Salesforce Platform Developer I (PDI) Sample Questions (Q61-Q66):

NEW QUESTION # 61

Which code displays the contents of a Visualforce page as a PDF?

- A. `<apex:page contentType="application/pdf">`
- B. `<apex:page contentType="pdf">`
- C. `<apex:page contentType="pdf">`
- D. `<apex:page contentType="pdf">`

Answer: C

NEW QUESTION # 62

A developer must modify the following code snippet to prevent the number of SOQL queries issued from exceeding the platform governor limit. public class without sharing OpportunityService(public static List<OpportunityLineItem> getOpportunityProducts(Set<Id> opportunityIds){ List<OpportunityLineItem> oppLineItems = new List<OpportunityLineItem>(); for(Id thisOppId : opportunityIds){ oppLineItems.addAll([Select Id FROM OpportunityLineItems WHERE OpportunityId = :thisOppId]); } return oppLineItems; } } The above method might be called during a trigger execution via a Lightning component. Which technique should be implemented to avoid reaching the governor limit?

- A. Use the System.Limits.getQueries() method to ensure the number of queries is less than 100.
- B. Refactor the code above to perform the SOQL query only if the Set of opportunityIds contains less than 100 Ids.
- **C. Refactor the code above to perform only one SOQL query, filtering by the Set of opportunityIds.**
- D. Use the System.Limits.getLimitQueries() method to ensure the number of queries is less than 100.

Answer: C

NEW QUESTION # 63

A developer creates an Apex helper class to handle complex trigger logic. How can the helper class warn users when the trigger exceeds DML governor limits?

- A. By using ApexMessage.Messages() to display an error message after the number of DML statements is exceeded.
- B. By using PageReference.setRedirect() to redirect the user to a custom Visualforce page before the number of DML statements is exceeded.
- C. By using Messaging.sendEmail() to continue the transaction and send an alert to the user after the number of DML statements is exceeded.
- **D. By using Limits.getDMLRows() and then displaying an error message before the number of DML statements is exceeded.**

Answer: D

NEW QUESTION # 64

A company's engineering department is conducting a month-long test on the scalability of an in-house-developed software that requires a cluster of 100 or more servers. Which of the following models is the best to use?

- A. BaaS
- B. PaaS
- **C. IaaS**
- D. SaaS

Answer: C

Explanation:

Infrastructure as a Service (IaaS) is the best model for the scenario described because it provides on-demand access to compute, storage, and networking resources that are ideal for a scalable server cluster. IaaS allows the engineering team to rent infrastructure resources without having to invest in physical hardware, making it perfect for temporary or fluctuating workloads, such as scalability testing.

* Key Characteristics of IaaS:

- * Full control over the operating systems and applications running on the servers.
- * Flexible resource allocation to support high scalability.
- * Ideal for custom software testing where specific server configurations may be needed.

Why not the other options?

- * PaaS (Platform as a Service): While PaaS is excellent for application development and deployment, it abstracts the infrastructure layer, which would limit the engineering team's control over the cluster's configuration.
- * SaaS (Software as a Service): SaaS delivers fully managed applications, not infrastructure or testing environments. It's irrelevant for this use case.
- * BaaS (Backend as a Service): BaaS is tailored to mobile or web application backend development, providing APIs and pre-built services, not infrastructure for a server cluster.

Platform Developer References:

While this question is broader than Salesforce-specific concepts, understanding IaaS vs. PaaS is relevant when working with Salesforce development. For example:

- * Salesforce operates as a PaaS (e.g., Force.com platform), allowing developers to build and deploy applications without managing underlying servers.

* Testing scalability and performance at an infrastructure level (as in the question) would fall under IaaS concepts, which Salesforce developers might encounter when integrating external services or infrastructure like AWS, Azure, or Google Cloud. This foundational knowledge complements your understanding of cloud services in the Salesforce ecosystem.

NEW QUESTION # 65

Which scenario is valid for execution by unit tests?

- A. Load data from a remote site with a callout.
- B. Generate a Visualforce PDF with `getContentAsPDF()`.
- C. Execute anonymous Apex as a different user.
- D. Set the created date of a record using a system method.

Answer: D
