It also explains the difference between Business Central Online and Business Central on-premises features.
Topic 3	<ul style="list-style-type: none"> Install, develop, and deploy for Business Central: It delves into the installation and configuration of a Business Central development environment. Moreover, it discusses creating, debugging, and deploying an extension in Business Central.
Topic 4	<ul style="list-style-type: none"> Work with development tools: Implementing semi-automated test processes and managing and assessing telemetry are its sub-topics.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q79-Q84):

NEW QUESTION # 79

You are treating an app for Business Central.

You plan to specify the following parameters and properties of the server and app.

* Startup object type and object ID

* Runtime

* Dependencies

You need to configure the JSON file for the specified parameters and properties Which JSON files should you configure? To answer, move the appropriate files to the correct object purposes You may use each file once, more than once, or not at all You may need to move the split bar between panes or scroll to view content NOTE Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 80

A company has an on-premises Business Central instance named TEST The instance uses Windows authorization and a developer services port of 7149 Visual Studio Code is installed on the same server.

You create a new AL project but cannot download the symbols.

The launch.json file contains the following code:

You need to download the symbols.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Change the server Instance parameter to TEST
- B. Check which server the instance is installed on and replace http://localhost with the correct IP address.
- C. Add the port: 7149 parameter.
- D. Change the name parameter to TEST.
- E. Change the authentication parameter to UserPassword.

Answer: A,C

Explanation:

You are working on an on-premises Business Central instance and unable to download symbols for a new AL project. The current configuration in launch.json does not allow you to download symbols, and you need to make corrections.

Key Points in the Scenario:

* Instance name is TEST.

* Developer services port is 7149.

* Windows authentication is being used.

Correct Answers:

* A. Change the server Instance parameter to TEST.

* The serverInstance parameter must match the name of the Business Central instance, which is TEST in this scenario. You need to modify this to reflect the correct instance name.

* B. Add the port: 7149 parameter.

* Since the developer services are using port 7149, you need to specify this in the launch.json file by adding the port parameter with the value 7149.

Incorrect Options:

* C. Change the name parameter to TEST: The name parameter is just a label and does not affect downloading symbols, so changing this won't help.

* D. Change the authentication parameter to UserPassword: The authentication method is already set to Windows, which is valid for this scenario. Changing it to UserPassword is unnecessary unless specified by the system.

* E. Check which server the instance is installed on and replace http://localhost with the correct IP address: Since the server is on the same machine as Visual Studio Code (as specified), localhost is correct.

NEW QUESTION # 81

You are creating a view for a Business Central app.

The view requires a custom layout that displays only customer records with a balance greater than 500 in local currency.

You need to configure the view to specify that it has a custom layout.

Which property combination should you use?

- A. SharedLayout = true; Filters - where ("Balance (ICY)" - filter (> 500));
- **B. SharedLayout - true; Filters - where (Balance > filter (> 500), "Currency Code" - filter ("LCY"));**
- C. SharedLayout - false; Filters - where ("Balance (ICY)" - filter (> 500));
- D. shareLayout = false; Filters = where (Balance = filter (> 500), "Currency Code" = filter ("ICY*));

Answer: B

Explanation:

SharedLayout = true allows for the layout to be shared across views, and it is often used when defining a custom layout that should follow specific filtering conditions.

The Filters property specifies the exact filter criteria for the view, in this case, filtering on Balance > 500 and the Currency Code = LCY (local currency).

A uses incorrect filter syntax and shareLayout = false, which doesn't allow the layout to be shared, so it's not ideal for this use case.

C and D both have issues with the filter syntax and do not use proper Currency Code filtering or share layout settings.

For more details, check Creating Views in Business Central.

NEW QUESTION # 82

A company plans to meet new regulatory requirements.

The regulator has issued new tax tiers.

You need to update the base application table by using a table extension.

Which table field property can you change?

- A. CalcFormula
- B. DecimalPlaces
- C. AutoFormatType
- **D. BlankZero**

Answer: D

Explanation:

When updating the base application table using a table extension in Microsoft Dynamics 365 Business Central, certain properties of table fields can be modified to meet new requirements, such as regulatory changes. The DecimalPlaces property (B) is one such property that can be adjusted in a table extension. This property determines the number of decimal places that are displayed and stored for decimal fields in the table.

Adjusting the DecimalPlaces property can be particularly useful when dealing with financial data and tax calculations that require precision to meet new tax tiers set by a regulator. It's important to note that not all properties can be modified in a table extension; for example, the CalcFormula property (A) cannot be changed as it affects how the field's value is calculated, which could have significant implications on the base application's logic.

NEW QUESTION # 83

You are developing a test application to test the posting process of a sales order. You must provide the following implementation:

* Specify the value of post options (dialog: Ship, Invoice, Ship & Invoice) as Invoice.

* Perform calculations and values checking.

You need to complete the development of the test code unit.

Which methods should you use? To answer, move the appropriate methods to the correct implementation.

You may use each method once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
