Sharing-and-Visibility-Architect Verified Answers | Sharing-and-Visibility-Architect Latest Test Sample

All these three Prepare for your Salesforce Certified Sharing and Visibility Architect (Sharing-and-Visibility-Architect) exam questions formats are specifically designed for quick and complete Salesforce Sharing-and-Visibility-Architect exam preparation. The Sharing-and-Visibility-Architect PDF Dumps file is the collection of real, valid, and updated Prepare for your Salesforce Certified Sharing and Visibility Architect (Sharing-and-Visibility-Architect) exam practice test questions that are being presented in PDF format. This Salesforce Certified Sharing and Visibility Architect (Sharing-and-Visibility-Architect) PDF file comes with some top features such as being very easy to download and use.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q34-Q39):

NEW QUESTION # 34

A banking company wants their customers Date of Birth Field searchable by Banking Reps, but only editable by Customer Support Reps.

Which approach is recommended to meet this requirement?

- A. Add Date of Birth field to the Search layout of the Contact Object. Modify the Page layout assigned to Customer Support Rep and add Date of Birth field as Required.

- B. Create 2 Validation rule in the Data of Birth field so the rule returns true only when user.profilename matches Customer Support Rep.
- C. Set the Field Level Security for the Date of Birth field to be Visible to Customer Support Rep Profile, and set the Date of Birth field Visible and Readonly to Banking Rep profile.

Answer: C

Explanation:

* Field Level Security (FLS):

* FLS controls whether a field is visible or editable for a specific profile.

* Search layouts define which fields are searchable, independent of edit permissions.

* Why Option B is Correct:

* Setting FLS for the Banking Rep profile ensures the field is visible but read-only, while granting edit access to the Customer Support Rep profile aligns with the requirement.

* Why Others Are Incorrect:

* Option A: Validation rules are not a scalable solution for controlling field access.

* Option C: Search layout settings do not control field-level visibility or edit permissions.

For details, refer to Salesforce FLS documentation: <https://help.salesforce.com/>

NEW QUESTION # 35

Universal Containers (UC) has a team that analyzes customer orders looking for fraud. This team needs access to Invoice records (Custom object, Private OWD). UC \as complex rules to control users' access. The Salesforce Architect recommended using Apex managed sharing to meet these requirements.

Which two recommendations should a Salesforce Developer consider when implementing the changes? Choose 2 answers

- A. Use "With Sharing" keyword to enforce field-level security.
- B. Use "Without Sharing" keyword to make sure record visibility will be considered.
- C. Use "With Sharing" keyword to make sure record visibility will always be considered.
- D. Use runAs system method to test different users accessing these records.

Answer: C,D

Explanation:

Explanation

To implement Apex managed sharing, a Salesforce Developer should consider using the with Sharing keyword and the runAs system method. The with Sharing keyword ensures that the Apex class respects the record visibility rules of the current user context, which can help prevent unauthorized access to records that are not shared with the user¹. The runAs system method allows testing the code as different users with different profiles and permissions, which can help verify that the sharing logic is working as expected².

NEW QUESTION # 36

In order to comply with Regulatory Requirements, Universal Containers must store sensitive customer information on-premise. Universal Containers would like this on-premise information to be accessible from Salesforce. What technology can Universal Containers use to achieve this?

- A. Implement a third-party proxy server.
- B. Implement an on-premise database.
- C. Implement the Salesforce Shield toolkit.
- D. Implement a third-party tokenization service.

Answer: A

Explanation:

Explanation

Implementing a third-party proxy server is the best technology to achieve the requirement of accessing on-premise information from Salesforce. A proxy server acts as an intermediary between Salesforce and the on-premise database, and it can handle authentication, encryption, and data transformation. Option A is incorrect, as tokenization is a technique to replace sensitive data with tokens, not to access on-premise data.

Option B is incorrect, as it does not specify how Salesforce can connect to the on-premise database. Option D is incorrect, as Salesforce Shield is a set of tools to enhance data security and compliance in Salesforce, not to access external data sources.

NEW QUESTION # 37

Universal Containers has a strict security model enforced through object, field, and row-based security mechanisms. The Architect would like to ensure the security model is being thoroughly tested using Apex automated tests. Which three considerations should be made when using the runAs() method to design Apex unit tests?

- A. runAs() can be used inside of test classes to validate field-level permissions
- B. runAs() does not enforce user permissions or field-level permissions in test classes
- C. runAs () counts towards total DML statements issued within transaction
- D. runAs() can be used outside of test classes to bypass record-level security
- E. runAs() can be used inside of test classes to validate record-level security

Answer: B,C,E

Explanation:

Explanation

When using the runAs() method to design Apex unit tests, the architect should consider that runAs() does not enforce user permissions or field-level permissions in test classes, runAs() can be used inside of test classes to validate record-level security, and runAs() counts towards total DML statements issued within transaction.

These are important considerations to ensure that the test classes cover all possible scenarios and do not exceed governor limits. runAs() cannot be used outside of test classes to bypass record-level security, and runAs() cannot be used inside of test classes to validate field-level permissions

NEW QUESTION # 38

Universal Containers has just deployed a change to its role hierarchy. A manager is reporting that their staff can now see Accounts that they do not own and should not have access to. How should the Architect troubleshoot?

- A. While logged in as the one of the Staff members, navigate to a sample account and use the Sharing button to determine who has access.
- B. While logged in as the one of the Staff members, navigate to their user record and inspect their profile and role membership.
- C. While logged in as the System Administrator, use the Field Accessibility Viewer to view a matrix of who has access to Accounts.
- D. While logged in as the System Administrator, use the Field Accessibility Viewer to view a matrix of who has access to Accounts.

Answer: A

Explanation:

Explanation

To troubleshoot why staff members can see accounts that they do not own and should not have access to after a change in the role hierarchy, the architect should log in as one of the staff members, navigate to a sample account, and use the sharing button to determine who has access. The sharing button shows all the reasons why a user has access to a record, such as role hierarchy, sharing rules, manual sharing, teams, etc. The architect can then identify which sharing mechanism is causing the issue and fix it accordingly

NEW QUESTION # 39

.....

To want to pass Salesforce Sharing-and-Visibility-Architect certification test can't be done just depend on the exam related books. Instead of blindly studying relevant knowledge the exam demands, you can do some valuable questions. The efficient exam dumps is essential tool to prepare for Sharing-and-Visibility-Architect test. Come on and purchase VCE4Plus Salesforce Sharing-and-Visibility-Architect Practice Test dumps. This braindump's hit accuracy is high and it works best the other way around. VCE4Plus Salesforce Sharing-and-Visibility-Architect questions and answers are a rare material which can help you pass you exam first time.
