

# Pass Guaranteed Quiz 2026 CLO-002: CompTIA Cloud Essentials+ Certification Exam Unparalleled Valid Exam Questions

If you want to pass your exam just one time, then our CLO-002 exam torrent will be your best choice. We can help you pass your exam just one time, and if you fail the exam in your first attempt after using CLO-002 exam torrent, we will give you refund, and no other questions will be asked. Moreover, CLO-002 Exam Braindumps of us are high-quality, and we have helped lots of candidates pass the exam successfully. We have received many good feedbacks from our customers. We offer you online and offline chat service stuff, if you have any questions about CLO-002 exam torrent, you can consult them.

CompTIA Cloud Essentials+ Certification exam is a valuable certification for individuals who want to establish themselves as cloud computing experts. It validates their knowledge and skills in cloud computing concepts, as well as their ability to manage and operate cloud-based solutions. By earning this certification, individuals can enhance their career prospects and contribute to the success of any organization that relies on cloud technologies.

The CompTIA Cloud Essentials+ Certification Exam certification exam is suitable for IT professionals in various industries, including finance, healthcare, government, and education sectors. It is also ideal for individuals who want to pursue a career in cloud computing and want to demonstrate their knowledge and skills to potential employers. CompTIA Cloud Essentials+ Certification Exam certification exam is an excellent way to validate an individual's knowledge of cloud computing and provide a competitive edge in the job market.

## Validate Your Skills with CompTIA CLO-002 Exam Questions

This feature provides students with real-time examination scenarios to feel some pressure and solve the CLO-002 practice exam as a real threat. These CompTIA Cloud Essentials+ Certification Exam (CLO-002) practice tests are important for students so they can learn to solve real CompTIA CLO-002 Exam Questions and pass CompTIA CLO-002 certification test in a single try. The desktop-based CompTIA CLO-002 practice test software works on Windows and the web-based CompTIA Cloud Essentials+ Certification Exam practice exam is compatible with all operating systems.

To pass the CompTIA CLO-002 Exam, individuals must demonstrate a comprehensive understanding of cloud computing concepts, principles, and practices. CLO-002 exam consists of 60 multiple-choice questions and has a time limit of 90 minutes. The passing score for the exam is 720 out of 900. Upon passing the exam, individuals will receive the CompTIA Cloud Essentials+ Certification, which is recognized globally and is highly regarded in the IT industry.

## CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q593-Q598):

### NEW QUESTION # 593

Which of the following capabilities MUST a vendor be able to fulfill in order to provide a successful IaaS solution? (Select TWO).

- A. Application development
- B. Application configuration settings
- C. Network maintenance
- D. Physical security
- E. Web-based application maintenance

**Answer: C,D**

### NEW QUESTION # 594

Which of the following are true about the use of machine learning in a cloud environment? (Choose two).

- A. Using machine learning solutions in the cloud removes the data-gathering step from the learning process.
- B. Machine learning requires a specialized IT team to create the machine learning models from scratch.
- C. Specialized machine learning algorithms can be deployed to optimize results for specific scenarios.
- D. Just one type of cloud storage is available in the cloud for machine learning workloads.
- E. Machine learning can leverage processes in a cloud environment through the use of cloud storage and auto-scaling.
- F. Machine learning can just be hosted in the cloud for managed services.

**Answer: C,E**

### NEW QUESTION # 595

A software developer wants to ensure a packaged application can be deployed in different environments without modifying anything but the application settings. The developer creates an image and provides instructions for the systems administrator to use for deployment. This is an example of:

- A. containerization.
- B. deployment automation.
- C. source code control.
- D. application versioning.

**Answer: A**

Explanation:

Containerization is the process of developing software applications for containers, which are isolated user spaces that bundle application code with all the dependencies and libraries required to run on any infrastructure. Containerization allows applications to be deployed in different environments without modifying anything but the application settings. This is different from application versioning, which is the practice of assigning unique identifiers to different versions of an application. Source code control is the management of changes to source code files, which is not related to deployment. Deployment automation is the use of tools and scripts to automate the deployment process, which may or may not involve containers. ### NEW QUESTION # 596

Which of the following critical success factors would likely persuade a company to use a SaaS service?

- A. The elimination of company driven application maintenance and backups
- B. The decrease of company-owned physical system downtime
- C. The increase of web presence
- D. The lowering of thin client management costs

**Answer: A**

### NEW QUESTION # 597

Which of the following service models BEST describes a cloud-hosted application in which the end user only creates user access and configures options?

- A. IaaS
- B. SaaS
- C. MaaS
- D. PaaS

**Answer: B**

Explanation:

According to the CompTIA Cloud Essentials objectives and documents, SaaS, or Software as a Service, is the best option for describing a cloud-hosted application in which the end user only creates user access and configures options. SaaS is a cloud service model that delivers and manages software applications over the internet, without requiring the end user to install, update, or maintain any software or hardware on their own devices. SaaS applications are typically accessed through a web browser or a mobile app, and the end user only pays for the usage or subscription of the service. SaaS providers are responsible for the infrastructure, platform, security, and maintenance of the software applications, and the end user only needs to create user access and configure options according to their preferences and needs. SaaS applications are usually designed for specific purposes or functions, such as email, collaboration, CRM, ERP, or accounting.

The other service models are not as suitable for describing a cloud-hosted application in which the end user only creates user access and configures options. MaaS, or Monitoring as a Service, is a type of cloud service that provides monitoring and management of cloud resources and services, such as performance, availability, security, or compliance. MaaS is not a cloud-hosted application, but rather a cloud service that supports other cloud applications. PaaS, or Platform as a Service, is a cloud service model that delivers and manages the hardware and software resources to develop, test, and deploy applications through the cloud. PaaS provides the end user with a cloud-based platform that includes the operating system, middleware, runtime, database, and other tools and services. PaaS providers are responsible for the infrastructure, security, and maintenance of the platform, and the end user only needs to write and manage the code and data of their applications. PaaS applications are usually customized and developed by the end user, rather than provided by the cloud service provider. IaaS, or Infrastructure as a Service, is a cloud service model that delivers and manages the basic computing resources, such as servers, storage, networking, and virtualization, over the internet. IaaS provides the end user with a cloud-based infrastructure that can be used to run any software or application. IaaS providers are responsible for the hardware, security, and maintenance of the infrastructure, and the end user is responsible for the operating system, middleware, runtime, database, and applications. IaaS applications are usually more complex and require more configuration and management by the end user, rather than by the cloud service provider.
