試験の準備方法-実用的なArch-303実際試験試験-検証するArch-303テスト内容

Arch-303最新の試験トレントは、資格試験ごとに分類が異なるため、ユーザーはユーザーの実際のニーズに応じて独自の学習モードを選択できます。Arch-303試験の質問は、ユーザーが選択できるさまざまな学習モードを提供します。これは、コンピューターや携帯電話の複数のクライアントがオンラインで勉強したり、オフライン統合のためにデータを印刷したりするために使用できます。手頃な価格と実践を完璧にサポートする最新のArch-303試験のトレントは、Arch-303試験の質問のみを気に入っています。

Salesforce Certified B2C Commerce Architect 認定 Arch-303 試験問題 (Q14-Q19):

質問 # 14

The Client is creating a new Storefront and their requirements include:

- * ApplePay support
- * Log -n through a standard OAuth2 social media account
- * One Click checkout process
- * A/B testing for promotions

Which two items require technical documentation for customizing the Storefront Reference Architecture?

Choose 2 answers

- A. One Click checkout process
- B. ApplePay support
- C. A/B testing for promotions
- D. log in through a standard OAuth2 social media account

正解: A、D

解説:

For customizing the Storefront Reference Architecture to meet specific requirements, the following items would require detailed

technical documentation:

* Option A (One Click checkout process): Implementing a one-click checkout process involves significant customization to streamline the checkout flow, potentially requiring integration with payment providers and modifications to the user session management.

* Option C (Log in through a standard OAuth2 social media account): Integrating OAuth2 for social media logins involves handling authentication tokens, user sessions, and potentially syncing user data with the B2C Commerce profiles, all of which require detailed security and integration documentation.

These customizations require careful planning and implementation to ensure they work seamlessly with existing Storefront Reference Architecture components and meet security standards.

質問 # 15

A developer wants to import the data or different instances.

Which two types of data should the developer consider importing?

Choose 2 answers

- A. Metadata
- B. Catalog
- C. Services
- D. Sites configurations
- E. Customers

正解： B、 E

解説：

When importing data between instances, focusing on significant and impactful data types is essential:

* Option B (Catalog): Includes all product listings, descriptions, categorizations, and relationships. It's crucial for the eCommerce operation, directly affecting site navigation and customer experience.

* Option C (Customers): Customer data import is essential for maintaining continuity in customer relationships, access, and personalization across platforms.

These data types are fundamental to the functioning of an eCommerce site and ensure that essential operational data is consistent across different environments or platform migrations.

質問 # 16

A developer is checking for Cross Site Scripting (XSS) and found that the quick search is not escaped (allows inclusion of Javascript) in the following script:

```
<script>
var searchPhrase = ${searchPhrase};
</script>
```

How would the developer resolve this issue?

- A. Use <toprint value="\${searchPhrase}" />
- B. Use <isprint value="\${searchPhrase}"* encoding-'jshtmr' />
- C. Replace ' with double Quote*
- D. Use <isprint value='\${searchPhrase}' encoding-'jsblock' />

正解： B

解説：

To resolve the issue of Cross Site Scripting (XSS) where the quick search is not escaped, the developer should use the <isprint> tag with the 'jshtmr' encoding option (Answer B). This method ensures that any JavaScript included in the search phrase is properly escaped, preventing the execution of potentially malicious scripts.

The 'jshtmr' encoding is specifically designed to encode text for HTML contexts where JavaScript is embedded, providing a secure way to handle user input in Salesforce B2C Commerce.

質問 # 17

A Client has automated builds that deploy the code; however, recent builds started failing with compilation issues, which are not reproducible in developer's environment.

What first step needs to be taken to identify and fix the issue?

- A. Recreate the job in the build server to verify compilation issues.
- B. Verify the modules versions used to generate the code.
- C. **Clean up build server work space and run job again.**
- D. Verify the generated JavaScript and CSS for the build.

正解: C

解説:

When facing build failures that are not reproducible in developers' environments, a common and effective first step is to clean up the build server workspace (Answer A). This action clears any residual files, settings, or data that might be influencing the build process and causing discrepancies between local and server builds. By resetting the workspace to a clean state, it helps ensure that the build process is starting from a consistent base, potentially resolving issues caused by stale data or corrupted build artifacts. This step often resolves hidden configuration or environment-specific issues that are not immediately apparent in the code or module versions.

質問 # 18

The Client wants to have a flash sale on a few products every day. These products are sold through B2C Commerce as well as an in-store Point of Sale system that is tied to the same inventory.

An Architect analyzes the following proposed solution:

Inventory feed will continue to run daily but add a web-service call to compare and update B2C Commerce inventory in real time during checkout after a flash product's inventory reaches a threshold.

Which two risks should the Architect communicate to the Client about this solution?

Choose 2 answers

- A. Because the job would still be configured to run daily there will be a degrade in performance during non-flash sales periods.
- B. **The default rate limiter configuration for the web-service could cause the web-service to return an exception during high traffic.**
- C. If the product inventory threshold that triggers the web service calls is reached too often. It will have a negative impact on site performance.
- D. **If the external hosted web-service is unreliable. It could be a point of failure in the site's order placement flow.**

正解: B、D

解説:

The risks associated with the proposed real-time inventory update solution during flash sales are:

* Option A (The default rate limiter configuration for the web-service could cause the web-service to return an exception during high traffic): This is a critical risk because high traffic during flash sales could exceed the rate limits set for the web-service, leading to exceptions and potentially failing to update inventory in real-time.

* Option B (If the external hosted web-service is unreliable, it could be a point of failure in the site's order placement flow): Reliance on an external web-service for crucial operations like inventory updates introduces a risk of downtime or performance issues if the service is unreliable, directly impacting the ability to complete orders during peak sales periods.

Both risks could severely disrupt operations during critical sales events, suggesting a need for robust contingency plans and potentially reevaluating the solution architecture to ensure reliability.
