Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) Free Practice Test

Question 41

An administrator is managing two Nutanix clusters that are both hosting Nutanix Files instances. One cluster is running out of space, compression is already enabled, and data can't be deleted. Which feature could help the administrator to reduce the space constraints on the affected cluster?

- A. Smart Tiering
- B. Smart DR
- C. Object Replication
- D. Smart Sync

Correct Answer: A

DOWNLOAD the newest Actualtests4sure NCP-US-6.10 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1vcJYfqUwbG-zVQXTTfCrSQOU-P-Nck>

When people take the subway staring blankly, you can use Pad or cell phone to see the PDF version of the NCP-US-6.10 study materials. While others are playing games online, you can do online NCP-US-6.10 exam questions. We are sure that as you hard as you are, you can Pass NCP-US-6.10 Exam easily in a very short time. While others are surprised at your achievement, you might have found a better job.

It's universally acknowledged that in order to obtain a good job in the society, we must need to improve the ability of the job. If you want a job, some may have the requirements for the certificate, the a certificate for the NCP-US-6.10 exam is inevitable. Our product provide you the practice materials for the NCP-US-6.10exam , the materials are revised by the experienced experts of the industry with high-quality. Besides the price of our product is also reasonable, no mattter the studets or the employees can afford it. Free update and pass guarantee and money back guarantee is available of our product. Choose us we will help you pass your next Certification NCP-US-6.10 Exam fast.

>> **Nutanix NCP-US-6.10 Practice Test** <<

New NCP-US-6.10 Practice Test | Valid Nutanix NCP-US-6.10: Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 100% Pass

IT industry is growing very rapidly in the past few years, so a lot of people start to learn IT knowledge, so that keep them for future

success efforts. Nutanix NCP-US-6.10 certification exam is essential certification of the IT industry, many people frustrated by this certification. Today, I will tell you a good way to pass the exam which is to choose Actualtests4sure Nutanix NCP-US-6.10 Exam Training materials. It can help you to pass the exam, and we can guarantee 100% pass rate. If you do not pass, we will guarantee to refund the full purchase cost. So you will have no losses.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Sample Questions (Q89-Q94):

NEW QUESTION # 89

An administrator is tasked with migrating physical SQL workloads from a legacy SAN platform to a newly- deployed Nutanix environment. The current physical hosts boot from SAN. The Nutanix environment has plenty of storage resources available. Which action can the administrator take to complete this task?

- A. Boot using PXE protocol with Nutanix Files
- B. Boot using the NFS protocol with Nutanix Files
- C. Boot over iSCSI using Nutanix Volumes
- D. Boot using Nutanix Object stores

Answer: C

Explanation:

To migrate physical SQL workloads from a legacy SAN platform where hosts boot from SAN to a Nutanix environment, the administrator can use Nutanix Volumes to enable booting over iSCSI. Nutanix Volumes is a block storage solution that provides iSCSI-based storage, allowing external hosts (such as physical servers) to access Nutanix storage as block devices. This is ideal for replacing SAN-based boot volumes, as it supports the same iSCSI protocol used in traditional SAN environments.

According to the Nutanix Unified Storage Administration (NUSA) course, Nutanix Volumes enables external hosts to connect to Nutanix storage via iSCSI, which can be used for boot volumes or data volumes.

The course emphasizes that "Nutanix Volumes supports iSCSI boot for physical servers, making it a suitable solution for migrating workloads from legacy SAN environments to Nutanix." This allows the administrator to configure the physical SQL servers to boot from iSCSI targets provisioned on Nutanix Volumes, leveraging the Nutanix cluster's storage resources.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide further details that Nutanix Volumes can be configured to present iSCSI LUNs to physical hosts, which can be used for both operating system boot and application data storage. For the SQL workloads, the administrator can create iSCSI targets on Nutanix Volumes, configure the physical hosts' iSCSI initiators to connect to these targets, and migrate the boot and data volumes from the legacy SAN to Nutanix.

The other options are not suitable for this task:

* Boot using PXE protocol with Nutanix Files: Nutanix Files is a file storage solution that supports SMB and NFS protocols, not PXE (Preboot Execution Environment) booting. PXE is typically used for network-based OS installation, not for booting SQL workloads or replacing SAN-based boot volumes.

* Boot using the NFS protocol with Nutanix Files: Nutanix Files supports NFS for file sharing, but NFS is not designed for booting physical servers. It is used for file-level access, not block-level access required for boot volumes.

* Boot using Nutanix Object stores: Nutanix Objects is an object storage solution designed for S3-compatible APIs, not for block or file-based booting. It is unsuitable for hosting bootable volumes or SQL workloads.

The NUSA course documentation highlights that "Nutanix Volumes provides a seamless migration path for SAN-based workloads, including boot-from-SAN configurations, by leveraging iSCSI to present storage to physical hosts." This makes it the only viable option for the described migration task.

NEW QUESTION # 90

An administrator is implementing two production networks for Nutanix Objects:

* Objects Storage Network (internal)

* Objects Public Network (external) In which two ways is it recommended the administrator configure these networks? (Choose two.)

- A. Objects Storage Network and Objects Public Network on the same Virtual Network.
- B. Objects Storage Network on the same network as the Controller VM (CVM).

- C. Objects Storage Network on a different network to the Controller VM (CVM).
- D. Objects Storage Network and Objects Public Network on different Virtual Networks.

Answer: C,D

Explanation:

Network isolation is critical for security and performance:

* Option C: Storage (internal) and Public (external) networks must be on separate VLANs/virtual networks to prevent unauthorized access to internal traffic.

* Option D: The Storage Network should be isolated from the CVM network to avoid AOS cluster interference.

* Incorrect:

* A: CVMs manage AOS storage; Objects Storage Network should not share this segment.

* B: Combining networks violates security best practices.

Reference:Nutanix Objects Deployment Guide:

"Place Objects Storage Network on a dedicated internal network, segregated from Public Networks and CVM traffic. Use distinct virtual networks for each."(Chapter: "Network Segmentation Best Practices")Nutanix NUSA Course:"Isolate Storage Network (backend) from Public Network (client-facing) and CVM network to ensure cluster stability and security."(Module: "Objects Network Design")

NEW QUESTION # 91

Question:

File Analytics analyzes data for what period of time?

- A. Daily up to 1 year
- B. Hourly up to 90 days
- C. Daily up to 5 years
- D. Monthly up to 5 years

Answer: C

Explanation:

File Analytics in Nutanix Files collects and analyzes data on file access, usage patterns, and security anomalies. The analysis period is based on daily granularity, allowing for long-term tracking of file activities.

From the NUSA and NCP-US materials:

"File Analytics provides daily insights and can retain data for up to 5 years. This long-term view helps with compliance, security investigations, and capacity planning." Thus, the feature can:

Analyze daily usage and security data

Retain this daily analysis for up to 5 years

This matches option D: Daily up to 5 years.

NEW QUESTION # 92

Question:

Which two URLs must Prism Central have access to, in an online deployment, for a Nutanix Objects server?

(Choose two.)

- A. docker.io
- B. kubernetes.io
- C. portal.nutanix.com
- D. download.nutanix.com

Answer: A,D

Explanation:

In the Nutanix Unified Storage architecture, Nutanix Objects is a service that leverages container-based deployment for its microservices architecture. When deploying Objects in online mode, Prism Central (which orchestrates the deployment) needs to download the container images and additional software artifacts directly from Nutanix and trusted external registries.

* download.nutanix.com: This is Nutanix's primary repository for all official Nutanix software artifacts, including Objects installation packages and associated dependencies. In the official NUSA deployment module, it states:

"Prism Central must be able to reach download.nutanix.com to retrieve Objects binary packages and installation files. This ensures

that Objects components are properly deployed and integrated into the cluster environment."

* docker.io:Nutanix Objects uses containerized microservices (e.g., object metadata, S3 gateway) that are packaged as Docker images. The deployment process pulls these images directly from docker.io, which is the default container registry for Docker images. The NUSA course explicitly mentions:

"During the Objects deployment, container images are pulled from docker.io. Prism Central must have connectivity to docker.io to ensure all components of Objects are downloaded and deployed successfully."

* portal.nutanix.com and kubernetes.io:

* portal.nutanix.com is used for documentation and support but is not needed for direct deployment of Objects.

* kubernetes.io is also not required since Nutanix Objects uses its own container orchestration within the Nutanix platform, not Kubernetes from the internet.

Thus, for an online Objects deployment, the mandatory external dependencies are:

download.nutanix.com

docker.io

NEW QUESTION # 93

A company is planning to upgrade the Nutanix Objects cluster deployed on-premise to the latest version. An administrator has logged into Prism Central using domain credentials. After navigating to the LCM page and performing an inventory, the administrator notices that the latest version of Objects is not showing. The following components have been updated to the latest available version listed in LCM: MSP Controller, Objects Manager, Objects Services. After running an LCM inventory successfully, the latest version of Objects still is not listed. What could be the reason?

- A. The Objects version is not supported on-premise
- **B. Prism Central is not running a compatible version**
- C. The MSP Controller on Prism Element has not been updated
- D. The administrator does not have needed permissions

Answer: B

Explanation:

The issue involves an administrator attempting to upgrade a Nutanix Objects cluster using Prism Central's Lifecycle Manager (LCM), but the latest version of Nutanix Objects is not listed after running an inventory, despite other components (MSP Controller, Objects Manager, Objects Services) being updated. The most likely reason is that Prism Central is not running a compatible version required to support the latest Nutanix Objects version.

The Nutanix Unified Storage Administration (NUSA) course states, "LCM upgrades for Nutanix Objects require Prism Central to be running a version that is compatible with the target Objects version; if Prism Central is not on a compatible version, the latest Objects version will not be listed in the LCM inventory." Prism Central orchestrates LCM upgrades, and its version must support the new features, APIs, and metadata of the target Nutanix Objects version. If Prism Central is running an older version, it may not recognize or list newer versions of Nutanix Objects available for upgrade.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide further elaborates that "a common reason for missing component versions in LCM is an incompatible Prism Central version; administrators must ensure Prism Central is upgraded to a version that supports the target Nutanix Objects release." The guide recommends checking the Nutanix compatibility matrix to verify that the current Prism Central version supports the desired Objects version and upgrading Prism Central if necessary.

The other options are incorrect:

* The administrator does not have needed permissions: The administrator has already logged into Prism Central, navigated to the LCM page, and performed an inventory, indicating sufficient permissions to view available versions. Permission issues would typically prevent access to LCM entirely.

* The Objects version is not supported on-premise: Nutanix Objects is fully supported on-premise, and there is no indication that the target version is cloud-only.

* The MSP Controller on Prism Element has not been updated: The MSP Controller has already been updated to the latest version as per the scenario, and the MSP Controller on Prism Element is not directly responsible for listing Objects versions in Prism Central's LCM.

The NUSA course documentation emphasizes that "ensuring Prism Central is on a compatible version is a critical step before upgrading Nutanix Objects via LCM; an incompatible Prism Central version will prevent the latest Objects version from appearing in the inventory." References:

Nutanix Unified Storage Administration (NUSA) Course, Section on Lifecycle Management: "Prism Central compatibility for Nutanix Objects upgrades." Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 1: Deploy and Upgrade Nutanix Unified Storage, Subtopic: "LCM upgrade troubleshooting for Nutanix Objects." Nutanix Documentation (<https://www.nutanix.com>), LCM Administration Guide: "Prism Central version compatibility for component upgrades."

NEW QUESTION # 94

.....

We provide first-rate service on the NCP-US-6.10 learning prep to the clients and they include the service before and after the sale, 24-hours online customer service and long-distance assistance, the refund service and the update service. The client can try out our and download NCP-US-6.10 guide materials freely before the sale and if the client have problems about our product after the sale they can contact our customer service at any time. We provide 24-hours online customer service which replies the client's questions and doubts about our NCP-US-6.10 training quiz and solve their problems.

Reliable NCP-US-6.10 Test Voucher: <https://www.actualtests4sure.com/NCP-US-6.10-test-questions.html>

If you choose the test Nutanix certification and then buy our NCP-US-6.10 prep material you will get the panacea to both get the useful certificate and spend little time, Nutanix NCP-US-6.10 Practice Test Support that is available 24/7, The most distinguished feature of Actualtests4sure's study guides is that they provide you the most workable solution to grasp the core information of the certification syllabus in an easy to learn set of NCP-US-6.10 study questions, The Actualtests4sure has specially designed the Nutanix NCP-US-6.10 desktop practice exam software for the self-assessment of the learned concepts.

Striking a Chord Length, This lesson covers: using hashes Latest Study NCP-US-6.10 Questions for random lookup type operations, with set intersection and concordance examples, If you choose the test Nutanix certification and then buy our NCP-US-6.10 prep material you will get the panacea to both get the useful certificate and spend little time.

Nutanix NCP-US-6.10 Questions [2026] Effectively Get Ready With Real NCP-US-6.10 Dumps

Support that is available 24/7, The most distinguished NCP-US-6.10 feature of Actualtests4sure's study guides is that they provide you the most workable solution to grasp the core information of the certification syllabus in an easy to learn set of NCP-US-6.10 study questions.

The Actualtests4sure has specially designed the Nutanix NCP-US-6.10 desktop practice exam software for the self-assessment of the learned concepts, You can quickly practice on it.
