## Reliable Mule-Dev-201 Exam Vce & Mule-Dev-201 Test Labs

In order to provide the most effective Mule-Dev-201 exam materials which cover all of the current events for our customers, a group of experts in our company always keep an close eye on the changes of the Mule-Dev-201 exam, and then will compile all of the new key points as well as the latest types of exam questions into the new version of our Mule-Dev-201 training engine. Do not lose the wonderful chance to advance with times. Just come and have a try on our Mule-Dev-201 study questions!

## Salesforce Certified MuleSoft Developer Sample Questions (Q130-Q135):

### NEW QUESTION # 130

Mule application contains ActiveMQ JMS dependency. Mule application was compiled and run successfully in Anypoint Studio. The mule application must now be exported from Anypoint Studio and shared with other developer. What export options should be selected to create the smallest JAR file that can be imported into other developer's Anypoint Studio and run successfully?

- A. Select both Attach Project Sources and Include project modules and dependencies option

- B. Select only Attach Project Sources only
- C. De-select both Attach Project Sources and Include project modules and dependencies option
- D. Select the Include project modules and dependencies option only

**Answer: B**

Explanation:

Correct answer is Select only Attach Project Sources only

You must keep the Attach Project Sources option selected to be able to import the packaged JAR file back into a Studio workspace.

Deselect the Include project modules and dependencies option.

This option skips bundling the actual modules and external dependencies required to run the Mule application in a Mule runtime engine, creating a lightweight JAR file package that does not include any dependencies specified in the Mule application's pom.xml file.

The generated JAR file is not a functional deployable archive and cannot be deployed to a Mule runtime engine, but instead offers a way to archive only the source files that make up the Mule application. This is the same as using the `-lightWeightPackage` flag when packaging using the Mule Maven Plugin and is useful if you want to distribute your project to other Studio installations because it only keeps a reference to all its dependencies. When you import a lightweight package into Studio, all your dependencies are automatically downloaded MuleSoft Doc Ref : <https://docs.mulesoft.com/studio/7.8/import-export-packages>

### NEW QUESTION # 131

A Mule application contains an ActiveMQ JMS dependency. The Mule application was developed in Anypoint Studio and runs successfully in Anypoint Studio.

The Mule application must now be exported from Anypoint Studio and shared with another developer.

What export options create the smallest JAR file that can be imported into the other developer's Anypoint Studio and run successfully?

- A. Option B
- B. Option A
- C. Option C
- D. Option D

**Answer: D**

### NEW QUESTION # 132

Refer to the exhibits.

The Set Variable transformer is set with value `#[ [ first "Max" last "Mule" ] ]`.

What is a valid DataWeave expression to set as the message attribute of the Logger to access the value "Max" from the Mule event?

- A. `vars "customer first"`
- B. `"customer first"`
- C. `customer first`
- D. `vars "customer" "first"`

**Answer: D**

### NEW QUESTION # 133

A Database On Table Row listener retrieves data from a CUSTOMER table that contains a primary key `userid` column and an increasing `kxjin_date_time` column. Neither column allows duplicate values.

How should the listener be configured so it retrieves each row at most one time?

- A. Set the watermark column to the `bgin_date_time` column
- B. Set the target value to the last retrieved `user_id` value
- C. Set the target value to the last retrieved `login_date_time` value
- D. Set the watermark column to the `user_Id` column

**Answer: A**

Explanation:

- \* Watermark allows the poll scope to poll for new resources instead of getting the same resource over and over again.
  - \* The database table must be ordered so that the "watermark functionality" can move effectively in the ordered list. Watermark stores the current/last picked up "record id."
  - \* If the Mule application is shut down, it will store the last picked up "record id" in the Java Object Store and the data will continue to exist in the file. This watermark functionality is valuable and enables developers to have increased transparency.
  - \* Developers do not need to create code to handle caching; it is all configurable!
  - \* There are two columns and both are unique but user\_id can't guaranty sequence whereas date\_time will always be in increasing order and table content can easily be ordered on the basis of last processed date\_time.
- So correct answer is: Set the watermark column to the date\_time column

#### NEW QUESTION # 134

A REST connect module is generated for a RAML specification. and then the rest connect module is imported in mule application in Anypoint Studio. For each method of the RAML specification , what does the REST connect module provide?

- A. A scope
- B. An operation
- C. An event source
- **D. A flow**

**Answer: D**

Explanation:

Correct answer is an operation. For each method of the RAML specification , REST connect module provide an operation. Please refer to the below screenshot.

#### NEW QUESTION # 135

.....

The Salesforce Certified MuleSoft Developer (Mule-Dev-201) practice test questions prep material has actual Salesforce Certified MuleSoft Developer exam questions for our customers so they don't face any hurdles while preparing for Salesforce Mule-Dev-201 certification exam. The study material is made by professionals while thinking about our users. We have made the product user-friendly so it will be an easy-to-use learning material. We even guarantee our users that if they couldn't pass the Salesforce Mule-Dev-201 Certification Exam on the first try with their efforts, they can claim a full refund of their payment from us (terms and conditions apply).
