

Valid SAP C_S43 Exam Objectives - Latest Test C_S43 Experience

At the moment when you decided to choose our SAP C_S43 real dumps, we feel the responsibility to be with you during your journey to prepare for the C_S43 exam. So we clearly understand our duty to offer help in this area. If you have any question, you can just contact our online service, they will give you the most professional advice on our SAP C_S43 Exam Guide.

SAP C_S43 Exam Syllabus Topics:

Section	Weight	Objectives
		- Enterprise Structure
Topic 1: Organizational Units and Master Data	11% - 20%	1. Manage work centers 2. Maintain asset management master data 3. Configure plants and planning plants
		- Maintenance Planning
Topic 2: Preventive Maintenance	11% - 20%	1. Schedule preventive maintenance 2. Generate maintenance orders automatically 3. Create maintenance plans
		- Maintenance Notifications
Topic 3: Maintenance Processing - Basic Functions	11% - 20%	1. Execute corrective maintenance 2. Manage maintenance orders 3. Create and process maintenance notifications
		- Equipment and Functional Locations
Topic 4: Technical Objects	11% - 20%	1. Manage equipment master data 2. Configure functional locations 3. Define object hierarchies
		- Clean Core Principles
Topic 5: Managing Clean Core	10% or less	1. Use standard extensibility options 2. Apply SAP clean core methodology 3. Maintain upgrade readiness

- Advanced Maintenance Scenarios

Topic 6: Maintenance Processing - Advanced Functions 11% - 20%

- 1. Handle resource scheduling
- 2. Manage complex maintenance workflows
- 3. Integrate maintenance with logistics

- SAP Fiori Applications

Topic 7: User Interface and User Experience

10% or less

- 1. Manage role-based applications
- 2. Use SAP Fiori launchpad
- 3. Optimize user experience

Authoritative SAP Valid C_S43 Exam Objectives | Try Free Demo before Purchase

The C_S43 certification verifies that you are a skilled professional. GuideTorrent product is designed by keeping all the rules and regulations in focus that SAP publishes. Our main goal is that you can memorize the actual SAP C_S43 Exam Question to complete the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43) test in time with extraordinary grades.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q11-Q16):

NEW QUESTION # 11

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

* Display the automatically created Inspection Lot

* Record Inspection Results

* Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:

Field	Value
Material	T-PM1100
Plant	1010
Inspection Lot Origin	89 Miscellaneous
Group	CL-DE-00
Group Counter	1

* Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- * Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- * Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- * Verify the Following Data :
- * Material : T-PM1100
- * Plant : 1010
- * Inspection Lot Origin : 89 (Miscellaneous)
- * Group : CL-DE-00
- * Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

* Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).

* Select the Lot : Enter your inspection lot number and click Execute .

* Record Results :

* Enter the inspection values for each characteristic listed in the checklist.

* Ensure the values you enter are within the "Acceptable" range or marked as "Pass".

* Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .

* Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

NEW QUESTION # 12

In the following assessment you will slip into the role of a consultant implementing SAP S/4HANA Asset Management OnPrem/Private Cloud for Machine Manufacturing Inc. . You need to fulfill various system tasks to setup certain business processes and test them.

Note:

In the task descriptions is no information provided if and/or how Asset Management specific customizing settings need to be adapted. This is an implicit part of the exam.

Note:

There is no information provided which UI to use when creating the data in the system e.g. SAP GUI, SAP Fiori Launchpad. This is an implicit part of the exam.

Your performance in each exercise will be evaluated to produce an overall score that determines a pass or fail for the exam. Please read every exercise carefully and enter any data exactly as requested without alteration. Some input data is provided in tables or in the task descriptions, however your input data is not limited to these parameters.

Use the following Logon information for all tasks:

System	User Name / ID	Password
T41 400	S43900-## 	Welcome1

Caution:

Please make sure you are always using your assigned group number (denoted as ## in the following) .

Your results will not be recorded if you are not using your own group number.

For example, if your group number is 10 i.e. (## = 10), your user will be S43900-10.

To find your group number: Click the Access button on the practice system details page. You will find your group number displayed beneath the "Get started" header in the pop-up window. Alternatively, in your Windows Terminal Server, choose the Windows button in the lower left corner. The Start Menu opens. In its upper left corner, choose the Expand icon (three white lines). Find your user name next to the user icon on the left side of the menu - the last two digits of the user name are your group number ##.

Note:

To access your backend system in the Windows Terminal Server, open the SAP Logon application and start the T41 system (Client 400). You can access the SAP Fiori Launchpad from the SAP Menu in T41. Always work with user S43900-## in order to have the required roles in place for your tasks.

Caution:

To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and stay within your allocated resources to help maintain a stable and

efficient environment for everyone and to ensure your data is evaluated properly.

Note:

In the following, you will be asked to create new transaction data, among others. If you are asked to create one specific new transaction data object, and - for whatever reason - you create more than one of that kind, SAP will evaluate your newest version only. For example: if you are asked to create a Maintenance Order of a specific Order Type in an exercise and you create three different Maintenance Orders of a specific Order Type, only your order with the highest order number will be evaluated.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task Objective

In this assessment, you assume the role of a consultant implementing SAP S/4HANA Asset Management for Machine Manufacturing Inc. . Your goal is to set up and test specific business processes through various system tasks.

Step 1: Identify Your Assigned Group Number (##)

This is the most critical step, as your results will only be recorded if you use your specific group number, denoted as ## in all instructions.

How to find your number:

* Method A: Click the Access button on the practice system details page; your group number is displayed beneath the "Get started" header.

* Method B: In the Windows Terminal Server, click the Windows button (Start Menu), select the Expand icon (three white lines), and find your user name next to the user icon. The last two digits of that name are your group number.

Step 2: Access the System

You must use the specific credentials provided to ensure you have the required roles for the assessment.

Logon Credentials:

* System : T41

* Client : 400

* User Name/ID : S43900-## (e.g., if your group number is 10, use S43900-10)

* Password : Welcome1

Connection Methods:

* SAP GUI : Open the SAP Logon application in the Windows Terminal Server and start the T41 system (Client 400).

* SAP Fiori Launchpad : This can be accessed directly from the SAP Menu within the T41 system.

Step 3: Understand Implicit Exam Rules

The assessment does not provide exhaustive instructions; certain technical decisions are considered part of the exam.

* Customizing : You must determine if and how specific Asset Management customizing settings need to be adapted.

* User Interface : You are free to choose between the SAP GUI or SAP Fiori Launchpad to create data, as the instructions do not specify which to use.

* Data Accuracy : Enter all data exactly as requested in the tables or descriptions without any alterations.

Step 4: Evaluation of Transaction Data

If you are asked to create a specific transaction object (like a Maintenance Order) and you create multiple versions, the system will only evaluate the newest version (the one with the highest identifying number).

Caution : To ensure your data is evaluated properly and to maintain system stability, stay strictly within the scope of the assigned exercises and your allocated resources.

Schedule a Maintenance Plan

The project team evaluates during the implementation project the scheduling of Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Schedule a Maintenance Plan

Display a generated Maintenance Order

Schedule the previously created Maintenance Plan. The following prerequisites have to be met:

The next upcoming call is the 4 MON Maintenance Package

Calculate the Completion Date of the last Maintenance Package as follows: Today's date minus 4 weeks (e.g.

today's date: 15th of December >>> Completion Date: 17th of November) The Call Date is always 10 days before the Plan Date.

Note:

Check your Maintenance Plan and adapt it, if necessary, before you schedule it.

Check the following information in the generated Maintenance Order:

number of order operations: 2

Maintenance Plan: number of the previously created Maintenance Plan

Last Included Task List: A / TL-## / 1

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 9 Overview

The goal of this task is to trigger the maintenance schedule you built in Task 8 so that the system generates an actual work order.

You must meet specific scheduling conditions to ensure the right maintenance cycle (the 4- month package) is triggered.

Step 1: Adapt Scheduling Parameters (IP02)

Before starting the schedule, you must ensure the "Call Date" rules are correct.

- * Transaction : Enter IP02 (Change Maintenance Plan).

- * Maintenance Plan : Enter the number you saved in Task 8 and press Enter .

- * Scheduling Parameters Tab :

- * Call Horizon : Adjust this so that the Call Date occurs exactly 10 days before the Plan Date.

- * Note: If your system uses percentages, you will need to calculate the percentage of the 4-month cycle that results in a 10-day lead time.

- * Save your changes.

Step 2: Schedule the Plan (IP10)

Now you will "start" the clock for this maintenance schedule.

- * Transaction : Enter IP10 (Schedule Maintenance Plan).

- * Maintenance Plan : Enter your plan number and press Enter .

- * Start Scheduling : Click the Start icon (or go to Maintenance plan > Scheduling > Start).

- * Enter the "Start Date" / "Completion Date" :

- * The Rule : You must use Today's date minus 4 weeks .

- * Example: If today is April 19, enter March 22.

- * Press Enter . The system will calculate the next calls.

- * Verify the Package : Ensure the next upcoming call is indeed the 4 MON (4-month) Maintenance Package.

- * Save (Floppy Disk icon). This will generate a new Maintenance Order number.

Step 3: Verify the Generated Maintenance Order

You must now check that the order was created correctly based on the rules of your Task List (Task 7) and Maintenance Plan (Task 8).

- * Display Order : In IP10 , select the line for the generated call and click the Display Order icon (or use transaction IW33 with the new order number).

- * Check the following three items :

- * Operations : Verify there are exactly 2 operations in the order (the Monthly and 4-Month tasks).

- * Maintenance Plan : Confirm the order shows your specific Maintenance Plan number.

- * Task List : Verify the "Last Included Task List" is A / TL-48 / 1 .

NEW QUESTION # 14

Task: 5

Configure and create a Maintenance Notification

The project team evaluates during the implementation project the Maintenance Notifications in SAP S/4HANA Asset Management. The following features need to be checked:

- * Configure and create a Maintenance Notification

- * Assign catalog specific data to a Maintenance Notification
- * Create a Maintenance Notification and save it. Use the following information:

Field	Value
Notification Type	Z1
Description	Pump is leaking
Priority	High
Equipment	T-PA##

- * Assign the following data to the just created notification:

Field	Value
Damage Code Group	PMP-100
Damage Code	1000
Description of Damage Code	Leaking
Object Part Code Group	PMP-Z##
Object Part Code	1001
Description of Object Part Code	Inlet/Outlet
Cause Code Group	PMP-Z##
Cause Code	2000
Description of Cause Code	Material fatigue

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 5 Overview

The project team is evaluating Maintenance Notifications in SAP S/4HANA Asset Management. This task involves creating a notification and assigning catalog-specific data to it.

Step 1: Create the Maintenance Notification

In this step, you will record a technical problem in the system.

* Access the Transaction : Use transaction code IW21 (Create Maintenance Notification) in the SAP GUI or the corresponding Fiori app.

* Initial Screen :

* Notification Type : Enter Z1 .

* Press Enter .

* Enter General Data :

* Description : Enter Pump is leaking .

* Priority : Select High .

* Equipment : Enter T-PA48 .

* Save : Click the Save (floppy disk) icon to generate a notification number.

Explanation : Creating a notification is the first step in the maintenance process. It documents the "what" (leaking pump), the "how critical" (high priority), and the "where" (Equipment T-PA48).

Create PM Notification: Maintenance Request

Notification: 40000000001 Z1
 Notific. Status: OSNO
 Order:

Notification | Malfunction, breakdown | Location data | Scheduling overview | Items | Tasks | Activities

Reference Object
 Functional loc.:
 Equipment:
 Assembly:

Subject
 Coding:
 Description:

Responsibilities
 Planner Group: /
 Main WorkCtr: /
 Reported By: Notif. Date: 02.04.2026 02:35:00

Start/End Dates
 Required Start: 02.04.2026 02:35:00 Priority:
 Required End: 00:00:00 Breakdown:
 Revision:
 Maint. Act. Type:
 Final Due Date:

Step 2: Assign Catalog Specific Data

Now you must assign technical codes to describe the damage precisely for future reporting and analysis.

* Access the Transaction : Use transaction code IW22 (Change Maintenance Notification) to open your recently created notification.

* Navigate to Item Data : Go to the Items tab or the relevant section for damage and causes.

* Enter Damage Details :

* Damage Code Group : PMP-100 .

* Damage Code : 1000 .

* Description : Leaking .

* Enter Object Part Details :

* Object Part Code Group : PMP-Z48 .

* Object Part Code : 1001 .

* Description : Inlet/Outlet .

* Enter Cause Details :

* Cause Code Group : PMP-248 .

* Cause Code : 2000 .

* Description : Material fatigue .

* Save : Click the Save icon to finalize the notification.

Explanation : Assigning catalog data categorizes the issue using standardized codes. This allows the company to run "Bad Actor" reports later to see, for example, how many pumps are failing due to "Material fatigue" versus "Operator error".

The screenshot shows the SAP PM Notification: Maintenance Request interface. The title bar reads "Create PM Notification: Maintenance Request". Below the title bar, there are input fields for "Notification" (00000000001), "Notification Status" (OSNO), and "Order". A tabbed menu at the top includes "Notification", "Malfunction, Breakdown", "Location Data", "Scheduling Overview", "Items", "Tasks", and "Activities". The "Items" tab is selected, showing a section for "For Item 1" with details for Object Part (PMP-100, 1001 Inlet/Outlet), Damage (PMP-100, 1000 Leaking), and Text (Leaking). Below this is a table titled "Causes for Item" with columns: No., Code Gr..., Ca..., Cause Code Text, Cause Text, C..., Created By, Created On, Cr..., Changed By, Changed On, Fm..., C Ca..., and Item. The first row of the table has values: PMP-100, 2000, [empty], [empty], [empty], [empty], [empty], [empty], [empty], [empty], [empty], [empty], [empty]. A large blue triangle with the word "SAP" in white is overlaid on the bottom right corner.

NEW QUESTION # 15

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

Field	Value
Maint. Plan cat. (via SAP GUI) Maintenance Plan for (via FLP)	Maintenance Order
Maintenance Strategy	Z##
Description	Regular pump maintenance - Z##
Equipment	T-PA##
Order Type	PM02
Task List Type	A
Group	TL-##
Counter	1

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

* Transaction Code : Enter IP42 in the command field and press Enter .

* Initial Screen :

* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

* Maintenance Strategy : Enter Z48 .

* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

* Description : Enter Regular pump maintenance Z48 .

* Equipment : Enter T-PA48 .

* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

* Look for the Task List section at the bottom of the screen.

* Task List Type : Enter A (General Task List).

* Group : Enter TL-48 .

* Counter : Enter 1 .

* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

* Click the Save (floppy disk) icon.

* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

NEW QUESTION # 16

.....

The passing rate of our C_S43 study materials is 99% and the hit rate is also high. Our study materials are selected strictly based on the real C_S43 exam. Our expert team guarantees that each answer and question is useful and valuable. We also update frequently to guarantee that the client can get more learning C_S43 resources and follow the trend of the times. So if you use our study materials you will pass the test with high success probability.
