Get SAP C-CPI-2506 Practice Test To Gain Brilliant Result [2026]

Do you want to obtain your certification as soon as possible? If you do, you can try C-CPI-2506 exam materials of us, we will help you obtain the certification with the least time. C-CPI-2506 training materials are edited by skilled experts, therefore the quality can be guaranteed. In order to build up your confidence for C-CPI-2506 exam dumps, we are pass guarantee and money back guarantee, and if you fail to pass the exam, we will give you full refund. In addition, free update for 365 days is available, so that you can know the latest version and exchange your practicing method according to new changes. The update version for C-CPI-2506 Exam Materials will be sent to your email automatically.

SAP Certified Associate - Integration Developer Sample Questions (Q54-Q59):

NEW QUESTION # 54

You configured a content modifier as follows: Action Create. Name: ProductID. Source Type: XPath. Source Value: //ProductID. Data Type: java lang string. After testing the content modifier, you receive an error message that contains the following fragment: java.lang.ClassNotFoundException java lang string. What caused the error message?

- A. Incorrect data type
- B. Incorrect source type
- C. Incorrect name
- D. Incorrect source value

Answer: A

Explanation:

The error message is caused by an incorrect data type in the content modifier configuration. The data type should be `java.lang.String` instead of `java lang string`. The data type defines the type of the value that will be stored in the header or property of the message. It should match one of the supported Java classes, such as `java.lang.String`, `java.lang.Integer`, `java.lang.Boolean`, and so on. If the data type is not valid, a `java.lang.ClassNotFoundException` will be thrown. Reference: Content Modifier | SAP Help Portal, Getting clear with SAP Integration Suite Content Modifier | SAP Blogs

NEW QUESTION # 55

What does the messaging model of the Apache Camel Data Model consist of?

- A. Header, properties, attachment
- B. Header, Exchange ID, in-message
- C. Header, body, properties
- **D. Header, body, attachment**

Answer: D

Explanation:

The messaging model of the Apache Camel Data Model consists of three parts: header, body, and attachment. The header contains information related to the message, such as addressing, routing, or metadata. The body contains the payload or the content of the message. The attachment contains optional data that can be attached to the message, such as files or images. The Apache Camel Data Model is used by SAP Integration Suite to process messages of any format using various components and data formats. Reference: The Camel Data Model in a Nutshell | SAP Help Portal, Data Formats :: Apache Camel

NEW QUESTION # 56

What can you use to prevent overload in an OData request and reply call?

- A. Stop parameter
- B. Query filter
- **C. Paging**
- D. HTTP adapter

Answer: C

Explanation:

To prevent overload in an OData request and reply call, you can use paging. Paging is a technique that allows you to retrieve a large number of data sets in smaller chunks or pages. You can use the OData query options `$top` and `$skip` to specify how many records you want to fetch and how many records you want to skip in each request. This reduces the network load and improves the performance of the OData service. Reference: OData API | SAP Help Portal, SAP Integration Suite: enrich a payload with OData Service | SAP Blogs

NEW QUESTION # 57

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. SFTP
- B. Mail
- C. AMQP
- **D. OData**

Answer: D

Explanation:

For a synchronous call to a remote HTTP API in an integration flow:

The OData adapter (or HTTP adapter) is used to perform synchronous request-reply communication with REST-based services.

AMQP # Messaging protocol, not synchronous.

SFTP # File-based transfer, asynchronous.

Mail # For SMTP/IMAP, not synchronous API calls.

Thus, the correct adapter for a synchronous remote API call is OData (or HTTP adapter, depending on configuration).

NEW QUESTION # 58

Which SAP Cloud Integration process event allows you to run integration flows directly after deployment?

- A. Timer
- B. Router
- C. Message Digest
- D. Content Modifier

Answer: A

Explanation:

A Timer event allows you to run integration flows directly after deployment. A Timer event is triggered by a predefined schedule or interval, such as every hour, every day, or every month. You can use a Timer event to initiate an integration process based on a time-based condition. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 59

.....

The cost for the registration of the certification is considerably expensive, it varies from 100\$ to 1000\$.
