Policy documentation and training is a:

- A. Technical control
- B. Logical control
- C. Physical control
- D. Administrative control

Answer: D

Explanation:

There are three, commonly accepted forms of Controls:

Administrative-These are the laws, regulations, policies, practices and guidelines that govern the overall requirements and controls for an Information Security or other operational risk program. For example, a law or regulation may require merchants and financial institutions to protect and implement controls for customer account data to prevent identity theft. The business, in order to comply with the law or regulation, may adopt policies and procedures laying out the internal requirements for protecting this data, which requirements are a form of control.

Logical -These are the virtual, application and technical controls (systems and software), such as firewalls, antivirus software, encryption and maker/checker application routines.

Physical -Whereas a firewall provides a "logical" key to obtain access to a network, a "physical" key to a door can be used to gain access to an office space or storage room. Other examples of physical controls are video surveillance systems, gates and barricades, the use of guards or other personnel to govern access to an office, and remote backup facilities.
