Microsoft Azure Administrator Sample Questions (Q99-Q104):

NEW QUESTION # 99
You have an Azure subscription named Sub1.
You plan to deploy a multi-tiered application that will contain the tiers shown in the following table.

Tier	Accessible from the Internet	Number of virtual machines
Front-end web server	Yes	10
Business logic	No	100
Microsoft SQL Server database	No	5

You need to recommend a networking solution to meet the following requirements:
* Ensure that communication between the web servers and the business logic tier spreads equally across the virtual machines.
* Protect the web servers from SQL injection attacks.
Which Azure resource should you recommend for each requirement? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Ensure that communication between the web servers and the business logic tier spreads equally across the virtual machines:
- an application gateway that uses the Standard tier
- an application gateway that uses the WAF tier
- an internal load balancer
- a network security group (NSG)
- a public load balancer

Protect the web servers from SQL injection attacks:
- an application gateway that uses the Standard tier
- an application gateway that uses the WAF tier
- an internal load balancer
- a network security group (NSG)
- a public load balancer

Answer:

Explanation:

Explanation:

Box 1: an internal load balancer

Azure Internal Load Balancer (ILB) provides network load balancing between virtual machines that reside inside a cloud service or a virtual network with a regional scope.

Box 2: an application gateway that uses the WAF tier

Azure Web Application Firewall (WAF) on Azure Application Gateway provides centralized protection of your web applications from common exploits and vulnerabilities. Web applications are increasingly targeted by malicious attacks that exploit commonly known vulnerabilities.

NEW QUESTION # 100

You have an azure subscription that contains the resources shown in the following table.

You create a public IP address named IPI.

Which two resources can you associate to IP1.

Each correct answer presents a complete solution

NOTE: Each correct selection is worth one point

- A. LB1
- B. VM1
- C. NIC1
- D. VNet1
- E. VPN1

Answer: A,B

Explanation:

B: NIC1 (Network Interface): Public IP addresses are directly associated with network interfaces. This allows the virtual machine connected to that interface to communicate with the internet.

D: LB1 (Load Balancer): Load balancers can have a public IP address assigned to their frontend configuration. This allows external traffic to reach the load balancer, which then distributes it to the backend VMs.

- B. Disable Advanced threat protection
- C. Remove the lock
- D. Set the access tier to Hot

Answer: A
