

DevOps-Foundation Trusted Exam Resource, Valid DevOps-Foundation Test Answers

P.S. Free 2025 Peoplecert DevOps-Foundation dumps are available on Google Drive shared by Prep4King: <https://drive.google.com/open?id=1bXGkqp0YxYNFzZuQKnXiqys-YXeOi-YQ>

Our DevOps-Foundation guide torrent has gone through strict analysis and summary according to the past exam papers and the popular trend in the industry and are revised and updated. The DevOps-Foundation exam questions have simplified the sophisticated notions. The software boosts varied self-learning and self-assessment functions to check the learning results. The software of our DevOps-Foundation Test Torrent provides the statistics report function and help the students find the weak links and deal with them. With this version of our DevOps-Foundation exam questions, you will be able to pass the exam easily.

Peoplecert DevOps-Foundation Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Culture, Behaviours, Operating Models: This section of the exam measures the skills of DevOps engineers and covers how to assess and evolve organisational culture in relation to DevOps transformation. It includes concepts such as Cultural Debt, Behavioural Models, and Organisational Maturity, helping professionals understand team dynamics and readiness for change.
Topic 2	<ul style="list-style-type: none"> • Exploring DevOps: This section of the exam measures the skills of DevOps engineers and covers the foundations of DevOps, including its emergence as a critical discipline in the digital era. It introduces learners to the basic purpose, evolution, and significance of DevOps in modern software and infrastructure environments.
Topic 3	<ul style="list-style-type: none"> • Automation, Architecting DevOps Toolchains: This section of the exam measures the skills of IT operations specialists and covers key automation principles within the DevOps toolchain. It focuses on CI • CD pipelines, Infrastructure as Code, containerisation, cloud-native architecture, platform engineering, and emerging technologies like Machine Learning and Generative AI in DevOps contexts.
Topic 4	<ul style="list-style-type: none"> • Measurement, Metrics, and Reporting: This section of the exam measures the skills of DevOps engineers and covers metrics that help monitor and evaluate the performance of DevOps practices. Topics include speed, quality, culture, change lead time, cycle time, and the use of dashboards, value-driven metrics, and AIOps in reporting and decision-making.
Topic 5	<ul style="list-style-type: none"> • Business and Technology Frameworks: This section of the exam measures the skills of IT operations specialists and covers various supporting frameworks that intersect with DevOps. These include Agile and Lean, IT Service Management, Value Stream Management, Site Reliability Engineering, Safety Culture, Learning Organisations, and Continuous Funding models that enable long-term adaptability.

Valid DevOps-Foundation Test Answers | DevOps-Foundation Exam Simulator Online

In this age of anxiety, everyone seems to have great pressure. If you are better, you will have a more relaxed life. DevOps-Foundation guide materials allow you to increase the efficiency of your work. You can spend more time doing other things. Our study materials allow you to pass the DevOps-Foundation exam in the shortest possible time. You will stand at a higher starting point than others. Why are DevOps-Foundation Practice Questions worth your choice? I hope you can spend a little time free downloading our demo of our DevOps-Foundation exam questions, then you will know the advantages of our DevOps-Foundation study materials!

Peoplecert PeopleCert DevOps Foundationv3.6Exam Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which of the following is NOT a characteristic of DevOps?

- A. World-class stability, reliability, availability and security
- **B. Fast flow of unplanned work into production**
- C. Ensuring overall organizational success
- D. Working towards a common goal

Answer: B

Explanation:

A fast flow of unplanned work into production is not a characteristic of DevOps. In fact, DevOps practices strive to minimize unplanned work (like emergency changes or outages) through automation, testing, collaboration, and rigorous change control. The other options—ensuring organizational success, working toward a common goal, and world-class stability/reliability—are all key DevOps characteristics.

Reference: DevOps Foundation v3.6 syllabus section 1.4; State of DevOps Report.

NEW QUESTION # 60

What is the BEST description of the Theory of Constraints?

- A. A methodology for encouraging experimentation and learning so that organizations can identify constraints and practice for failure
- B. A methodology for shortening feedback loops so that IT is able to understand and respond faster to customer needs
- **C. A methodology for identifying the most important limiting factor that stands in the way of achieving a goal**
- D. A methodology for designing and implementing the processes that underpin deployment pipelines

Answer: C

Explanation:

Theory of Constraints is a methodology that seeks to identify the single, most important limiting factor (constraint) in a process and systematically improve it until it's no longer the limiting factor.

Extract-style reference:

"The Theory of Constraints provides a powerful framework for identifying bottlenecks (constraints) that limit system performance and focusing improvement efforts on these areas to maximize throughput."

-Goldratt's Theory of Constraints

DevOps Foundation syllabus discusses this as a foundational Lean concept, directly applicable to software delivery pipelines, where delays or resource shortages can restrict overall throughput.

NEW QUESTION # 61

What does the Theory of Constraints recognise?

- **A. All of the Above**
- B. Every process has at least one constraint that affects its ability to meet its goal
- C. A process will only meet the capacity of its constraints
- D. Improving constraints is the fastest way to improve the entire system

Answer: A

Explanation:

The Theory of Constraints (ToC), as referenced in PeopleCert DevOps Foundation, states:

- * A: Every system has at least one limiting factor (constraint) that determines overall performance.
- * B: System throughput is limited by the capacity of the constraint; improving non-constraints has minimal impact.
- * C: Focusing improvement efforts on the constraint is the most effective way to improve the performance of the entire system.

In DevOps, constraints may appear in testing, change approvals, environment provisioning, or deployment.

By identifying and alleviating these bottlenecks, organizations improve flow and reduce lead time.

Since all three statements (A, B, C) are accurate representations of ToC, the correct answer is D - All of the Above.

NEW QUESTION # 62

Which of the following does NOT make DevOps important now?

- **A. IT must continue to operate in a silo culture**
- B. Time to value must accelerate
- C. Consumers have "app" mentalities and expectations
- D. Enterprises have young, nimble start-up competitors

Answer: A

Explanation:

The urgency for DevOps adoption is driven by increasing market competition, evolving customer expectations, and the need for rapid delivery of value.

* B: Nimble start-ups often deliver faster and more innovatively, putting pressure on established enterprises.

* C: Customers expect continuous improvement and seamless digital experiences ("app mentality").

* D: Reducing time-to-value is essential for staying competitive and meeting business demands.

However, A describes a siloed culture-something DevOps actively works to eliminate, not a reason for its importance. In fact, remaining siloed is an obstacle to achieving DevOps benefits, not a driver for adoption.

Therefore, A is the correct "NOT" choice.

NEW QUESTION # 63

Which statement about DevOps toolchains is CORRECT? They:

- A. Should be standardized across applications
- **B. Automate tasks in a deployment pipeline**
- C. Require open source tools
- D. Automate continuous testing activities

Answer: B

Explanation:

A DevOps toolchain is designed to automate repetitive tasks across the software delivery process. This includes compiling code, running tests, building artifacts, deploying to environments, and monitoring systems.

While a toolchain can automate continuous testing (D), that is only one of many tasks automated.

Standardization (B) is beneficial but not always required-some applications may need specialized tools.

Open source tools (C) are not mandatory; many organizations use a mix of open source and proprietary tools.

Therefore, A-automation of tasks in a deployment pipeline-is the most universally correct statement.

NEW QUESTION # 64

.....

Preparation should be convenient and authentic so that anyone, be it a working person or a student, can handle the load. But now I have to tell you that all of these can be achieved in our DevOps-Foundation exam preparation materials. The exam preparation materials of Prep4King DevOps-Foundation are authentic and the way of the study is designed highly convenient. I don't think any other site can produce results that Prep4King can get. That is why I would recommend it to all the candidates attempting the DevOps-Foundation Exam to use DevOps-Foundation exam preparation materials.
