CWDP-305 Test Valid & New CWDP-305 Test Prep
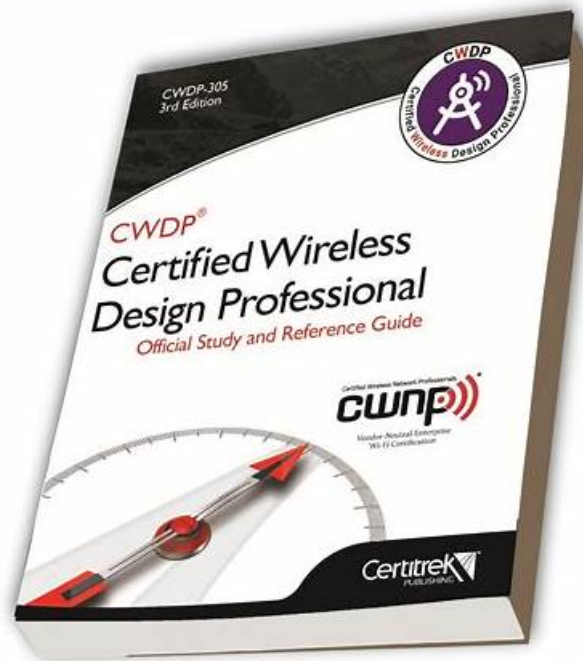

We know deeply that a reliable CWDP-305 exam material is our company's foothold in this competitive market. High accuracy and high quality are the most important things we always looking for. Compared with the other products in the market, our CWDP-305 latest questions grasp of the core knowledge and key point of the real exam, the targeted and efficient Certified Wireless Design Professional study training dumps guarantee our candidates to pass the test easily. Our CWDP-305 Latest Questions is one of the most wonderful reviewing Certified Wireless Design Professional study training dumps in our industry, so choose us, and together we will make a brighter future.

CWNP CWDP-305 Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy the WLAN: This section of the exam measures the skills of a WLAN Implementation Specialist and involves overseeing the deployment phase of wireless networks. It focuses on understanding deployment procedures for various WLAN architectures, configuring supporting infrastructure, and verifying proper installation. The section also addresses physical installation checks, documentation handover, and quality assurance practices during ongoing installations.
Topic 2	• Define Specifications for the WLAN: This section of the exam measures the skills of a Wireless Network Planner and focuses on gathering business and technical requirements needed for designing wireless LANs. It includes understanding user needs, regulatory and safety constraints, and environmental factors. Candidates are expected to identify critical elements such as coverage, capacity, security, and device compatibility, and to analyse existing infrastructure and documentation to ensure a successful design strategy.

Topic 3	• Design the WLAN: This section of the exam measures the skills of a WLAN Design Engineer and covers the process of selecting configurations, architecture types, and wireless components to meet business and technical requirements. It includes using design software, selecting access points and antennas, and applying methodologies such as predictive or measured design. Candidates must demonstrate the ability to produce effective documentation and configure features like QoS, roaming security, and network services for different types of client devices and applications.
Topic 4	• Validate and Optimize the WLAN: This section of the exam measures the skills of a WLAN Optimization Specialist and assesses the ability to test, validate, and fine-tune wireless networks post-deployment. Key tasks include RF validation surveys, performance testing, troubleshooting connectivity and security issues, and applying appropriate physical or RF adjustments. It also involves client testing and final project handover, including documentation, knowledge transfer, and meetings to ensure long-term WLAN success.

CWNP Certified Wireless Design Professional Sample Questions (Q141-Q146):

NEW QUESTION # 141
What differences exist between VLANs in wireless and wired domains?
Response:

- A. Wireless VLANs are never carried in 802.11 frames that cross the wireless medium. VLAN identifiers are always carried in Ethernet frames to indicate the proper VLAN.
- B. Wireless VLANs are not effective for segmenting the available services and network permissions available to clients. Wired VLANs are effective for this purpose.
- C. Wireless VLANs are ineffective for utilizing a single set of infrastructure equipment to provide different services to different client groups. Wired VLANs are effective for this purpose.
- D. Wireless VLANs do not always segment traffic into separate broadcast domains on the wireless medium. Wired VLANs do segment broadcast domains on the wired network.

Answer: D

NEW QUESTION # 142
After deploying a 5 GHz-only WLAN infrastructure in the USA, using 20 MHz channel widths and all 25 available channels, a manager tests the Guest SSID on his 802.11n tablet. During testing, he experiences several areas with poor RSSI (below -80 dBm) or no signal at all. Upon checking, all APs are operational, and coverage was validated post-deployment. What is the likely cause of this issue?

- A. His tablet doesn't support MU-MIMO
- B. His tablet does not support one or more of the 5 GHz channels
- C. His tablet doesn't support the 5 GHz band
- D. His tablet only supports a 40 MHz channel-width

Answer: B

Explanation:

This issue arises due to partial support for 5 GHz channels by some client devices. Although the infrastructure may use all 25 available 5 GHz channels in the U.S. (spanning UNII-1 through UNII-3 and DFS channels), many older 802.11n tablets and clients only support a subset of these channels-commonly the lower UNII-1 band (channels 36-48). As a result, even though the APs are operational and signal coverage is valid overall, the client may not see or associate with APs operating on unsupported 5 GHz channels such as channels 52-
64 or DFS channels (100-144).
This leads to inconsistent connectivity or lack of signal in areas where APs are broadcasting on unsupported channels. The CWDP-305 Study Guide advises taking client capability into account during design validation and includes best practices for mapping expected device support versus operational channel plans.

NEW QUESTION # 143
When using a predictive design tool, you have selected access points (APs) with an antenna gain of 3 dBi and set the transmit power to 25 mW. What is the EIRP (Effective Isotropic Radiated Power) of the APs in this design?

- A. 11 dBm
- B. 17 dBm
- C. 6.25 mW
- D. 125 mW

Answer: B

NEW QUESTION # 144
As an implementation engineer, you have just received initial design specs from a network designer for your dual-band 802.11n deployment. The network design documents prescribe the following data rate configuration for the 2.4 GHz radio:
Basic Rates 5.5, 6, 11, 12 Mbps
Supported Rates 9, 18, 24, 36, 48, and 54 Mbps as well as MCS 0-15
What will result from this design strategy?

- A. HR/DSSS (802.11b) stations will not be able to associate to the service set.
- B. Protection mechanisms will always be in use on this network to support 5.5 and 11 Mbps as basic rates.
- C. By disabling support for 1 and 2 Mbps while allowing 5.5 and 11 Mbps, the network will force 802.11b clients to use these higher data rates.
- D. This configuration violates the IEEE specification that defines 6, 12, and 24 Mbps as mandatory data rates for 802.11g/n.

Answer: C

NEW QUESTION # 145
After deploying a 5 GHz-only WLAN infrastructure in the USA, using 20 MHz channel widths and all 25 available channels, a manager tests the Guest SSID on his 802.11n tablet. During testing, he experiences several areas with poor RSSI (below -80 dBm) or no signal at all. Upon checking, all APs are operational, and coverage was validated post-deployment. What is the likely cause of this issue?

- A. His tablet doesn't support MU-MIMO
- B. His tablet does not support one or more of the 5 GHz channels
- C. His tablet doesn't support the 5 GHz band
- D. His tablet only supports a 40 MHz channel-width

Answer: B

NEW QUESTION # 146
......

One CWNP certification will help you get highly favor of large enterprises, it will bring you better opportunities. CWDP-305 valid exam dumps PDF will be a stepping-stone for you to success. The most important method for passing exams is targeted learning and

preparing. Programmatic learning may make you know professional knowledge better. But it will not only cost a lot of your time and energy but also can't guarantee you pass. Our CWDP-305 Valid Exam Dumps PDF can help you pass exam for sure.
