

New CWAP-405 Exam Review, Pdf CWAP-405 Free

BONUS!!! Download part of Pass4Leader CWAP-405 dumps for free: <https://drive.google.com/open?id=1OWHFjpkMbMf8arbrgz7p7WhfDpL9zZbv>

The CWAP-405 Learning Materials of us are pass guaranteed and money back guaranteed. Since the CWAP-405 exam dumps are of high accuracy and high quality, and it can ensure you pass the exam successfully. We also give you any help you want, if you need any help or you have any questions, just contact us without any hesitation, we will do all we can to help you pass the exam. Just have a try, and you will benefit a lot.

Pass4Leader offers a free trial for all the products and give you an open chance to test its various features. If you are satisfied with the demo so, you can buy CWAP-405 exam questions PDF or Practice software. We updated our product frequently, our determined team is always ready to make certain alterations as and when CWAP-405 announce any changing.

Pdf CWAP-405 Free, Detailed CWAP-405 Study Dumps

As we all know, the world does not have two identical leaves. People's tastes also vary a lot. So we have tried our best to develop the three packages of our CWAP-405 exam braindumps for you to choose. Now we have free demo of the CWAP-405 study materials exactly according to the three packages on the website for you to download before you pay for the CWAP-405 Practice Engine, and the free demos are a small part of the questions and answers. You can check the quality and validity by them.

CWNP Certified Wireless Analysis Professional Sample Questions (Q118-Q123):

NEW QUESTION # 118

Which one of the following portions of information is communicated by bits in the PHY Header?

- A. Signal strength

- B. Noise
- C. SNR
- **D. Data rate**

Answer: D

Explanation:

One of the information that is communicated by bits in the PHY header is data rate. Data rate is the speed at which data is transmitted or received over the wireless medium. Data rate depends on factors such as modulation, coding, channel width, spatial streams, and guard interval. Data rate is indicated by bits in different fields of the PHY header, depending on the type of PPDU (e.g., OFDM, HT, VHT, HE). The receiver uses these bits to determine how to decode and demodulate the rest of the PPDU. The other options are not correct, as they are not communicated by bits in the PHY header. SNR (Signal-to-Noise Ratio), noise, and signal strength are measured by the receiver based on its own capabilities and environment. References: [Wireless Analysis Professional Study Guide CWAP-405], Chapter 4: 802.11 Physical Layer, page 101-105

NEW QUESTION # 119

You have implemented an AP at a remote office. It is a single-band AP supporting 802.11ac. Several users complain that their laptops cannot connect to the WLAN. These laptops are from multiple vendors and range in age from 2 to 4 years. The SSID and security profile settings are correct. All default settings were used on the AP with the exception of the SSID and security settings. What is the most likely issue preventing these STAs from connecting to the AP?

- A. They do not support VHT and only support OFDM
- B. They do not support the basic data rates
- **C. They are 5 GHz-only devices**
- D. They are 2.4 GHz-only devices

Answer: C

NEW QUESTION # 120

Recently, three rogue APs have been connected to the network and later discovered. You want to prevent future rogue AP installations as much as possible.

What is the first step to eliminating or reducing rogue APs on the network?

- A. Create a hash of the MAC addresses of all authorized devices and continually scan for non-matching hashes
- **B. Enable rogue detection in the existing authorized APs**
- C. Use IPSec between every AP and the network infrastructure
- D. Define a direct policy that stipulates the ramifications of installing unauthorized devices

Answer: B

NEW QUESTION # 121

Prior to a retransmission what happens to the CW_{max} value?

- A. Increases by 1
- B. Reset to 0
- **C. Doubles and increases by 1**
- D. Set to the value of the AIFSN

Answer: C

Explanation:

Before a retransmission, the CW_{max} (Contention Window maximum) value doubles and increases by 1. The CW_{max} is a parameter that determines the upper limit of the random backoff time that a STA (station) has to wait before attempting to access the medium. The random backoff time is chosen from a range of values between CW_{min} (Contention Window minimum) and CW_{max}. The CW_{min} and CW_{max} values depend on the AC (Access Category) of the traffic and the PHY type of the STA. If a transmission fails due to a collision or an error, the STA has to retransmit the frame after waiting for another random backoff time. However, to reduce the probability of another collision, the STA increases its CW_{max} value by doubling it and adding 1. This increases the range of possible backoff values and spreads out the STAs more evenly. The STA resets its CW_{max} value to its

original value after a successful transmission or after reaching a predefined limit. References: [Wireless Analysis Professional Study Guide CWAP-405], Chapter 7: QoS Analysis, page 196-197

NEW QUESTION # 122

You are attempting to determine timing information within a packet capture of a WLAN protocol analyzer. What time is used to display the time the packet was captured based on the system clock in the computer?

- A. Delta
- **B. Arrival**
- C. Relative
- D. Interframe

Answer: B

NEW QUESTION # 123

.....

If you get our CWAP-405 training guide, you will surely find a better self. As we all know, the best way to gain confidence is to do something successfully. With our CWAP-405 study materials, you will easily pass the CWAP-405 examination and gain more confidence. As there are three versions of our CWAP-405 preparation questions: the PDF, Software and APP online, so you will find you can have a wonderful study experience with your favorite version.
