Fortinet FCSS_SASE_AD-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Analytics and Monitoring: This section of the exam measures the skills of Security Analysts and emphasizes the monitoring and reporting aspects of FortiSASE. Candidates are expected to configure dashboards, logging settings, and analyze reports for user traffic and security issues. Additionally, they must use FortiSASE logs to identify potential threats and provide insights into incidents or abnormal behavior. The focus is on leveraging analytics for operational visibility and strengthening the organization's security posture.
Topic 2	• SASE Deployment: This section of the exam measures the knowledge of Implementation Consultants and focuses on the practical aspects of deploying FortiSASE. Candidates will explore user onboarding methods, configuration of administration settings, and the application of security posture checks with compliance rules. The exam also includes key functions such as SIA, SSA, and SPA, alongside the design of security profiles that perform effective content inspection. By combining these tasks, learners demonstrate readiness to roll out secure and scalable deployments.

Topic 3	• SASE Architecture and Components: This section of the exam measures the skills of Network Engineers and introduces the fundamentals of SASE within enterprise environments. Candidates are expected to understand the SASE architecture, identify FortiSASE components, and build deployment cases for real-world scenarios. The content emphasizes how SASE can be integrated into a hybrid network, showcasing secure design principles and the use of FortiSASE capabilities to support business and security objectives.
Topic 4	• Advanced FortiSASE Solutions: This section of the exam measures the expertise of Solution Architects and validates the ability to work with advanced FortiSASE features. It covers deployment of SD-WAN using FortiSASE, implementation of Zero Trust Network Access (ZTNA), and the overall role of FortiSASE in optimizing enterprise connectivity. The section highlights how these advanced solutions improve flexibility, enforce zero-trust principles, and extend security controls across distributed networks and cloud systems.

Fortinet FCSS - FortiSASE 25 Administrator Sample Questions (Q35-Q40):

NEW QUESTION # 35
Your FortiSASE customer has a small branch office in which ten users will be using their personal laptops and mobile devices to access the internet.
Which deployment should they use to secure their internet access with minimal configuration?

- A. Deploy FortiAP to secure internet access.
- B. Deploy FortiClient endpoint agent to secure internet access.
- C. Deploy FortiGate as a LAN extension to secure internet access.
- D. Deploy SD-WAN on-ramp to secure internet access.

Answer: A

Explanation:
Deploying FortiAP enables secure internet access for unmanaged personal devices in small branch offices with minimal configuration by automatically directing traffic through FortiSASE, eliminating the need for endpoint installation or complex setup.

NEW QUESTION # 36
Which statement applies to a single sign-on (SSO) deployment on FortiSASE?

- A. SSO is recommended only for agent-based deployments.
- B. SSO identity providers can be integrated using public and private access types.
- C. SSO users can be imported into FortiSASE and added to user groups.
- D. SSO overrides any other previously configured user authentication.

Answer: D

NEW QUESTION # 37
Which statement best describes the Digital Experience Monitor (DEM) feature on FortiSASE?

- A. It can help IT and security teams ensure consistent security monitoring for remote users.

- B. It can be used to request a detailed analysis of the endpoint from the FortiGuard team.
- C. It requires a separate DEM agent to be downloaded from the FortiSASE portal and installed on the endpoint.
- D. It provides end-to-end network visibility from all the FortiSASE security PoPs to a specific SaaS application.

Answer: D

Explanation:
The Digital Experience Monitor (DEM) feature in FortiSASE is designed to provide end-to-end network visibility by monitoring the performance and health of connections between FortiSASE security Points of Presence (PoPs) and specific SaaS applications. This ensures that administrators can identify and troubleshoot issues related to latency, jitter, packet loss, and other network performance metrics that could impact user experience when accessing cloud-based services.
Here's why the other options are incorrect:
B . It can be used to request a detailed analysis of the endpoint from the FortiGuard team: This is incorrect because DEM focuses on network performance monitoring, not endpoint analysis. Endpoint analysis would typically involve tools like FortiClient or FortiEDR, not DEM.
C . It requires a separate DEM agent to be downloaded from the FortiSASE portal and installed on the endpoint: This is incorrect because DEM operates at the network level and does not require an additional agent to be installed on endpoints.
D . It can help IT and security teams ensure consistent security monitoring for remote users: While DEM indirectly supports security by ensuring optimal network performance, its primary purpose is to monitor and improve the digital experience rather than enforce security policies.

NEW QUESTION # 38
When accessing the FortiSASE portal for the first time, an administrator must select data center locations for which three FortiSASE components? (Choose three.)

- A. Identity & access management (IAM)
- B. Sandbox
- C. Logging
- D. Endpoint management
- E. Points of presence

Answer: C,D,E

NEW QUESTION # 39
Refer to the exhibits.

Antivirus is installed on a Windows 10 endpoint, but the windows application firewall is stopping it from running.
What will the endpoint security posture check be?

- A. FortiClient will tag the endpoint as FortiSASE-Non-Compliant.
- B. FortiClient will trigger network lockdown on the endpoint.
- C. FortiClient will prompt the user to enable antivirus.
- D. FortiClient will be unmanaged from FortiSASE due to failed compliance.

Answer: A

Explanation:
Although the antivirus is installed, it is not running due to the Windows application firewall blocking it.
According to the FortiSASE-Non-Compliant rule, antivirus software must be both installed and running.
Since this condition fails, FortiClient assigns the FortiSASE-Non-Compliant tag to the endpoint.
