# 1Z0-1057-24

## Topic - Project Date Cascade Options

Use the Cascade option choice list to determine whether your changes to project dates cascade to tasks. Use the Basic Information region on the Edit Project Template page to select one of the following options:

Do not cascade project date changes to tasks: Both start and finish dates are editable. However, you must ensure the following:

The project start date is not later than the earliest task date.

The project finish date is not earlier than the latest task date...

Cascade project start date change to affected tasks: You can edit only the project start date.

Cascade project finish date change to affected tasks: You can edit only the project finish date.

Do not cascade project date changes to tasks is the default value. You must select the cascade option each time you change the project dates, as your selection isn't saved for future date changes.

If you select to roll up planned dates for tasks or are using an external application for scheduling, then you can't modify the project start or finish dates.

## QUESTION: 7

What is the precedence order in which cost rates are determined for a planning resource when deriving raw costs for rate-based planning resources?

Option A : Resource class rate schedule > Override rate > Job rate schedule > Person rate schedule

Option B : Override rate > Job rate schedule > Resource class rate schedule > Person rate schedule

Option C : Person rate schedule > Job rate schedule > Resource class rate schedule > Override rate

Option D : Override rate > Person rate schedule > Job rate schedule > Resource class rate schedule

Option E : Job rate schedule > Resource class rate schedule > Override rate > Person rate schedule

Correct Answer: D

## QUESTION: 8

Which three are valid password complexity criteria while setting up password policies? (Choose three.)

Option A : Complex: At least 8 characters, 1 uppercase, and 1 number

Option B : Very Complex: At least 8 characters, 1 uppercase, 1 number, and 2 special characters

Option C : Very Complex: At least 6 characters, 1 uppercase, 1 number, and 1 special character

Option D : Very Complex: At least 8 characters, 1 uppercase, 1 number, and 1 special character

### Oracle Project Management Cloud 2024 Implementation Professional Sample Questions (Q91-Q96):

#### NEW QUESTION # 91

Which precedence order is used by the system for labor schedules to distribute payroll cost?

- A. Assignment > Element > Assignment Element
- B. Element > Assignment Element > Assignment
- C. Assignment Element > Element > Assignment
- **D. Assignment > Assignment Element > Element**

**Answer: D**

Explanation:

The precedence order that is used by the system for labor schedules to distribute payroll cost is Assignment > Assignment Element > Element. This means that the system first looks for a labor schedule that is assigned to the employee assignment, then for a labor schedule that is assigned to the payroll element of the employee assignment, and finally for a labor schedule that is assigned to the

payroll element itself. The system uses the first labor schedule that it finds in this order to distribute the payroll cost to projects and tasks based on the hours and rates defined in the schedule. #### NEW QUESTION # 92

Which two statements describe how the Resource Qualification Score is calculated?

- A. An individual's score is 100% if the resource request has a qualification with a specified proficiency and the resource has the qualification with a proficiency that is lower or higher than specified.
- B. An individual's score is 100% if the resource request has a qualification, but no proficiency is specified, and the resource has the qualification.
- C. An individual's score is 100% if the resource request has a qualification with a specified proficiency and the resource has the qualification that meets the specified proficiency.
- D. An individual's score is 100% if the resource request has a qualification with a specified proficiency and the resource does not have the qualification.

**Answer: B,C**

Explanation:

The Resource Qualification Score is a percentage that indicates how well an individual matches the qualifications required for a resource request. An individual's score is 100% if either of the following conditions are met:

\* The resource request has a qualification, but no proficiency is specified, and the resource has the qualification. This means that any level of proficiency is acceptable for the qualification.

\* The resource request has a qualification with a specified proficiency and the resource has the qualification that meets the specified proficiency. This means that the resource has the exact level of proficiency required for the qualification. An individual's score is not 100% if the resource request has a qualification with a specified proficiency and the resource does not have the qualification or has a different level of proficiency than required. In this case, the score is calculated based on how close the resource's proficiency is to the required proficiency. Reference: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/20c/oapfm/manage-project-resources.html#OAPFM2356001>

#### NEW QUESTION # 93

Your organization has decided to enable the common accounting and project accounting periods option while defining business unit implementation options.

Where will you maintain the accounting period statuses if this option has been enabled?

- A. General Ledger
- B. Subledger Accounting
- C. Project Foundation
- D. Project Costing

**Answer: C**

#### NEW QUESTION # 94

Which three tasks can be performed using the project requirements work area? (Choose three.)

- A. adding scrum master to backlog items.
- B. creating projects and tasks in the context of backlog items.
- C. tracking backlog item status from the requirement storyboard.
- D. creating issues for the backlog items.
- E. creating change orders for the backlog items.

**Answer: B,C,D**

Explanation:

The project requirements work area is a work area that allows you to define and manage requirements for your projects using various methods and sources. Requirements are statements of needs or expectations that must be met by the project outcome. Backlog items are a type of requirement that are used for agile projects that follow an iterative and incremental approach. Three of the tasks that can be performed using the project requirements work area are:

\* creating projects and tasks in the context of backlog items: This task allows you to create new projects and tasks or link existing projects and tasks to backlog items. This helps you to plan and execute the work that is required to fulfill the backlog items.

\* creating issues for the backlog items: This task allows you to create new issues or link existing issues to backlog items. Issues are problems or risks that affect the progress or outcome of a project or requirement. This helps you to track and resolve the issues that are related to the backlog items.

\* tracking backlog item status from the requirement storyboard: This task allows you to view and update the status of backlog items from the requirement storyboard. The requirement storyboard is a graphical representation of the progress and completion of backlog items using various stages and lanes. This helps you to monitor and control the delivery of backlog items. Adding scrum master to backlog items and creating change orders for the backlog items are not tasks that can be performed using the project requirements work area. Adding scrum master to backlog items is a task that can be performed using the project team work area, as scrum master is a role that is assigned to a project team member who facilitates and coordinates the agile project activities. Creating change orders for the backlog items is a task that can be performed using the project change management work area, as change orders are documents that capture and approve changes to a project scope, schedule, or budget.
