Salesforce Data-Architect Latest Training & Data-Architect Valid Exam Review

Our Test4Engine are so confident on their own software, because the vast number of customers have made excellent achievements with the help of our Data-Architect exam software from our research and development. There is no doubt that to get Data-Architect exam certification certainly let them find better job opportunities to boost in their IT career. In order to let you trust our products and let you more securely to prepare the exam, we promise, if you are still fail Data-Architect Exam after using our software, after still

failed, we will give you a full refund, and continue to develop better Salesforce test software of Data-Architect.

Salesforce Data-Architect Certification Exam is a rigorous test that requires a deep understanding of Salesforce data architecture concepts, best practices, and implementation strategies. Data-Architect exam is designed to test the candidate's knowledge of how to design, implement, and manage complex data architectures within the Salesforce platform. Data-Architect Exam covers topics such as data modeling, data integration, data migration, data governance, and data security.

Salesforce Certified Data Architect Sample Questions (Q80-Q85):

NEW QUESTION # 80

UC is trying to switch from legacy CRM to salesforce and wants to keep legacy CRM and salesforce in place till all the functionality is deployed in salesforce. The want to keep data in synch b/w Salesforce, legacy CRM and SAP. What is the recommendation.

- A. Integrate SAP with Salesforce, SAP to legacy CRM but not legacy CRM to Salesforce
- B. Do not integrate legacy CRM to Salesforce, but integrate salesforce to SAP
- C. Suggest MDM solution and link MDM to salesforce and SAP
- D. Integrate legacy CRM to salesforce and keep data in synch till new functionality is in place

Answer: A,C

NEW QUESTION # 81

US is implementing salesforce and will be using salesforce to track customer complaints, provide white papers on products and provide subscription (Fee) - based support.

Which license type will US users need to fulfil US's requirements?

- A. Service cloud license.
- B. Salesforce license.
- C. Lightning platform starter license.
- D. Sales cloud license

Answer: A

Explanation:

The best license type to fulfil US's requirements is the Service Cloud license. Service Cloud licenses are designed for users who need access to customer service features, such as cases, solutions, knowledge articles, entitlements, service contracts, and service console. Service Cloud users can also access standard CRM objects, such as accounts, contacts, leads, opportunities, campaigns, and reports³. Lightning Platform Starter license is not a good option because it is intended for users who need access to one custom app and a limited set of standard objects. Salesforce license is not a specific license type, but rather a generic term for any license that grants access to the Salesforce platform. Sales Cloud license is not a good option because it is intended for users who need access to sales features, such as products, price books, quotes, orders, and forecasts.

NEW QUESTION # 82

Universal Containers (UC) wants to ensure their data on 100,000 Accounts pertaining mostly to US-based companies is enriched and cleansed on an ongoing basis. UC is looking for a solution that allows easy monitoring of key data quality metrics. What should be the recommended solution to meet this requirement?

- A. Use declarative approach by installing and configuring Data.com Prospector to monitor Account data quality.
- B. Implement Batch Apex that calls out a third-party data quality API in order to monitor Account data quality.
- C. Implement an Apex Trigger on Account that queries a third-party data quality API to monitor Account data quality.
- D. Use a declarative approach by installing and configuring Data.com Clean to monitor Account data quality.

Answer: D

NEW QUESTION # 83

NTO processes orders from its website via an order management system (OMS). The OMS stores over 2 million historical records and is currently not integrated with SF. The Sales team at NTO using Sales cloud and would like visibility into related customer orders yet they do not want to persist millions of records directly in Salesforce. NTO has asked the data architect to evaluate SF

connect and the concept of data verification. Which 3 considerations are needed prior to a SF Connect implementation?
Choose 3 answers:

- A. Identify the external tables to sync into external objects
- B. Develop an object relationship strategy.
- C. Assess whether the external data source is reachable via an ODATA endpoint.
- D. Create a 2nd system Admin user for authentication to the external source.
- E. Configure a middleware tool to poll external table data

Answer: A,B,C

Explanation:

The three considerations needed prior to a SF Connect implementation are to develop an object relationship strategy, identify the external tables to sync into external objects, and assess whether the external data source is reachable via an ODATA endpoint. SF Connect is a feature that allows integrating external data sources with Salesforce using external objects. External objects are similar to custom objects, but they store metadata only and not data. They enable on-demand access to external data via standard Salesforce APIs and user interfaces. To implement SF Connect, a data architect needs to consider how the external objects will relate to other objects in Salesforce, which external tables will be exposed as external objects, and whether the external data source supports ODATA protocol for data access.

NEW QUESTION # 84

Universal Containers (UC) has several custom Visualforce applications have been developed in which users are able to edit Opportunity records. UC struggles with data completeness on their Opportunity records and has decided to make certain fields required that have not been in the past. The newly required fields are dependent on the Stage of the Opportunity, such that certain fields are only required once an Opportunity advances to later stages. There are two fields. What is the simplest approach to handle this new requirement?

- A. Update the Opportunity page layout to mark these fields as required.
- B. Write an Apex trigger that checks each field when records are saved.
- C. Update these Opportunity field definitions in Setup to be required.
- D. Use a validation rule for each field that takes the Stage into consideration.

Answer: D

NEW QUESTION # 85
