#### 問題 #24

Refer to the exhibits.

A customer wants to deploy 12 FortiAP 431F devices on high density conference center, but they do not currently have any PoE switches to connect them to. They want to be able to run them at full power while having network redundancy From the FortiSwitch models and sample retail prices shown in the exhibit, which build of materials would have the lowest cost, while fulfilling the customer's requirements?

- A. 2x FortiSwitch 248E-FPOE
- B. 1x FortiSwitch 248EFPOE
- C. 2x FortiSwitch 124E-FPOE
- D. 2x FortiSwitch 224E-POE

答案： C

解題說明：

the access point will require about 24.5 W of power and the 124E-FPOE has a Capacity of about 370 meaning  $25 \times 12 = 300$  so you left with about 70 W on the switch meaning you can still add two more access point on that switch.

#### 問題 #25

Refer to the exhibit showing a FortiSOAR playbook.

You are investigating a suspicious e-mail alert on FortiSOAR, and after reviewing the executed playbook, you can see that it requires intervention.

What should be your next step?

- A. Run the Mark Drive by Download playbook action
- B. Reply to the e-mail with the requested Playbook action
- C. Click on the notification icon on FortiSOAR GUI and run the pending input action
- D. Go to the Incident Response tasks dashboard and run the pending actions

答案： D

解題說明：

The exhibited playbook requires intervention, which means that the playbook has reached a point where it needs a human operator to take action. The next step should be to go to the Incident Response tasks dashboard and run the pending actions. This will allow you to see the pending actions that need to be taken and to take those actions.

The other options are not correct. Option B will only show you the notification icon, but it will not allow you to run the pending input action. Option C will run the Mark Drive by Download playbook action, but this is not the correct action to take in this case. Option D is not a valid option.

Here are some additional details about pending actions in FortiSOAR:

Pending actions are actions that need to be taken by a human operator.

Pending actions are displayed in the Incident Response tasks dashboard.

Pending actions can be run by clicking on the action in the dashboard.

### 問題 #26

A remote IT Team is in the process of deploying a FortiGate in their lab. The closed environment has been configured to support zero-touch provisioning from the FortiManager, on the same network, via DHCP options. After waiting 15 minutes, they are reporting that the FortiGate received an IP address, but the zero-touch process failed.

The exhibit below shows what the IT Team provided while troubleshooting this issue:

Which statement explains why the FortiGate did not install its configuration from the FortiManager?

- A. The DHCP server used the incorrect option type for the FortiManager IP address.
- B. The FortiGate was not configured with the correct pre-shared key to connect to the FortiManager
- C. The DHCP server was not configured with the FQDN of the FortiManager
- **D. The configuration was modified on the FortiGate prior to connecting to the FortiManager**

答案: D

### 問題 #27

Refer to the exhibits.

A FortiGate cluster (CL-1) protects a data center hosting multiple web applications. A pair of FortiADC devices are already configured for SSL decryption (FAD-1), and re-encryption (FAD-2). CL-1 must accept unencrypted traffic from FAD-1, perform application detection on the plain-text traffic, and forward the inspected traffic to FAD-2.

The SSL-Offload-App-Detect application list and SSL-Offload protocol options profile are applied to the firewall policy handling the web application traffic on CL-1.

Given this scenario, which two configuration tasks must the administrator perform on CL-1? (Choose two.) A)

B)

C)

- A. Option D
- B. Option A
- **C. Option B**
- **D. Option C**

答案: C,D

解題說明:

To enable application detection on plain-text traffic that has been decrypted by FortiADC, the administrator must perform two configuration tasks on CL-1:

Enable SSL offloading in the firewall policy and select the SSL-Offload protocol options profile.

Enable application control in the firewall policy and select the SSL-Offload-App-Detect application list. Reference:

### 問題 #28

Refer to the exhibit.

A customer has deployed a FortiGate 300E with virtual domains (VDMs) enabled in the multi-VDM mode. There are three VDMs: Root is for management and internet access, while VDM 1 and VDM 2 are used for segregating internal traffic.

AccountVlnk and SalesVlnk are standard VDM links in Ethernet mode.

Given the exhibit, which two statements below about VDM behavior are correct? (Choose two.)

- A. Root VDM is an Admin type VDM, while VDM 1 and VDM 2 are Traffic type VDMs.
- B. The VDM links are in Ethernet mode because they have IP addresses assigned on both sides.
- C. OSPF routing can be configured between VDM 1 and Root VDM without any configuration changes to AccountVlnk
- **D. Traffic on AccountVlnk and SalesVlnk will not be accelerated.**
- **E. You can apply OSPF routing on the VDM link in either PPP or Ethernet mode**

答案: D,E
