The MB-500 Exam covers a range of topics related to Dynamics 365 Finance and Operations, including the architecture and development environment, the data model and security model, and how to develop and deploy customizations and extensions. Candidates will also need to demonstrate their ability to integrate Dynamics 365 Finance and Operations with other systems, such as Office 365 and Power Platform.

Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q53-Q58):

NEW QUESTION # 53

You are a Dynamics 365 Finance developer. You have two tables as shown in the following exhibit:

You need to configure Table1 to ensure that records cannot be deleted from Table1 if Table2 contains related records. Which value should you use for the OnDelete property?

- A. None
- **B. Restricted**
- C. Cascade
- D. Cascade + Restricted

Answer: B

Explanation:

Example of Restricted

Suppose we have two tables (Customer & Order) and the relation is of One-To-Many i.e Customer can have many orders.

So on a parent table i.e.(Customer) if I set a delete action property to "RESTRICTED" for Order table. Then If I go and delete the record from a Customer table. It will first check the record in the child table and if exist that warning prompt saying that first we need to delete a record from child table.

2	Personalize the page.
3	Configure and embed the app.
4	Refresh the browser.

NEW QUESTION # 55

You are a Dynamics 365 Finance and Operations developer. You have the following code: (Line numbers are created for reference only.)

```
01 class TestQuestion
02 {
03     public static void main(Args _args)
04     {
05         TestQuestion testQuestion = new testQuestion();
06         testQuestion.run();
07     }
08     public void run()
09     {
10         TmpFrmVirtual tmpFrmVirtual;
11         str salesId;
12         int salesQty;
13         tmpFrmVirtual.Id = "SID1234";
14         salesQty = 5;
15         this.updateValues(tmpFrmVirtual, salesQty);
16         info(tmpFrmVirtual.Id);
17         info(salesQty);
18     }
19     public void updateValues(TmpFrmVirtual _tmpFrmVirtual, str _salesQty)
20     {
21         TmpFrmVirtual tmpFrmVirtual = _tmpFrmVirtual;
22         int salesQty = _salesQty;
23         tmpFrmVirtual.Id = "SID1234"-Updated";
24         salesQty = 10;
25     }
26 }
```

Which values does the info() method return? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Parameter	Value
tmpFrmVirtual.Id	<div>SID1234</div> <div>SID1234-Updated</div> <div>SID1234 SID1234-Updated</div>
salesQty	<div>5</div> <div>10</div> <div>15</div>

Answer:

SID1234-Updated	
SID1234 SID1234-Updated	

salesQty

	▼
5	
10	
15	

Box 1: SID1234

Parameters

All methods have their own scope. A method can take one or more parameters. Within the scope of the method, these parameters are treated as local variables and are initialized with a value from the parameter in the method call. All parameters are passed by value, which means that you can't change the value of the original variable. You can change only the local variable in the method. This local variable is a copy of the original variable.

Box 2: 5
