The AWS-Certified-Developer-Associate practice questions that are best for you will definitely make you feel more effective in less time. Selecting our AWS-Certified-Developer-Associate Study Materials is definitely your right decision. Of course, you can also make a decision after using the trial version. With our AWS-Certified-Developer-Associate real exam, we look forward to your joining.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q150-Q155):

NEW QUESTION # 150

A Developer has an application that can upload tens of thousands of objects per second to Amazon S3 in parallel within a single AWS account. As part of new requirements, data stored in S3 must use server side encryption with AWS KMS (SSE-KMS). After creating this change, performance of the application is slower.

Which of the following is MOST likely the cause of the application latency?

- A. Amazon S3 throttles the rate at which uploaded objects can be encrypted using Customer Master Keys.
- B. KMS requires that an alias be used to create an independent display name that can be mapped to a CMK.
- C. The AWS KMS API calls limit is less than needed to achieve the desired performance.
- D. The client encryption of the objects is using a poor algorithm.

Answer: C

NEW QUESTION # 151

A Developer wants to debug an application by searching and filtering log data. The application logs are stored in Amazon CloudWatch Logs. The Developer creates a new metric filter to count exceptions in the application logs. However, no results are returned from the logs.

What is the reason that no filtered results are being returned?

- A. Metric data points for logs groups can be filtered only after they are exported to an Amazon S3 bucket
- B. The log group for CloudWatch Logs should be first streamed to Amazon Elasticsearch Service before metric filtering returns the results
- C. CloudWatch Logs only publishes metric data for events that happen after the filter is created
- D. A setup of the Amazon CloudWatch interface VPC endpoint is required for filtering the CloudWatch Logs in the VPC

Answer: C

Explanation:

Explanation/Reference: <https://docs.aws.amazon.com/AmazonCloudWatch/latest/logs/MonitoringLogData.html>

NEW QUESTION # 152

A developer is migrating code to an AWS Lambda function that will access an Amazon Aurora MySQL database.

What is the MOST secure way to authenticate the function to the database?

- A. Store the database credentials in AWS Secrets Manager Let Secrets Manager handle the rotation of the credentials, as required
- B. Store the database credentials as encrypted parameters in AWS Systems Manager Parameter Store Obtain the credentials from Systems Manager when the Lambda function needs to connect to the database
- C. Store the database credentials in an Amazon S3 bucket that has a restrictive bucket policy for the Lambda role only when accessing the credentials Use AWS KMS to encrypt the data
- D. Create a policy with rds-db connect access to the database and attach it to the role assigned to the Lambda function

Answer: A

NEW QUESTION # 153

A developer is creating an AWS Serverless Application Model (AWS SAM) template. The AWS SAM template contains the definition of multiple AWS Lambda functions, an Amazon S3 bucket, and an Amazon CloudFront distribution. One of the Lambda functions runs on Lambda@Edge in the CloudFront distribution.

The S3 bucket is configured as an origin for the CloudFront distribution.

When the developer deploys the AWS SAM template in the eu-west-1 Region, the creation of the stack fails.

Which of the following could be the reason for this issue?

- A. A single AWS SAM template cannot contain multiple Lambda functions.
- B. Lambda@Edge functions can be created only in the us-east-1 Region.
- C. CloudFront distributions can be created only in the us-east-1 Region.
- D. The CloudFront distribution and the S3 bucket cannot be created in the same Region.

Answer: B

NEW QUESTION # 154

In regard to DynamoDB, what is the Global secondary index?

- A. An index that has the same range key as the table, but a different hash key
- **B. An index with a hash and range key that can be different from those on the table.**
- C. An index that has the same hash key as the table, but a different range key
- D. An index that has the same hash key and range key as the table

Answer: B

Explanation:

Global secondary index - an index with a hash and range key that can be different from those on the table.
