PDII-JPN Reasonable Exam Price - Reliable PDII-JPN Test Tips

Holding a certification in a certain field definitely shows that one have a good command of the PDII-JPN knowledge and professional skills in the related field. However, it is universally accepted that the majority of the candidates for the PDII-JPN exam are those who do not have enough spare time and are not able to study in the most efficient way. You can just feel rest assured that our PDII-JPN Exam Questions can help you pass the exam in a short time. With our PDII-JPN study guide for 20 to 30 hours, you can pass the exam confidently.

Salesforce Sample Questions (Q110-Q115):

NEW QUESTION # 110

開発者は、開発者サンドボックスで Visualforce ページを作成してテストしましたが、本番環境で使用するときにビューステートエラーが発生したというレポートを受け取りました。

開発者はこれらのエラーを修正するために何を確認する必要がありますか？

- A. プロパティがプライベートとしてマークされていることを確認します。
- B. 変数が一時的としてマークされていることを確認します。
- C. クエリがガバナ制限を正味で超えていないことを確認します。

- D. プロファイルが Visualforce ページにアクセスできることを確認します。

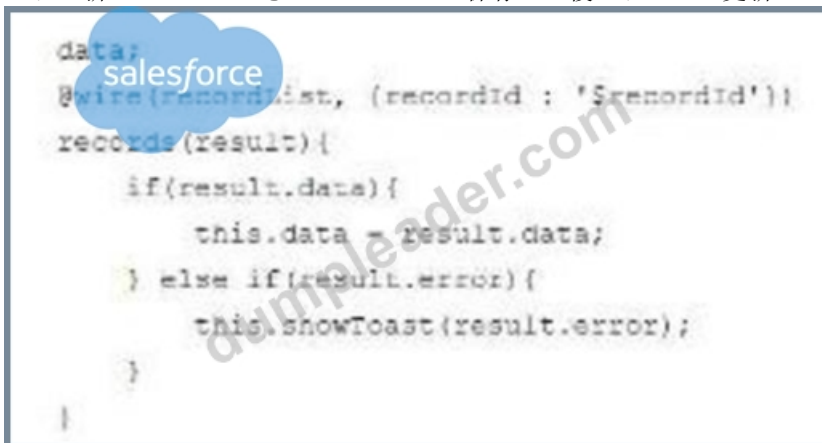

Answer: B

Explanation:

The developer should ensure variables are marked as transient to correct the view state errors. The transient keyword is used to mark a variable as transient, which means that the variable is not part of the view state, and it is not persisted or transferred between the server and the client. The developer should use the transient keyword for variables that are used for temporary storage or calculations, and that do not need to be retained across postbacks. This way, the developer can reduce the size of the view state, and avoid exceeding the view state limit. Ensuring queries do not exceed governor limits will not help, as it will only avoid hitting the SOQL query limit, but it will not reduce the size of the view state. Ensuring properties are marked as private will not help, as it will only limit the access to the properties, but it will not reduce the size of the view state. Ensuring profiles have access to the Visualforce page will not help, as it will only grant the permissions to view the page, but it will not reduce the size of the view state. Reference: [transient Keyword], [Visualforce View State], [Visualforce Developer Guide]

NEW QUESTION # 111

開発者は、Lightning データテーブル内のレコードのリストを表示する Lightning Web コンポーネントを作成しています。新しいレコードをデータベースに保存した後、リストが更新されません。

```

data;
@wire(recordList, {recordId: '$recordId'})
records(result) {
  if(result.data) {
    this.data = result.data;
  } else if(result.error) {
    this.showToast(result.error);
  }
}

```

これを実現するには、開発者は上記のコードの何を変更する必要がありますか？

- A. 結果を格納する変数を作成し、refresh Apex() を呼び出します。
- B. @track デコレータをデータ変数に追加します。
- C. this.data で refresh Apex() を呼び出します。
- D. 結果を保存する新しい変数を作成し、@track アノテーションを付けます。

Answer: A

NEW QUESTION # 112

開発者は、非同期プロセスのトリガーが正常に実行されたことをどのように確認する必要がありますか？

- A. テストクラスですべてのテストデータを作成し、Test.startTest() と Test.stopTest() を呼び出して、アサーションを実行します。
- B. Salesforce にレコードを挿入し、seeAllData=true を使用してから、アサーションを実行します。
- C. すべてのテストデータを作成し、残りのクラスで future を使用してから、アサーションを実行します。
- D. テストクラス内にすべてのテストデータを作成し、システムを使用します。{} を実行してトリガーを呼び出し、アサーションを実行します。

Answer: D

Explanation:

To assert that a trigger with an asynchronous process has successfully run, a developer should create all test data in the test class, use System.runAs() to invoke the trigger, then perform assertions. System.runAs() allows the developer to specify the user context to execute a specific block of code. This is useful for testing asynchronous processes that run in a different user context than the trigger, such as future methods, queueable apex, or batch apex. The developer can use System.runAs() to switch to the user context

that runs the asynchronous process and then perform assertions on the expected results. Reference: [System.runAs Method], [Testing Asynchronous Apex], [Testing the User Context]

NEW QUESTION # 113

会社にはカスタム オブジェクトがあります。リクエスト __c。これにはフィールド Completed__c があります。そして商談、Opportunity__c へのルックアップ。

完了した申請があるすべての商談レコードの一意のリストを取得する SOQL クエリはどれですか？

- A.

```
SELECT Opportunity__c FROM Request__c WHERE Id IN (SELECT Id FROM Request__c Where Completed__c = true)
```

- B.

```
SELECT Id FROM Opportunity WHERE Id IN (SELECT Id FROM Request__c WHERE Completed = true)
```

- C.

```
SELECT Id FROM Opportunity WHERE Id IN (SELECT Opportunity__c FROM Request__c WHERE Completed__c = true)
```

- D.

Answer: C

NEW QUESTION # 114

開発者は Salesforce と外部システム間の統合に取り組んでいます。統合には大量のデータを外部システムに送信する必要があるため、応答時間やタイムアウトが長くなる可能性があります。

パフォーマンスを最適化し、タイムアウトを回避するには、どの手法を使用する必要がありますか？

- A. コールアウト オプションのタイムアウト制限を増やします。
- B. チェーンされたバッチ Apex を使用して、データをより小さなバッチに分割します。
- C. @future アノテーションを使用してコールアウトを非同期にします。
- D. Continuation クラスを使用して非同期コールアウトを実装します。

Answer: D

Explanation:

Implementing an asynchronous callout using the Continuation class is the optimal solution to handle long response times and avoid timeouts in Salesforce. It allows the Apex code to make a long-running request to an external service and free up the thread to serve other requests.
