## Hot CAD Reliable Braindumps Sheet | Valid ServiceNow CAD Updated Demo: Certified Application Developer-ServiceNow

Our CAD learning guide allows you to study anytime, anywhere. If you are concerned that your study time cannot be guaranteed, then our CAD learning guide is your best choice because it allows you to learn from time to time and make full use of all the time available for learning. Our online version of CAD learning guide does not restrict the use of the device. You can use the computer or you can use the mobile phone. You can choose the device you feel convenient at any time.

ServiceNow CAD (Certified Application Developer-ServiceNow) Exam is an industry-recognized certification that validates a developer's skills and abilities in designing, building, and deploying applications on the ServiceNow platform. It is an essential certification for developers who want to demonstrate their expertise in ServiceNow and stand out in the job market. CAD Exam covers a wide range of topics, including ServiceNow architecture, application development, scripting, UI policies, security, and integration with other systems.

## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q270-Q275):

### NEW QUESTION # 270

Which one of the following is NOT a UI Action type?

- A. List choice
- B. List banner button
- C. Form button

- D. Form choice

**Answer: A**

Explanation:

A UI Action is a button, link, or choice that can be clicked by a user to perform an action, such as submitting a form or running a script. The following are UI Action types:

List choice. This is a UI Action that appears as a choice list on a list of records. It can be used to perform an action on multiple records at once, such as deleting or updating them.

Form button. This is a UI Action that appears as a button on a form. It can be used to perform an action on the current record, such as saving or approving it.

List banner button. This is a UI Action that appears as a button on the banner of a list of records. It can be used to perform an action on the entire list, such as exporting or printing it.

The following is not a UI Action type:

Form choice. This is not a UI Action type, but a field type. A form choice is a field that displays a choice list on a form. It can be used to select a value from a predefined set of options, such as priority or state. Reference: UI Actions, Field Types

### NEW QUESTION # 271

Which one of the following is NOT a purpose of application scoping?

- A. Provide a relationship between application artifacts
- B. Provide a namespace (prefix and scope name) to prevent cross application name collisions
- C. Provide controls for how scripts from another scope can alter tables in a scoped application
- D. Provide a way of tracking the user who developed an application

**Answer: A**

Explanation:

The purpose of application scoping is NOT to provide a way of tracking the user who developed an application. Application scoping does not store or display information about the user who created or modified an application or its artifacts. The purpose of application scoping is to provide a relationship between application artifacts, provide a namespace to prevent cross-application name collisions, and provide controls for how scripts from another scope can alter tables in a scoped application. References: [Product Documentation | ServiceNow], [Advantages of Scoped Applications in ServiceNow]

### NEW QUESTION # 272

Which one of the following is true for a Script Include with a Protection Policy value of Protected?

- A. The Protection Policy is applied only if the application is downloaded from the ServiceNow App Store
- B. Any user with the protected\_edit role can see and edit the Script Include
- C. The Protection policy option can only be enabled by a user with the admin role
- D. The Protection Policy is applied only if the glide.app.apply\_protection system property value is true

**Answer: A**

Explanation:

[https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c\\_ScriptProtectionPolicy.html](https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c_ScriptProtectionPolicy.html)

The following is true for a Script Include with a Protection Policy value of Protected:

The Protection Policy is applied only if the application is downloaded from the ServiceNow App Store. This is true because the Protection Policy is a feature that allows developers to protect their Script Includes from being viewed or modified by other users when they distribute their applications through the ServiceNow App Store. The Protection Policy is only enforced when the application is installed from the App Store, not when it is developed or tested on the instance.

The following are not true for a Script Include with a Protection Policy value of Protected:

Any user with the protected\_edit role can see and edit the Script Include. This is false because the protected\_edit role is not related to the Protection Policy, but to the Access Control (ACL) rules. The protected\_edit role allows users to edit protected fields on a table, such as the script field on the sys\_script table, which stores the Business Rules. The Protection Policy does not use roles to control access to the Script Includes, but a cryptographic key that is generated when the application is published to the App Store. The Protection policy option can only be enabled by a user with the admin role. This is false because the Protection policy option can be enabled by any user who has the application\_admin role for the scoped application that contains the Script Include. The application\_admin role grants full access to the application development and administration within the scope of the application.

The Protection Policy is applied only if the `glide.app.apply_protection` system property value is true. This is false because the `glide.app.apply_protection` system property is not related to the Protection Policy, but to the Application Restricted Caller Access (ARCA) feature. The ARCA feature allows developers to restrict the access to the Script Includes from other applications based on the caller's scope. The `glide.app.apply_protection` system property determines whether the ARCA feature is enabled or disabled on the instance. References: Script Includes, Protect Script Includes, Application Restricted Caller Access

#### NEW QUESTION # 273

When crafting a scoped application that contains flow actions, what is the application called?

- A. Spoke
- B. Action
- C. Flow
- D. Bundle

**Answer: A**

Explanation:

\* Definition of a Spoke: A "spoke" is a scoped application or component of an application that contains Flow Designer actions and integrations. Spokes provide reusable functionality and are typically used to extend the capabilities of Flow Designer.

\* Why It's Called a Spoke:

\* Spokes are part of the ServiceNow Flow Designer framework.

\* They contain predefined actions that are reusable across multiple flows. For example, an "Email Spoke" might include actions for sending emails or managing email configurations.

\* Why Other Options Are Incorrect:

\* Option B (Flow): This refers to an individual flow, not the application containing reusable actions.

\* Option C (Bundle): There is no such term as "Bundle" specific to Flow Designer in ServiceNow.

\* Option D (Action): While flows contain actions, the scoped application that houses these actions is referred to as a spoke. ServiceNow Developer Documentation on Flow Designer Spokes.

#### NEW QUESTION # 274

What is a Module?

- A. A way of helping users quickly access information and services by filtering the items in the Application Navigator
- B. A web-based way of providing software to end-users
- C. A group of menus, or pages, providing related information and functionality to end-users
- D. The functionality within an application menu such as opening a page in the content frame or a separate tab or window

**Answer: A**

Explanation:

Explanation/Reference: [https://docs.servicenow.com/bundle/orlando-platform-user-interface/page/administer/navigation-and-ui/task/t\\_CreateAModule.html](https://docs.servicenow.com/bundle/orlando-platform-user-interface/page/administer/navigation-and-ui/task/t_CreateAModule.html)
