Latest updated New DS0-001 Test Labs & Verified CompTIA Certification Training - Fantastic CompTIA CompTIA DataSys+ Certification Exam

Are you seeking to pass your CompTIA DataSys+ Certification Exam? If so, TroytecDumps is the ideal spot to begin. TroytecDumps provides comprehensive DS0-001 Exam Questions (Links to an external site.) preparation in two simple formats: a pdf file format and a CompTIA DS0-001 online practice test generator. If you fail your CompTIA DataSys+ Certification Exam (DS0-001), you can get a complete refund plus a 20% discount! Read on to find out more about the amazing DS0-001 exam questions.

CompTIA DataSys+ Certification Exam Sample Questions (Q153-Q158):

NEW QUESTION # 153
Which of the following best describes the category of SQL commands required to revoke access to database objects?

- A. DCL
- B. DDL
- C. DML
- D. TCL

Answer: B

Explanation:
The category of SQL commands that is required to revoke access to database objects is DCL.
DCL, or Data Control Language, is a subset of SQL commands that are used to control or manage the access or permissions of users or roles on a database. DCL includes commands such as GRANT and REVOKE.
GRANT is a DCL command that is used to grant privileges or roles to users or roles on specific objects in a database, such as tables, views, procedures, etc. REVOKE is a DCL command that is used to revoke privileges or roles from users or roles on specific objects in a database. For example, the following statement uses the REVOKE command to revoke the SELECT privilege from user Alice on table employee:
REVOKE SELECT ON employee FROM Alice

NEW QUESTION # 154
A company needs information about the performance of users in the sales department. Which of the following commands should a database administrator use for this task?

- A. DELETE
- B. DROP
- C. SELECT
- D. UPDATE

Answer: C

Explanation:
The command that the database administrator should use for this task is SELECT. The SELECT command is a SQL statement that retrieves data from one or more tables or views in a database.
The SELECT command can also use various clauses or options to filter, group, sort, or aggregate data according to specific criteria or conditions. By using the SELECT command, the database administrator can obtain information about the performance of users in the sales department, such as their sales volume, revenue, commission, etc. The other options are either not related or not suitable for this task. For example, DROP is a SQL command that deletes an existing table or object from a database; UPDATE is a SQL command that modifies existing data in one or more rows of a table; DELETE is a SQL command that removes existing data from one or more rows of a table.

NEW QUESTION # 155
Which of the following tools is used for natively running a Linux system in Windows?

- A. SSH
- B. WSL
- C. Telnet
- D. Remote Desktop Protocol

Answer: B

Explanation:
The tool that is used for natively running a Linux system in Windows is WSL. WSL, or Windows Subsystem for Linux, is a feature that allows users to run a Linux system natively on Windows 10 or Windows Server. WSL enables users to install and use various Linux distributions, such as Ubuntu, Debian, Fedora, etc., and run Linux commands, tools, applications, etc., without requiring a virtual machine or a dual-boot setup. WSL also provides users with interoperability and integration between Linux and Windows, such as file system access, network communication, process management, etc. WSL is useful for users who want to use Linux features or functionalities on Windows, such as development, testing, scripting, etc. The other options are either different tools or not related to running a Linux system in Windows at all. For example, Remote Desktop Protocol (RDP) is a protocol that allows users to remotely access and control another computer or device over a network; SSH, or Secure Shell, is a protocol that allows users to securely connect and communicate with another computer or device over a network; Telnet is a protocol that allows users to interact with another computer or device over a network using a text-based interface.

NEW QUESTION # 156
Which of the following cloud delivery models provides users with the highest level of flexibility regarding resource provisioning and administration?

- A. DBaaS
- B. SaaS
- C. PaaS
- D. IaaS

Answer: D

Explanation:
The cloud delivery model that provides users with the highest level of flexibility regarding resource provisioning and administration is IaaS. IaaS, or Infrastructure as a Service, is a cloud delivery model that provides users with access to virtualized computing resources, such as servers, storage, network, and operating systems, over the internet. Users can provision, configure, and manage these resources according to their needs and preferences, without having to worry about the maintenance or security of the physical infrastructure. IaaS offers users the most control and customization over their cloud environment, as well as the ability to scale up or down as needed. The other options are either different cloud delivery models or not related to cloud computing at all. For example, DBaaS, or Database as a Service, is a cloud delivery model that provides users with access to database management systems and tools over the internet; SaaS, or Software as a Service, is a cloud delivery model that provides users with access to software applications and services over the internet; PaaS, or Platform as a Service, is a cloud delivery model that provides users with access to development platforms and tools over the internet.

NEW QUESTION # 157
Which of the following are the best resources for monitoring potential server issues? (Choose two.)

- A. User connections
- B. Query execution
- C. Index usage
- D. Firewall usage
- E. Memory usage
- F. CPU usage

Answer: E,F

Explanation:
The two resources that are best for monitoring potential server issues are CPU usage and memory usage. CPU usage is the percentage of time that the processor (CPU) of the server is busy executing instructions or processes. CPU usage indicates how much workload the server can handle and how fast it can process requests. High CPU usage may affect the performance or availability of the server and cause delays or errors. Memory usage is the amount of physical memory (RAM) or virtual memory (swap space) that the server uses to store data or run applications. Memory usage indicates how much space the server has to store temporary or intermediate data or results. High memory usage may affect the performance or availability of the server and cause swapping or paging. The other options are either not relevant or not direct indicators of server health. For example, user connections are the number of users who are connected to a database server at any given time; firewall usage is the amount of data that passes through a firewall device or software; index usage is the frequency or efficiency of using indexes on tables to speed up queries; query execution is the process of running SQL statements on a database server.
