Money-Back Guarantee: We Stand Behind Our Salesforce-Data-Cloud Salesforce Data Cloud Accredited Professional Exam Practice Test

The experts in our company are always keeping a close eye on even the slightest change in the field. Therefore, we can assure that you will miss nothing needed for the Salesforce-Data-Cloud exam. What's more, the latest version of our Salesforce-Data-Cloud study materials will be a good way for you to broaden your horizons as well as improve your skills. So with our Salesforce-Data-Cloud Exam Questions, not only you can pass the exam with ease with 100% pass guarantee, but also you can learn the most professional and specilized knowledge in this field!

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q161-Q166):

NEW QUESTION # 161
A Data Cloud Consultant Is in the process of setting up data streams for a new service-based data source.
When ingesting Case data, which field is recommended to be associated with the Event Time field?

- A. Escalation Date
- B. Last Modified Date
- C. Resolution Date
- D. Creation Date

Answer: D

Explanation:

The Event Time field is a special field type that captures the timestamp of an event in a data stream. It is used to track the chronological order of events and to enable time-based segmentation and activation. When ingesting Case data, the recommended field to be associated with the Event Time field is the Last Modified Date field. This field reflects the most recent update to the case and can be used to measure the case duration, resolution time, and customer satisfaction. The other fields, such as Resolution Date, Escalation Date, or Creation Date, are not as suitable for the Event Time field, as they may not capture the latest status of the case or may not be applicable for all cases. References: Data Stream Field Types, Salesforce Data Cloud Exam Questions

NEW QUESTION # 162

An administrator is setting up a data stream with transactional data. What field type should the administrator choose to ensure that leading zeros in the purchase order number are preserved?

- A. Text
- B. Serial
- C. Number
- D. Decimal

Answer: A

Explanation:

The Text field type should be chosen to preserve leading zeros in the purchase order number, as this field type stores alphanumeric characters as strings. The Number and Decimal field types store numeric values as numbers, which would remove any leading zeros. The Serial field type is not a valid field type in Data Cloud.

NEW QUESTION # 163

A retail customer wants to bring customer data from different sources
and wants to take advantage of identity resolution so that it can be
used in segmentation.
On which entity should this be segmented for activation membership?

- A. Subscriber
- B. Unified Contact
- C. Individual
- D. Unified Individual

Answer: D

Explanation:

The correct answer is B, Unified Individual. A Unified Individual is a record that represents a customer across different data sources, created by applying identity resolution rulesets. Identity resolution rulesets are sets of match and reconciliation rules that define how to link and merge data from different sources based on common attributes. Data Cloud uses identity resolution rulesets to resolve data across multiple data sources and helps you create one record for each customer, regardless of where the data came from1. A retail customer who wants to bring customer data from different sources and use identity resolution for segmentation should segment on the Unified Individual entity, which contains the resolved and consolidated customer data. The other options are incorrect because they do not represent the resolved customer data across different sources. A Subscriber is a record that represents a customer who has opted in to receive marketing communications. A Unified Contact is a record that represents a customer who has a relationship with a specific business unit. An Individual is a record that represents a customer's profile data from a single data source. References:

NEW QUESTION # 164

Which type of measures with aggregate functions are supported?

- A. Text
- B. Date
- C. Numeric
- D. Boolean

Answer: C

Explanation:

Numeric is the only type of measures that support aggregate functions. Measures are numeric fields that can be aggregated using functions such as SUM, AVG, MIN, MAX, or COUNT. For example, you can use a measure to calculate the total revenue or the average order value from your data. Date, Text, and Boolean are not types of measures, but types of dimensions. Dimensions are fields that can be used to group or filter data, but not to perform calculations. References: Measures andDimensions

NEW QUESTION # 165
An administrator has configured the Salesforce CRM connector and set up a data stream for the Case object.
A new custom field called "Business Priority" was created on the Case object. However, that field is not available when trying to add it in the data stream. What could be causing this issue?

- A. Utilize the Salesforce Dataloader application to perform a bulk upload from a desktop
- B. The Salesforce Integration User is missing "Read" permissions on the newly created field
- C. The Data Cloud administrator does not need to do anything. After 24 hours when the data stream refreshes, it will automatically include any new fields that were added to CRM
- D. Custom fields on the Case objects are not supported for ingesting into Data Cloud

Answer: B

Explanation:

One possible reason why a new custom field is not available in the data stream is that the Salesforce Integration User, which is used to connect to the CRM source, does not have "Read"permissions on that field2. To fix this issue, the administrator needs to grant the appropriate permissions to the Integration User profile or permission set.

NEW QUESTION # 166
......

With the simulation function, our Salesforce-Data-Cloud training guide is easier to understand and have more vivid explanations to help you learn more knowledge. You can set time to test your study efficiency, so that you can accomplish your test within the given time when you are in the Real Salesforce-Data-Cloud Exam. Besides, you can get the real feeling of taking part in the real exam for our Salesforce-Data-Cloud exam questions have the function of simulating the real exam. So that you can have a better performance when you attend the real exam.
