Cisco 800-150 certifications are thought to be the best way to get good jobs in the high-demanding market. There is a large range of 800-150 certifications that can help you improve your professional worth and make your dreams come true. Our Supporting Cisco Devices for Field Technicians 800-150 Certification Practice materials provide you with a wonderful opportunity to get your dream certification with confidence and ensure your success by your first attempt.

Cisco 800-150 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cisco Software: This section of the exam measures the skills of a Network Engineer and discusses Cisco's software systems and licensing. It explains the difference between IOS install and bundle modes and gives an overview of different licensing models. Students learn how to manage Cisco software images, including backing up, transferring, and installing images via FTP, TFTP, or USB. It also covers how to handle configuration files to keep devices running properly and ensure smooth upgrades or replacements.

Topic 2	<ul style="list-style-type: none"> • Cisco Hardware Replacement: This section of the exam measures the skills of a Technical Support Engineer and teaches how to safely and correctly replace Cisco hardware. It explains safety procedures such as creating safe work zones and handling electrostatic discharge. Students learn the step-by-step processes to replace a wide range of Cisco devices, from switches and routers to firewalls, UCS servers, and collaboration endpoints. It also covers configuring Cisco NX-OS software, including understanding operating modes, boot procedures, and password recovery, and introduces Cisco collaboration endpoint solutions like IP phones and video systems.
Topic 3	<ul style="list-style-type: none"> • Cisco UCS and Data Center Architecture: This section of the exam measures the skills of a Data Center Engineer and introduces Cisco's UCS and data center solutions. It explains the devices found in a data center, including switches, UCS servers, and director switches, and describes different server deployment models. Students will also learn about virtualization components like virtual machines, hypervisors, cloud computing concepts, and deployment models. The section covers how Cisco UCS devices fit into campus networks, edge locations, and data centers, and explains the key components and connections used in UCS architecture.
Topic 4	<ul style="list-style-type: none"> • Networking Foundations: This section of the exam measures the skills of a Network Engineer and covers the basic building blocks of computer networking. It explains different types of networks like local area networks and wireless networks, and introduces lightweight wireless LANs. It describes the layers of communication models like the OSI model and TCP • IP stack, and explains how data moves across networks. It also discusses the physical cabling used in networks, such as Ethernet and fiber optics. Students will learn about network switching, IP addressing, subnetting, and routing at Layer 3. The section also introduces Cisco's campus network devices, data center switches, UCS servers, and collaboration devices, describing their roles and functions in the network.
Topic 5	<ul style="list-style-type: none"> • Cisco Infrastructure and Collaboration Infrastructure: This section of the exam measures the skills of a Collaboration Engineer and focuses on Cisco infrastructure devices, endpoints, and collaboration technologies. It introduces network devices, collaboration endpoints like IP phones and video systems, and explains on-premises collaboration deployments using tools like Cisco Unified Communications Manager. It also covers how video systems integrate into collaboration environments and highlights Cisco's cloud services for enterprise communication, including Webex Meetings, Webex Teams, and hosted collaboration solutions.

Free PDF Quiz Valid Cisco - Valid 800-150 Test Camp

Different from general education training software, our 800-150 exam questions just need students to spend 20 to 30 hours practicing on the platform which provides simulation problems, can let them have the confidence to pass the 800-150 exam, so little time great convenience for some workers, how efficiency it is. Time is money, in today's increasingly pay attention to efficiency, we should use time in the right place, with low time get high scores in return, the 800-150 Latest Exam torrents are very good to do this.

Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which command is used to copy the startup configuration of a device to a USB file system when transferring files to a Cisco device?

- A. Router# copy startup-config usbflash0:[filename]
- B. Router# copy startup-config tftp://[server_ip]/[destination_file]
- C. Router# copy running-config usbflash0:[filename]
- D. Router# copy usbflash0:[filename] startup-config

Answer: A

Explanation:

To back up the startup configuration of a Cisco device to a USB drive, the command `copy startup-config usbflash0:[filename]` is used. This command copies the contents of the startup configuration file stored in NVRAM to a specified file on the USB flash drive. This is particularly useful for creating backups before performing upgrades or replacements. Option A: Copies the startup configuration to a TFTP server, not a USB drive.

Option B: Attempts to copy from the USB drive to the startup configuration, which is the reverse of the desired operation.

Option D: Copies the running configuration, not the startup configuration, to the USB drive.

NEW QUESTION # 16

Which management option is best suited for standalone Cisco Secure Firewall deployments?

- A. Cisco Secure Firewall Device Manager
- B. Cisco Secure Firewall Management Center
- C. Cisco Defense Orchestrator
- D. Cisco Security Manager

Answer: A

Explanation:

For standalone Cisco Secure Firewall deployments, the Cisco Secure Firewall Device Manager (FDM) is the most appropriate management option. FDM is a browser-based, on-box management tool that allows administrators to configure and manage a single firewall device without the need for external management infrastructure. It provides an intuitive interface for basic configurations, policy management, and monitoring.

In contrast:

* Cisco Secure Firewall Management Center (FMC) is designed for centralized management of multiple firewall devices.

* Cisco Defense Orchestrator (CDO) is a cloud-based solution for managing security policies across various devices.

* Cisco Security Manager is an older platform primarily used for managing ASA devices.

NEW QUESTION # 17

Which two actions ensure a smooth transition to the new hardware when replacing a Cisco UCS C-Series Rack-Mount Server? (Choose two.)

- A. Temporarily disable all firewalls during the replacement process.
- B. Decommission the server if it is integrated in a Cisco UCS domain.
- C. Back up the server configuration using Cisco Integrated Management Controller.
- D. Reconfigure the DHCP server to assign a new IP address to the replacement server.
- E. Update the firmware on the fabric interconnects.

Answer: B,C

Explanation:

To ensure a smooth replacement of a Cisco UCS C-Series Rack-Mount Server, two critical actions are:

* Back up the server configuration using the Cisco Integrated Management Controller (CIMC):

This preserves all configuration data such as BIOS settings, RAID setup, and network configuration.

After replacing the hardware, this configuration can be restored to minimize setup time.

* Decommission the server if it is integrated in a Cisco UCS domain: Before physically replacing the server, decommissioning it ensures the UCS Manager properly releases it from the inventory, preventing configuration conflicts or orphaned profiles.

Other options, like reconfiguring DHCP or disabling firewalls, are not required procedures for a UCS C-Series hardware swap.

NEW QUESTION # 18

Which protocol should be analyzed when troubleshooting call quality between IP phones?

- A. SCCP
- B. H.323
- C. SIP
- D. RTP

- E. 323: An older protocol suite for multimedia communication, encompassing both signaling and media, but less commonly used in modern IP telephony. Reference: Supporting Cisco Devices for Field Technicians (FLDTEC) - Troubleshooting Methodologie

Answer: D

Explanation:

When addressing call quality issues between IP phones, the Real-time Transport Protocol (RTP) is the primary protocol to analyze. RTP is responsible for the actual transmission of voice data during a call, and its performance directly impacts call quality.

Key factors affecting RTP and, consequently, call quality include:

Packet Loss: Missing packets can lead to audio gaps.

Jitter: Variations in packet arrival times can cause choppy audio.

Latency: Delays in packet delivery can result in noticeable lag.

Analyzing RTP streams allows technicians to identify these issues and implement appropriate Quality of Service (QoS) measures to mitigate them.

In contrast:

SIP (Session Initiation Protocol): Handles call setup, modification, and teardown but not the media stream.

SCCP (Skinny Client Control Protocol): A Cisco proprietary protocol for signaling, not media transport.

NEW QUESTION # 19

Which command is used to download a copied configuration file from a TFTP server to merge it with the running configuration of a replacement Cisco device?

- A. load tftp: running-config
- **B. copy tftp: running-config**
- C. merge tftp: running-config
- D. copy tftp: startup-config

Answer: B

NEW QUESTION # 20

.....

It is our unshakable faith and our 800-150 practice materials will offer tremendous help. The quality and value of the 800-150 guide prep are definitely 100 percent trust-able. We guarantee that you can pass the exam at one time even within one week based on 800-150 Exam Braindumps regularly 98 to 100 percent of former exam candidates have achieved their success by them. We provide tracking services to all customers who purchase our 800-150 learning questions 24/7.
