High Pass Rate NSE7_EFW-7.2 Study Tool Helps You Pass the Fortinet NSE 7 - Enterprise Firewall 7.2 Exam

Success in acquiring the NSE7_EFW-7.2 is seen to be crucial for your career growth. But preparing for the Fortinet NSE 7 - Enterprise Firewall 7.2 (NSE7_EFW-7.2) exam in today's busy routine might be difficult. This is where actual Fortinet NSE7_EFW-7.2 Exam Questions offered by PassSureExam come into play. For those candidates, who want to clear the NSE7_EFW-7.2 certification exam in a short time, we offer updated and real exam questions.

Fortinet NSE 7 - Enterprise Firewall 7.2 Sample Questions (Q17-Q22):

NEW QUESTION # 17
Refer to the exhibit, which contains a partial BGP combination.

You want to configure a loopback as the OGP source.
Which two parameters must you set in the BGP configuration? (Choose two)

- A. ibgp-enfoce-multihop
- B. ebgp-enforce-multihop
- C. update-source
- D. recursive-next-hop

Answer: B,C

Explanation:
To configure a loopback as the BGP source, you need to set the "ebgp-enforce-multihop" and "update-source" parameters in the BGP configuration. The "ebgp-enforce-multihop" allows EBGP connections to neighbor routers that are not directly connected, while "update-source" specifies the IP address that should be used for the BGP session1. References ≔ BGP on loopback, Loopback interface, Technical Tip: Configuring EBGP Multihop Load-Balancing, Technical Tip: BGP routes are not installed in routing table with loopback as update source

NEW QUESTION # 18
Which ADVPN configuration must be configured using a script on fortiManager, when using VPN Manager to manage fortiGate VPN tunnels?

- A. Configure IP addresses on IPsec virtual interlaces
- B. Disable add-route on hub
- C. Enable AD-VPN in IPsec phase 1
- D. Set protected network to all

Answer: C

Explanation:
To enable AD-VPN, you need to edit an SD-WAN overlay template and enable the Auto- Discovery VPN toggle. This will automatically add the required settings to the IPsec template and the BGP template. You cannot enable AD-VPN directly in the IPsec phase 1 settings using VPN Manager.

NEW QUESTION # 19
Refer to the exhibit which shows config system central-management information.

```
config system central-management
    set type fortimanager
    set allow-push-firmware disable
    set allow-remote-firmware-upgrade disable
    set fmg "10.1.0.241"
    config server-list
        edit 1
            set server-type update
            set server-address 10.1.0.241
        next
    end
    set include-default-servers disable
end
```

Which setting must you configure for the web filtering feature to function?

- A. Configure securewf.fortiguard.net on the default servers
- B. Configure server-type with the rating option
- C. Add server.fortiguard.net to the Server list
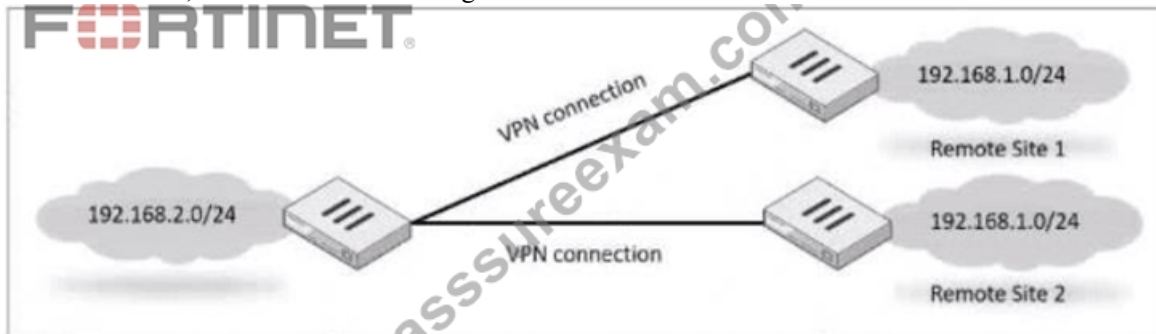

- D. Set update-server-location to automatic

Answer: B

Explanation:
For the web filtering feature to function effectively, the FortiGate device needs to have a server configured for rating services. The rating option in the server-type setting specifies that the server is used for URL rating lookup, which is essential for web filtering. The displayed configuration does not list any FortiGuard web filtering servers, which would be necessary for web filtering. The setting set include-default-servers disable indicates that the default FortiGuard servers are not being used, and hence, a specific server for web filtering (like securewf.fortiguard.net) needs to be configured.

NEW QUESTION # 20
Refer to the exhibit, which shows a network diagram.

Which IPsec phase 2 configuration should you impalement so that only one remote site is connected at any time?

- A. Set route-overlap to allow.
- B. Set net-device to enable
- C. Set single-source to enable
- D. Set route-overlap to either use-new or use-old

Answer: D

Explanation:
To ensure that only one remote site is connected at any given time in an IPsec VPN scenario, you should use route-overlap with the option to either use-new or use-old. This setting dictates which routes are preferred and how overlaps in routes are handled, allowing for one connection to take precedence over the other (C).

NEW QUESTION # 21
Which statement is true regarding the Bidirectional Forwarding Detection protocol in BGP?

- A. BFD is enabled under config router bfd configuration
- B. BFD is used to detect one way device failure
- C. BFD is only supported when two FortiGate devices are directly connected on the same network
- D. BFD is using BGP keepalive messages to check the status of BGP peer

Answer: B

NEW QUESTION # 22
......

The experts in our company are always keeping a close eye on even the slightest change in the field. Therefore, we can assure that you will miss nothing needed for the NSE7_EFW-7.2 exam. What's more, the latest version of our NSE7_EFW-7.2 study materials will be a good way for you to broaden your horizons as well as improve your skills. So with our NSE7_EFW-7.2 Exam Questions, not only you can pass the exam with ease with 100% pass guarantee, but also you can learn the most professional and specilized knowledge in this field!
