Salesforce Certified OmniStudio Developer Sample Questions (Q81-Q86):

NEW QUESTION # 81

A developer is building an OmniScript and needs to retrieve data from Salesforce and from an on-premises billing database. Which two OmniScript elements could retrieve this data?

Choose 2 answers

- A. DataRaptor Extract Action
- B. HTTP Action
- C. Navigate Action
- D. Response Action

Answer: A,B

Explanation:

According to the OmniScript Action Elements page, a DataRaptor Extract Action can be used to "get data from one or more Salesforce records" and an HTTP Action can be used to "get, save, or delete data through a web application programming interface (API)".

NEW QUESTION # 82

In an Integration Procedure, a developer needs to perform a multi-step calculation on every element of an array.

Based on best practices, what two methods are recommended?

Choose 2 answers

- A. Use a List Action to merge the array elements together.
- B. Use an Expression Set Action to call an Expression Set.
- C. Use a Set Values Element inside a Loop Block.
- D. Use a Decision Matrix Action to call a Decision Matrix.

Answer: B,C

Explanation:

A Set Values Element inside a Loop Block can be used to perform a calculation on each element of an array and store the result in a variable. An Expression Set Action can be used to call an Expression Set that contains one or more expressions to perform calculations on array elements. These two methods are recommended based on best practices for performing multi-step calculations on array elements.

NEW QUESTION # 83

A company wants to allow agents to send customers a quote for signature. The quote is a document created using a DocuSign template that has been prefilled with all of the quote details. The document will be emailed to one or more recipients for signature. How should a developer configure this functionality in OmniScript?

- A. PDF Acwm
- B. DocuSign Signature Action
- C. DocuSign Envelope Action
- D. Email Action

Answer: C

Explanation:

Explanation

A DocuSign Envelope Action can be used to create and send a document for signature using a DocuSign template. The developer can specify the template ID, recipient details, and prefill data in the action configuration

NEW QUESTION # 84

A developer configures a FlexCard with a DataRaptor data source that uses the params.id as an. When the developer clicks Views Data on the FlexCard, valid data displays. However, when the developer previews the layout, the FlexCard does not display. What could cause this error?

Choose 2 answers

- A. There is not Salesforce record for the FlexCard based on the RecordId in the layout's Test Data Source Settings.
- B. The Data Node field for the FlexCard is empty.
- C. The RecordId in the Test Data Source settings is for the wrong record type.
- D. The attribute hasn't been configured to pass the data to the fields.

Answer: A,B

Explanation:

Explanation

The Data Node field for the FlexCard is required to specify which data source will be used to populate the FlexCard. If it is empty, the FlexCard will not display any data. The Record Id in the Test Data Source settings is used to preview the layout with a specific record. If there is no Salesforce record for that Record Id, the FlexCard will not display any data either.

NEW QUESTION # 85

You are building a DataRaptor Load for an Integration Procedure used in an OmniScript. Based on best practices, how should you configure the Input JSON?

- A. Build the Input JSON node by node in an editor.
- B. Build the Input JSON node by node in the DataRaptor Designer.
- C. Copy the Input JSON from the OmniScript {Data} modal.
- D. Copy the Input JSON from the DataRaptor Action Debug node.

Answer: C

NEW QUESTION # 86

.....
