They often take the professional qualification exam as a stepping stone to enter an industry. If you are one of these people, our XSOAR-Engineer Exam Engine will be your best choice.

Palo Alto Networks XSOAR Engineer Sample Questions (Q51-Q56):

NEW QUESTION # 51

A playbook needs to dynamically add an email sender's address to a Cortex XSOAR list named "BlockedSenders_Email".

Which built-in command should be used within the playbook to add this email address to the specified list?

- A. !setIncident list.BlockedSenders_Email="<email_address>"
- B. !appendToListContext listPath="BlockedSenders_Email" data="<email_address>"
- C. !createListItem listName="BlockedSenders_Email" itemValue="<email_address>"
- D. !addToList listName="BlockedSenders_Email" listData="<email_address>"

Answer: D

Explanation:

XSOAR's built-in Lists Services supports operations such as creating, updating, and appending items to lists using automation commands. The correct command for appending a value to an existing list is !addToList, which inserts the new string (in this case an email address) into the list array stored within the XSOAR Lists infrastructure.

The Admin Guide describes !addToList as the intended mechanism to add new elements to a named list while automatically handling JSON structure and avoiding duplication errors.

Option B, !appendToListContext, modifies context data, not persistent platform lists—therefore it will not update the BlockedSenders list. Option C misuses !setIncident, which updates incident fields only, not system lists. Option D, !createListItem, is used when an integration or automation script exposes a "create item" action, not for native XSOAR lists.

Thus, the correct and documented method of adding an email value to a persistent XSOAR list is !addToList, making option A the accurate choice.

NEW QUESTION # 52

Where does the mapping of user groups to SAML groups take place?

- A. Cortex Gateway.
- B. Palo Alto Networks Hub.
- C. Tenant.
- D. Customer Support Portal.

Answer: C

Explanation:

The SSO (SAML) configuration is performed inside each Cortex XSOAR tenant, under the Authentication settings.

Group mapping (SAML group # XSOAR role/group) is managed at the tenant level, not in the Hub, Gateway, or Support Portal.

NEW QUESTION # 53

An administrator has noticed that an incident fetch has failed, causing several internal workflows to be backed up. The administrator would like to receive notifications the next time the incident fetch fails.

How can they achieve this?

- A. Create a custom playbook that sends an email each time the fetch fails.
- B. Add a server config to notify when incident fetch fails.
- C. Schedule a job that runs and monitors incidents in XSOAR that will send an email if there are no new incidents.
- D. Create a new integration that monitors the incident fetch and sends an email if the fetch fails.

Answer: D

NEW QUESTION # 54

Which three actions can an engineer take on the troubleshooting page? (Choose three.)

- A. View and modify server configuration settings
- B. Download the debug log bundle
- C. View a list of server administrators
- D. Put the XSOAR server in maintenance mode
- E. Export and import custom content

Answer: A,B,D

NEW QUESTION # 55

What will happen if a playbook debugger is left running for more than 24 hours?

- A. By default, the system closes automatically any debugger session that have been open 180 minutes.
- B. By default, every 24 hours, the system closes any debugger sessions that have been open for more than 180 minutes.
- C. The session will be running till stopped manually by administrator.
- D. The session must be stopped during 180 minutes manually by administrator, user will receive notification automatically.

Answer: A

NEW QUESTION # 56

.....
