

Pass Guaranteed Quiz 2026 JN0-351: Trustable Enterprise Routing and Switching, Specialist (JNCIS-ENT) Valid Vce

P.S. Free 2026 Juniper JN0-351 dumps are available on Google Drive shared by DumpStillValid: <https://drive.google.com/open?id=1IJXHNxEBiduMEXra0X59CW7nOyWe0ozZ>

The clients can consult our online customer service before and after they buy our Enterprise Routing and Switching, Specialist (JNCIS-ENT) guide dump. We provide considerate customer service to the clients. Before the clients buy our JN0-351 cram training materials they can consult our online customer service personnel about the products' version and price and then decide whether to buy them or not. After the clients buy the JN0-351 study tool they can consult our online customer service about how to use them and the problems which occur during the process of using. If the clients fail in the test and require the refund our online customer service will reply their requests quickly and deal with the refund procedures promptly. In short, our online customer service will reply all of the clients' questions about the JN0-351 cram training materials timely and efficiently.

To pass Juniper JN0-351 certification exam seems to be a very difficult task. Having registered JN0-351 test, are you worrying about how to prepare for the exam? If so, please see the following content, I now tell you a shortcut through the JN0-351 Exam. The certification training dumps that can let you pass the test first time have appeared and it is DumpStillValid Juniper JN0-351 exam dumps. If you would like to sail through the test, come on and try it.

Juniper JN0-351 Study Reference, JN0-351 Hot Spot Questions

Our JN0-351 study tool boost three versions for you to choose and they include PDF version, PC version and APP online version. Each version is suitable for different situation and equipment and you can choose the most convenient method to learn our JN0-351 test torrent. For example, APP online version is printable and boosts instant access to download. You can study the JN0-351 Guide Torrent at any time and any place. The PC version of JN0-351 study tool can stimulate the real exam's scenarios. We provide 365-days free update and free demo available.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q68-Q73):

NEW QUESTION # 68

Which two statements about BGP facilitate the prevention of routing loops within an autonomous system? (Choose two.)

- A. Routes learned from IBGP neighbors are only advertised to other IBGP neighbors.
- B. IBGP sessions must be configured as a logical full mesh.

- C. iBGP sessions must be configured as a physical full mesh.
- D. Routes learned from iBGP neighbors are not readvertised to other iBGP neighbors.

Answer: B,D

Explanation:

BGP has a simple loop prevention mechanism for eBGP that checks the AS path for its own AS number.

However, this mechanism does not work for iBGP, since all routers in the same AS have the same AS number. Therefore, iBGP has two additional rules to prevent routing loops within an autonomous system:

A router does not advertise a route learned from an iBGP neighbor to another iBGP neighbor. This rule ensures that a route does not loop back to the original iBGP router through another iBGP path.

A router does not accept a route learned from an iBGP neighbor if the next hop is not reachable via an IGP.

This rule ensures that a router does not forward packets to an unreachable next hop.

These two rules imply that iBGP sessions must be configured as a logical full mesh, meaning that every iBGP router must have a direct iBGP session with every other iBGP router in the same AS. This way, every iBGP router can learn the best route from the eBGP routers and use the IGP to reach the next hop. A logical full mesh does not require a physical full mesh, meaning that iBGP routers do not have to be directly connected.

They can use intermediate routers to establish iBGP sessions, as long as the IGP can reach the next hop.

A logical full mesh can be challenging to scale and maintain, especially for large ASes with many iBGP routers. Therefore, some alternatives to the full mesh requirement have been developed, such as route reflectors and confederations. These alternatives relax the iBGP rules and introduce additional attributes and mechanisms to prevent routing loops, such as originator ID and cluster list.

Loop Prevention in BGP Routing

NEW QUESTION # 69

You deployed a new EX Series switch with DHCP snooping enabled and you do not see any entries in the snooping databases for an interface. Which two Juniper configurations for that interface caused this issue? (Choose two.)

- A. MAC limiting is enabled on the interface.
- B. The interface is configured as a disabled port.
- C. The interface is configured as a trunk port.
- D. Dynamic ARP inspection is enabled on the interface.

Answer: B,C

Explanation:

A is correct because the interface is configured as a disabled port. A disabled port does not forward any traffic, including DHCP packets. Therefore, DHCP snooping cannot learn any MAC addresses or lease information from a disabled port.

C is correct because the interface is configured as a trunk port. By default, all trunk ports on the switch are trusted for DHCP snooping. This means that DHCP snooping does not inspect or filter any DHCP packets received on a trunk port. Therefore, DHCP snooping does not add any entries to the snooping database for a trunk port.

NEW QUESTION # 70

Which two statements about the firewall filter terms shown in the exhibit are true? (Choose two.)

```

[edit firewall]
user@switch# show
family ethernet-switching {
  filter mac-address {
    term one {
      from {
        source-mac-address 88:05:00:29:3c:de/48;
      }
      then {
        log;
      }
    }
    term two {
      then accept;
    }
  }
}

```

- A. Traffic that matches the fromstatement in term oneis discarded.
- B. All traffic not matching the fromstatement in term oneis accepted by term two.
- C. Traffic matching the fromstatement in term twois logged.
- D. Traffic that matches the fromstatement in term oneis accepted.

Answer: B,D

NEW QUESTION # 71

You are asked to explore deploying IS-IS in your network. What are two considerations in this scenario? (Choose two.)

- A. TLVs are not required to support IPv4 reachability.
- B. TLVs are required to support IPv6 reachability.
- C. TLVs are required to support IPv4 reachability.
- D. TLVs are not required to support IPv6 reachability.

Answer: B,C

NEW QUESTION # 72

Which two statements are correct about using firewall filters on EX Series switches? (Choose two.)

- A. You can apply firewall filters to both Layer 2 and Layer 3 traffic on an EX Series switch.
- B. You can deploy both stateless and stateful firewall filters on an EX Series switch.
- C. You can only apply firewall filters to Layer 2 traffic on an EX Series switch.
- D. You can deploy only stateless firewall filters on an EX Series switch.

Answer: A,D

Explanation:

A is correct because you can deploy only stateless firewall filters on an EX Series switch. A stateless firewall filter is a filter that evaluates each packet individually based on the header information, such as source and destination addresses, protocol, and port numbers. A stateless firewall filter does not keep track of the state or context of a packet flow, such as the sequence number, flags, or session information. EX Series switches support only stateless firewall filters, which are also called access control lists (ACLs) or packet filters.

C is correct because you can apply firewall filters to both Layer 2 and Layer 3 traffic on an EX Series switch. Layer 2 traffic is traffic that is switched within a VLAN or a bridge domain, while Layer 3 traffic is traffic that is routed between VLANs or networks. EX Series switches support three types of firewall filters: port (Layer 2) firewall filters, VLAN firewall filters, and router (Layer 3) firewall filters. You can apply these filters to different interfaces and directions to control the traffic entering or exiting the switch.

NEW QUESTION # 73

.....

However, preparing for the JN0-351 exam is not an easy job until they have real Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) exam questions that are going to help them achieve this target. They have to find a trusted source such as DumpStillValid to reach their goals. Get JN0-351 Certified, and then apply for jobs or get high-paying job opportunities. If you think that JN0-351 certification exam is easy to crack, you are mistaken.
