Known Knowns represent threats that have already been identified, understood, and documented. Analysts in this stage work with existing data to refine and interpret known indicators or threat actor behaviors.
Why the Other Options Are Incorrect:
* Unknown unknowns: Threats that are entirely unknown and undetectable with current knowledge.
* Known unknowns: Threats suspected to exist but not yet clearly identified.
* Unknown knowns: Information that exists but has not been analyzed or recognized as relevant.
Conclusion:
Michael is analyzing existing and understood threat data, placing him in the Known Knowns stage of cyber- threat intelligence.

NEW QUESTION # 83
Tim is working as an analyst in an ABC organization. His organization had been facing many challenges in converting the raw threat intelligence data into meaningful contextual information. After inspection, he found that it was due to noise obtained from misrepresentation of data from huge data collections. He needs to choose an appropriate threat intelligence framework that automatically performs data collection, filtering, and analysis for his organization.
Which of the following threat intelligence frameworks should he choose to perform such task?

* How the organization might be attacked?
* Who might be the intruders? Identify the type of security testing John is going to perform.

- A. Black box testing
- B. Intelligence-led security testing
- C. White box testing

Answer: B

The focus of John's testing is understanding the motives, methods, and identity of potential attackers. This type of approach aligns with Intelligence-Led Security Testing.
Intelligence-Led Security Testing uses real-world threat intelligence to simulate realistic cyberattack scenarios. It provides insight into adversary behavior, motivations, and techniques, helping organizations assess their resilience against targeted threats.
Such testing answers the why, how, and who questions of potential attacks and is used to validate security controls based on threat actor profiles and campaigns.
Why the Other Options Are Incorrect:
* A. White box testing: The tester has full knowledge of systems and configurations; it focuses on internal vulnerabilities, not adversary motives.
* C. Black box testing: The tester has no prior knowledge of the system; it focuses on external attacks, not on intelligence-driven insights about attackers.
Conclusion:
John is performing Intelligence-Led Security Testing, which combines threat intelligence with security assessment to evaluate real-world risks.
