active during an AOS-CX switch software upgrade. The task is to identify a valid solution.

* Analysis of Options:

* Option A: Incorrect. A VSX pair provides redundancy but does not guarantee PoE continuity during a single switch's upgrade.

* Option B: Incorrect. quick-poe reduces PoE startup time but does not ensure power during upgrades.

* Option C: Correct. power-over-ethernet always-on ensures PoE remains active during software upgrades, meeting the requirement.

* Option D: Incorrect. PoE priority adjusts power allocation but does not guarantee continuity during upgrades.

* Why Option C is Correct: The power-over-ethernet always-on feature on AOS-CX switches ensures that PoE power delivery continues uninterrupted during software upgrades or reboots, critical for devices like IoT security door locks that require constant power. This feature prevents power cycling on PoE ports, maintaining device operation. For example, enabling it on relevant ports (e.g., interface 1/1/1 power-over-ethernet always-on) ensures compliance with the customer's requirement, as per HPE Aruba Networking's PoE high-availability guidelines.

* Relevance to Certification Objectives:

* Connectivity (9%): Configuring PoE for critical device deployment.

* Network Resiliency and Virtualization (8%): Ensuring device uptime during maintenance.

* Troubleshooting (10%): Resolving PoE continuity issues.

NEW QUESTION # 123

Drag and Drop Question

Match the AOS-CX switch BGP keepalive and holddown timers to the default.

Answer:

Explanation:

Explanation:

Keepalive timer: 60 seconds (interval for sending keepalive messages).

Holddown (Hold) timer: 180 seconds (maximum time to wait before declaring a neighbor down if no keepalives are received).

NEW QUESTION # 124

To ensure device redundancy in an HPE Campus Access network, which configurations should be applied?

- A. DHCP Snooping
- **B. Link Aggregation**
- C. Active-Active Failover
- **D. VRRP**

Answer: B,D

NEW QUESTION # 125

Which feature is supported on Ethernet Ring Protocol Switching (ERPS) ports?

- A. ISL
- B. MLAG
- **C. loop-protect**
- D. MVRP

Answer: C

Explanation:

ERPS (Ethernet Ring Protection Switching) already provides loop avoidance in a ring topology, but it still supports loop-protect on its ports. Loop-protect helps detect and prevent accidental bridging loops outside the ERPS control plane. Other features like ISL, MVRP, or MLAG are not supported on ERPS ring ports.

NEW QUESTION # 126

.....

The contents of HPE7-A06 test questions are compiled strictly according to the content of the exam. The purpose of our preparation of our study materials is to allow the students to pass the exam smoothly. HPE7-A06 test questions are not only targeted but also very comprehensive. Although experts simplify the contents of the textbook to a great extent in order to make it easier for students to learn, there is no doubt that HPE7-A06 Exam Guide must include all the contents that the examination may involve. We also hired a dedicated staff to constantly update HPE7-A06 exam torrent. With HPE7-A06 exam guide, you do not need to spend money on buying any other materials. During your preparation, HPE7-A06 exam torrent will accompany you to the

end.
