Cisco Certified Support Technician (CCST) IT Support Sample Questions (Q131-Q136):

NEW QUESTION # 131
During a routine inspection, an IT support technician notices that some UTP cables run parallel and close to fluorescent lighting fixtures. The technician is concerned about potential interference.
Which UTP cable feature should be checked to ensure it can handle such interference?

- A. Insulation quality
- B. Waterproof coating
- C. Bend radius
- D. Shielding

Answer: D

Explanation:
Correct Answer. B. Shielding Although typical UTP cables are unshielded, newer variants and higher categories like Category 6A or Category 7 include additional shielding to protect against EMI, such as that from fluorescent lighting. Ensuring that the UTP cables have adequate shielding is important in environments where they are exposed to potential interference sources.
Option A is incorrect because waterproof coating protects against moisture but does not prevent electromagnetic interference.
Option C is incorrect because bend radius affects the physical integrity of the cable but not its susceptibility to electromagnetic interference.
Option D is incorrect because while good insulation quality is important, it primarily protects the wires inside from physical damage rather than from EMI.

NEW QUESTION # 132
Anna reports that she can no longer access the quarterly financial reports on the company server, even though her colleagues can.
What should you check first to troubleshoot her access issue?

- A. Update Anna's antivirus software
- B. Verify Anna's permissions on the folder containing the financial reports
- C. Ask Anna to restart her computer
- D. Check if Anna's account is locked out

Answer: B

Explanation:
Correct Answer. B. Verify Anna's permissions on the folder containing the financial reports Since Anna's issue is specific to

accessing a particular resource that others can access, the first step is to check her permissions for that folder. This will determine if there has been any change affecting her access.

Option A is incorrect because an account lockout would prevent her from logging into the system entirely, not just accessing specific files.

Option C is incorrect as restarting the computer would not affect her permissions on the server.

Option D is incorrect because antivirus software updates would not impact her permissions to access specific network resources.

NEW QUESTION # 133

A customer support representative receives an email from a client that contains their full name, address, and credit card details and a request to update their billing information.

Which action should the representative take?

- A. Store the data in encrypted storage.
- B. Store the data on a personal device.
- C. Reply to the user and tell them to call the accounting department.
- D. Openly share the information with the accounting department.

Answer: A

Explanation:

Payment card data and other sensitive personal information must be protected according to security policies and compliance requirements (e.g., PCI DSS). Storing the data in approved encrypted storage ensures it remains secure and accessible only by authorized personnel.

NEW QUESTION # 134

What is an essential step to take after implementing a solution to an IT problem, but before considering the problem as resolved?

- A. Monitor the solution's effectiveness and make adjustments if necessary
- B. Ignore feedback and proceed with additional unrelated changes
- C. Skip documentation to save time
- D. Revert all changes if any employee complains

Answer: A

Explanation:

Correct Answer. C. Monitor the solution's effectiveness and make adjustments if necessary Monitoring the solution after implementation ensures that it effectively resolves the problem and performs as expected. This step is crucial for making any necessary adjustments based on actual outcomes and feedback, ensuring a long-term resolution.

Option A is incorrect as ignoring feedback can lead to unresolved issues and potential failures in the solution.

Option B is incorrect because reverting all changes based on a single complaint is impractical without thorough evaluation.

Option D is incorrect as documentation is vital for future reference and continuous improvement, not something that should be skipped.

NEW QUESTION # 135

A user is attempting to install new software on a Windows 10 PC and needs to confirm the version and build of their operating system to ensure compatibility. What should the IT support technician advise the user to do to find this information quickly?

- A. Go to Settings > Update & Security > Windows Update
- B. Navigate to Control Panel > System and Security > System
- C. Right-click on "This PC" and select "Properties"
- D. Open Command Prompt and type winver

Answer: D

Explanation:

Correct Answer. B. Open Command Prompt and type winver The winver command in Command Prompt provides a pop-up window displaying the Windows version and build number. This method is quick and displays precisely the needed information for software compatibility checks.

Option A is incorrect because right-clicking on "This PC" and selecting "Properties" does show the OS version but can sometimes lack detailed build information depending on the system configuration.

Option C is incorrect because although navigating to Control Panel > System and Security > System does show detailed system information, it is a longer process compared to using the winver command.

Option D is incorrect because going to Settings > Update & Security > Windows Update focuses on updates and does not directly show OS version and build information.
