VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 2	<ul style="list-style-type: none">• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 3	<ul style="list-style-type: none">• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 4	<ul style="list-style-type: none">• IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q42-Q47):

NEW QUESTION # 42

In a mixed workload environment, which strategy best helps ensure that mission-critical VMs receive sufficient CPU and memory resources?

- A. Disable HA on less critical VMs
- B. Turn off DRS migrations for critical VMs
- C. Configure Resource Pools with high Shares for important VMs
- D. Use an external load balancer on all VMs

Answer: C

Explanation:

Creating Resource Pools with higher Shares (or reservations) for critical workloads ensures those VMs are prioritized when CPU and memory resources are contended.

NEW QUESTION # 43

Which vSphere feature simplifies agentless antivirus and antimalware scanning in guest operating systems?

- A. vSphere Replication
- B. vSAN Encryption
- C. Enhanced vMotion Compatibility
- D. vShield Endpoint (Guest Introspection)

Answer: D

Explanation:

vShield Endpoint (now NSX Guest Introspection) offloads antivirus scanning to a secure VM, reducing overhead inside each guest OS. vSphere Replication replicates VM data, vSAN Encryption secures storage, and EVC manages CPU compatibility.

NEW QUESTION # 44

An administrator needs to delete and re-deploy an NSX Edge cluster that was originally deployed from SDDC Manager and has downloaded the edge cleaner tool.

Where should the administrator run the tool to complete this task?

- A. On the Edge cluster node VM(s).
- B. On the Cloud Builder VM.
- C. On the SDDC Manager VM.
- D. On the NSX Manager VM.

Answer: A

Explanation:

The NSX Edge Cleaner tool is typically run on the Edge cluster node VM(s) to clean up the previous configuration and ensure that the node(s) are properly removed before re-deploying the NSX Edge cluster. This process helps to reset the environment and remove any leftover configurations that may affect the re-deployment.

NEW QUESTION # 45

Which feature of VMware Data Services Manager enhances database security and compliance?

- A. Storage replication
- **B. Database-Level Authentication**
- C. Automated workload migration
- D. Network traffic optimization

Answer: B

Explanation:

VMware Data Services Manager enhances database security and compliance by providing Database-Level Authentication, which ensures that access to databases is tightly controlled and that only authorized users can access sensitive database information. This is critical for maintaining security and compliance with industry standards and regulations.

NEW QUESTION # 46

A vSphere administrator wants to integrate array-based storage management features with VMware, such as snapshot offloading and QoS.

Which approaches facilitate this?

- **A. Vendor-specific VIBs or plug-ins installed on ESXi**
- B. In-guest iSCSI driver configuration
- C. Using Resource Pools for disk-based QoS
- **D. vSphere Virtual Volumes (vVols) integration**

Answer: A,D

Explanation:

vVols enable direct integration with storage arrays, and installing vendor-specific VIBs/plug-ins lets ESXi communicate advanced storage features. In-guest iSCSI (B) bypasses many vSphere-managed features. Resource Pools (D) manage CPU/memory, not storage QoS at the array level.
