

Ping Identity PAP-001 Practice Exams, Exam PAP-001 Question

P.S. Free & New PAP-001 dumps are available on Google Drive shared by Real4test: <https://drive.google.com/open?id=1zAdPqs4EbHgLf3uptjttEkbk1TEjER>

If you possess a certificate, it can help you enter a better company and improve your salary. PAP-001 exam braindumps of us will help you obtain your certificate successfully. We are a professional certificate exam materials provider, and we have rich experiences in offering high-quality exam materials. In addition, we have a professional team to collect and research the latest information for PAP-001 Exam Dumps. We offer you free update for 365 days, so that you can obtain the latest information for the exam. And the latest version for PAP-001 exam barindumps will be sent to your email automatically.

Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.
Topic 2	<ul style="list-style-type: none">General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.
Topic 3	<ul style="list-style-type: none">Policies and Rules: This section of the exam measures the skills of Security Administrators and focuses on how PingAccess evaluates paths for applying policies and resources. It covers the role of different rule types, their configuration, and the implementation of rule sets and rule set groups for consistent policy enforcement.

Best Professional Ping Identity PAP-001 Practice Exams - PAP-001 Free Download

No study materials can boost so high efficiency and passing rate like our PAP-001 exam reference when preparing the test PAP-001 certification. Our PAP-001 exam practice questions provide the most reliable exam information resources and the most authorized expert verification. Our test bank includes all the possible questions and answers which may appear in the real exam and the quintessence and summary of the exam papers in the past. We strive to use the simplest language to make the learners understand our PAP-001 Exam Reference and passed the PAP-001 exam.

Ping Identity Certified Professional - PingAccess Sample Questions (Q62-Q67):

NEW QUESTION # 62

An administrator is integrating a new PingAccess Proxied Application for which the target site uses a certificate issued by a publicly trusted Certificate Authority.

How should the administrator configure PingAccess to trust the target site?

- A. Import the certificate chain into Key Pairs and add it to a Trusted Certificate Group
- **B. Configure the PingAccess Site to use the Java Trust Store Certificate Group**
- C. Drop the certificate chain into a Trusted Certificate Group
- D. Import the certificate chain into Key Pairs

Answer: B

Explanation:

Publicly trusted Certificate Authorities are already included in the Java Trust Store Certificate Group, which PingAccess can use directly. This avoids importing the certificate manually.

Exact Extract:

"If the target site uses a certificate from a well-known public CA, configure the site to use the Java Trust Store Certificate Group."

* Option A is incorrect - Key Pairs store private keys for SSL termination, not public CA trust anchors.

* Option B is correct - Java Trust Store already contains trusted public CAs.

* Option C is incorrect - again, Key Pairs are not used for trust validation.

* Option D is unnecessary for public CAs - only internal/self-signed certs must be imported.

Reference: PingAccess Administration Guide - Trusted Certificate Groups

NEW QUESTION # 63

What is the purpose of the `engine.ssl.protocols` in the `run.properties` file?

- A. To configure the supported HTTPS port
- B. To configure SSL protocols used for clustering
- **C. To configure the supported TLS versions**
- D. To configure the supported ciphers

Answer: C

Explanation:

The property `engine.ssl.protocols` in `run.properties` specifies the TLS protocol versions that PingAccess engines will support for incoming HTTPS traffic.

Exact Extract:

"The `engine.ssl.protocols` property configures which TLS versions are enabled for HTTPS listeners."

* Option A (ciphers) is incorrect - cipher suites are defined separately, not in this property.

* Option B (HTTPS port) is incorrect - the port is defined in the engine listener, not here.

* Option C (TLS versions) is correct - this property controls TLS version support (e.g., TLSv1.2, TLSv1.3).

* Option D (clustering) is incorrect - clustering does not depend on this property.

Reference: PingAccess Administration Guide - `run.properties` settings

NEW QUESTION # 64

A protected web application requires that additional attributes be provided once the user is authenticated. Which two steps must the administrator perform to meet this requirement? (Choose 2 answers.)

- A. Request that the token provider update the access token with the additional attributes.
- **B. Update the Web Session.**
- **C. Update the Identity Mapping.**
- D. Update the Site Authenticator.
- E. Request that the token provider update the ID token with the additional attributes.

Answer: B,C

Explanation:

When applications require additional attributes:

- * The Web Session must be configured to retrieve those attributes from the token provider (OIDC or PingFederate).
- * The Identity Mapping must be updated to forward those attributes to the application (e.g., as headers).

Exact Extract:

"Web sessions define how user attributes are retrieved from the token provider. Identity mappings determine how those attributes are inserted into requests to applications."

- * Option A is not necessarily required; attributes can be retrieved via userinfo endpoint or access token, not only ID tokens.
 - * Option B is correct - Identity Mappings must be updated to pass attributes to the app.
 - * Option C is incorrect - Site Authenticators define how PingAccess authenticates to apps, not attribute handling.
 - * Option D is incorrect unless the architecture specifically requires access token updates; PingAccess often uses the Web Session to fetch attributes.
 - * Option E is correct - Web Session must be updated to retrieve additional attributes.
- Reference: PingAccess Administration Guide - Web Sessions and Identity Mapping

NEW QUESTION # 65

An administrator is setting up a new PingAccess cluster with the following:

- * Administrative node hostname: pa-admin.company.com
- * Replica administrative node hostname: pa-admin2.company.com

Which two options in the certificate would be valid for the administrative node key pair? (Choose 2.)

- A. Issuer = pa-admin.company.com
- B. Subject = pa-admin.company.com
- **C. Subject = *.company.com**
- D. Subject = pa-admin2.company.com
- **E. Subject Alternative Names = pa-admin.company.com, pa-admin2.company.com**

Answer: C,E

Explanation:

Exact Extract (from PingAccess documentation):

"The key pair that you create for the CONFIG QUERY listener must include both the administrative node and the replica administrative node. To make sure the replica administrative node is included, you can either use a wildcard certificate or define subject alternative names in the key pair that use the replica administrative node's DNS name." Why B and D are correct:

* **B. Subject = *.company.com** - A wildcard certificate for *.company.com is valid for both pa-admin.company.com and pa-admin2.company.com, satisfying the documented requirement that the key pair include both hostnames for the CONFIG QUERY listener.

* **D. Subject Alternative Names = pa-admin.company.com, pa-admin2.company.com** - Explicitly placing both DNS names in the SAN extension also satisfies the requirement that the certificate cover both the administrative node and the replica administrative node.

Why the other options are incorrect:

* **A. Issuer = pa-admin.company.com** - The Issuer field identifies the certificate authority (CA) that signed the certificate, not the service hostname. Setting the issuer to a host value is not how X.509 server certificates are validated and would not meet the hostname matching requirement.

* **C. Subject = pa-admin.company.com** - While this covers the administrative node, it does not include the replica administrative node. Without a wildcard or SAN entries, it fails the requirement that the key pair include both hostnames.

* **E. Subject = pa-admin2.company.com** - Similarly, this would only cover the replica administrative node and not the primary

administrative node, failing the requirement.

NEW QUESTION # 66

Where should an administrator adjust SameSite Cookie settings?

- A. Web Sessions
- B. Rules
- C. Applications
- D. Sites

Answer: A

Explanation:

The SameSite attribute is applied to session cookies to control cross-site behavior. In PingAccess, session cookie configuration (including SameSite) is defined at the Web Session level.

Exact Extract:

"Web session configuration includes cookie attributes such as name, domain, secure flag, HTTPOnly, and SameSite."

* Option A (Rules) is incorrect - rules govern access control, not cookies.

* Option B (Sites) defines backend connections, not session cookies.

* Option C (Applications) ties resources to sessions but does not define cookie behavior.

* Option D (Web Sessions) is correct - session cookie SameSite settings are configured here.
