SAP C-CPI-2506 Latest Study Guide, Certification C-CPI-2506 Exam Cost

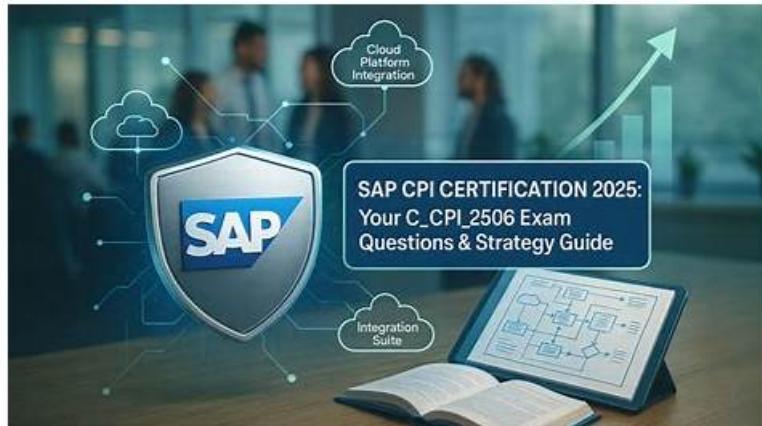

What's more, part of that Itbraindumps C-CPI-2506 dumps now are free: https://drive.google.com/open?id=1ZAfBa9riSUgWzEN79ryXH9p6ufw8-gsh

So it requires no special plugins. The web-based SAP Certified Associate - Integration Developer (C-CPI-2506) practice exam software is genuine, authentic, and real so feel free to start your practice instantly with SAP Certified Associate - Integration Developer (C-CPI-2506) practice test. It would be really helpful to purchase SAP Certified Associate - Integration Developer (C-CPI-2506) exam dumps right away. If you buy this SAP Certification Exams product right now, we'll provide you with up to 1 year of free updates for SAP Certified Associate - Integration Developer (C-CPI-2506) authentic questions. You can prepare using these no-cost updates in accordance with the most recent test content changes provided by the SAP Certified Associate - Integration Developer (C-CPI-2506) exam dumps.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 2	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 3	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

If you prefer studying at home for the C-CPI-2506 Exam, we have got you covered. Itbraindumps offers C-CPI-2506 exam questions in PDF format, which can be easily downloaded and accessed on all your devices. Moreover, the SAP C-CPI-2506 Actual Questions PDF file will be available for immediate download right after your purchase, eliminating any waiting time.

SAP Certified Associate - Integration Developer Sample Questions (Q33-Q38):

NEW QUESTION # 33

You configured a content modifier as follows: Action Create. Name: ProductID. Source Type: XPath. Source Value: //ProductID. Data Type: java lang string. After testing the content modifier, you receive an error message that contains the following fragment: java.lang.ClassNotFoundException java lang string. What caused the error message?

- A. Incorrect data type
- B. Incorrect source type
- C. Incorrect source value
- D. Incorrect name

Answer: A

Explanation:
The error message is caused by an incorrect data type in the content modifier configuration. The data type should be java.lang.String instead of java lang string. The data type defines the type of the value that will be stored in the header or property of the message. It should match one of the supported Java classes, such as java.lang.String, java.lang.Integer, java.lang.Boolean, and so on. If the data type is not valid, a java.lang.ClassNotFoundException will be thrown. Reference: Content Modifier | SAP Help Portal, Getting clear with SAP Integration Suite Content Modifier | SAP Blogs

NEW QUESTION # 34

Which messaging patterns does SAP Event Mesh support for asynchronous communication?

- A. Publish/subscribe and point-to-point messaging
- B. Publish/subscribe and request/reply messaging
- C. Point-to-point and multicast messaging
- D. Request/reply messaging and multicast messaging

Answer: A

Explanation:
SAP Event Mesh supports two key asynchronous messaging patterns:
Publish/Subscribe # Producers publish an event once, multiple subscribers consume independently.
Point-to-Point (Queue-based) # Messages sent from one producer to a single consumer via a queue.
Other options are incorrect:
Request/Reply # Synchronous pattern, not the focus of Event Mesh.
Multicast messaging # Not explicitly supported; handled through Pub-Sub.
Thus, Event Mesh supports Publish/Subscribe and Point-to-Point messaging patterns.

NEW QUESTION # 35

You want to publish a new API product to the API business hub enterprise. What is a requirement?

- A. At least one deployed API Provider
- B. At least two deployed API Proxies
- C. At least two deployed API Providers
- D. At least one deployed API Proxy

Answer: D

Explanation:
In SAP API Management (Integration Suite):

An API Product is a bundle of one or more API Proxies for consumption.
To publish an API Product to API Business Hub Enterprise (Developer Portal), there must be at least one deployed API Proxy included.
Other options:
API Providers are required for connecting to backends, but publishing requires proxies.
No minimum of two is required - just one deployed API Proxy is enough.

NEW QUESTION # 36

Which of the following XSL statements selects each node in the source XML?

- A. <xsl:template match="@*">
- B. <xsl:template match="text()">
- C. <xsl:template match="*">
- D. <xsl:template match="/*">

Answer: C

Explanation:
In XSLT mapping:
<xsl:template match="*"> # Matches each node (any element node) in the XML source.
<xsl:template match="/*"> # Matches only the root node.
<xsl:template match="@*"> # Matches all attributes of the current element.
<xsl:template match="text()"> # Matches text nodes only.
Thus, to select each node, the correct statement is <xsl:template match="*">.

NEW QUESTION # 37

You want to call an OData v4.0 interface through an adapter in the Cloud Integration capability within SAP Integration Suite. Which adapter can you use?

- A. SOAP
- B. HTTPS
- C. JMS
- D. ProcessDirect

Answer: B

Explanation:
You can use an HTTPS adapter to call an OData v4.0 interface in the Cloud Integration capability within SAP Integration Suite. An HTTPS adapter allows you to send and receive messages over HTTP or HTTPS protocols. You can use an HTTPS adapter to communicate with RESTful services, such as OData v4.0, that support HTTP methods and formats.
