Latest ISO-IEC-27001-Lead-Auditor Valid Test Syllabus, Ensure to pass the ISO-IEC-27001-Lead-Auditor Exam

What's more, part of that Pass4suresVCE ISO-IEC-27001-Lead-Auditor dumps now are free: https://drive.google.com/open?id=1ngDMQrtkI7pQh5WSVLs5e7K4lD9cvfvE

Revision of your ISO-IEC-27001-Lead-Auditor exam learning is as essential as the preparation. For that purpose, ISO-IEC-27001-Lead-Auditor exam dumps contains specially created real exam like practice questions and answers. They are in fact meant to provide you the opportunity to revise your learning and overcome your ISO-IEC-27001-Lead-Auditor Exam fear by repeating the practice tests as many times as you can. Preparation for ISO-IEC-27001-Lead-Auditor exam using our ISO-IEC-27001-Lead-Auditor exam materials are sure to help you obtain your targeted percentage too.

PECB ISO-IEC-27001-Lead-Auditor Exam is ideal for individuals who work in the information security field, such as information security managers, IT managers, consultants, and auditors. PECB Certified ISO/IEC 27001 Lead Auditor exam certification provides a comprehensive understanding of the ISO/IEC 27001 standard and the auditing process, making it an essential credential for those who want to ensure that their organization's information assets are protected. PECB Certified ISO/IEC 27001 Lead Auditor exam certification also demonstrates to clients and stakeholders that the organization is committed to maintaining the highest standards of information security management.

PECB ISO-IEC-27001-Lead-Auditor certification exam covers a wide range of topics related to information security management, including risk management, asset management, access control, and incident management. ISO-IEC-27001-Lead-Auditor Exam consists of multiple-choice questions and is designed to test the individual's knowledge and understanding of the ISO/IEC 27001 standard.

PECB ISO-IEC-27001-Lead-Auditor exam is ideal for individuals who are looking to advance their careers in the field of information security management. ISO-IEC-27001-Lead-Auditor exam covers a range of topics, including information security management systems, risk management, and the auditing process. Successful completion of the exam demonstrates that an individual has the skills and knowledge necessary to lead an audit team and evaluate an organization's information security management system.

How To Improve Your Professional Skills By Achieving The PECB ISO-IEC-27001-Lead-Auditor Certification?

We do gain our high appraisal by our ISO-IEC-27001-Lead-Auditor quiz torrent and there is no question that our ISO-IEC-27001-Lead-Auditor test prep will be your perfect choice. It is our explicit aim to help you pass it. Our latest ISO-IEC-27001-Lead-Auditor exam torrent are perfect paragon in this industry full of elucidating content for exam candidates of various degree to use. Our results of latest ISO-IEC-27001-Lead-Auditor Exam Torrent are startlingly amazing, which is more than 98 percent of exam candidates achieved their goal successfully.

PECB Certified ISO/IEC 27001 Lead Auditor exam Sample Questions (Q292-Q297):

NEW QUESTION # 292

Information or data that are classified as _____ do not require labeling.

- A. Highly Confidential
- B. Internal
- C. Public
- D. Confidential

Answer: C

Explanation:

Information or data that are classified as public do not require labeling. Public information or data are those that are intended for general disclosure and have no impact on the organization's operations or reputation if disclosed. Labeling is a method of implementing classification, which is a process of structuring information according to its sensitivity and value for the organization. Labeling helps to identify the level of protection and handling required for each type of information. Information or data that are classified as internal, confidential, or highly confidential require labeling, as they contain information that is not suitable for public disclosure and may cause harm or loss to the organization if disclosed. NEW QUESTION # 293

You are an experienced audit team leader conducting a third-party surveillance audit of an organisation that designs websites for its clients. You are currently reviewing the organisation's Statement of Applicability.

Based on the requirements of ISO/IEC 27001, which two of the following observations about the Statement of Applicability are true?

- A. Justification for both the inclusion and exclusion of Annex A controls in the Statement of Applicability is required
- B. The Statement of Applicability must be reviewed at Management Review
- C. The Statement of Applicability is owned and amended by the organisation's top management
- D. The Statement of Applicability must be reviewed at least annually
- E. Justification is only required for any controls that the organisations choses to exclude
- F. A Statement of Applicability must be produced by organisations seeking ISO/IEC 27001 conformity

Answer: A,F

NEW QUESTION # 294

Scenario 6: Cyber ACrypt is a cybersecurity company that provides endpoint protection by offering anti-malware and device security, asset life cycle management, and device encryption. To validate its ISMS against ISO/IEC 27001 and demonstrate its commitment to cybersecurity excellence, the company underwent a meticulous audit process led by John, the appointed audit team leader.

Upon accepting the audit mandate, John promptly organized a meeting to outline the audit plan and team roles This phase was crucial for aligning the team with the audit's objectives and scope However, the initial presentation to Cyber ACrypt's staff revealed a significant gap in understanding the audit's scope and objectives, indicating potential readiness challenges within the company As the stage 1 audit commenced, the team prepared for on-site activities. They reviewed Cyber ACrypt's documented information, including the information security policy and operational procedures ensuring each piece conformed to and was standardized in format with author identification, production date, version number, and approval date Additionally, the audit team ensured that each document contained the information required by the respective clause of the standard This phase revealed that a detailed audit of the documentation describing task execution was unnecessary, streamlining the process and focusing the team's efforts on critical areas During the phase of conducting on-site activities, the team evaluated management responsibility for the Cyber Acrypt's policies This thorough examination aimed to ascertain continual improvement and adherence to ISMS requirements Subsequently, in the document, the stage 1 audit outputs phase, the audit team meticulously documented their findings, underscoring their conclusions regarding the fulfillment of the stage 1 objectives. This documentation was vital for the audit team and Cyber ACrypt to understand the preliminary audit outcomes and areas requiring attention.

The audit team also decided to conduct interviews with key interested parties. This decision was motivated by the objective of collecting robust audit evidence to validate the management system's compliance with ISO/IEC 27001 requirements. Engaging with

interested parties across various levels of Cyber ACrypt provided the audit team with invaluable perspectives and an understanding of the ISMS's implementation and effectiveness.

The stage 1 audit report unveiled critical areas of concern. The Statement of Applicability (SoA) and the ISMS policy were found to be lacking in several respects, including insufficient risk assessment, inadequate access controls, and lack of regular policy reviews. This prompted Cyber ACrypt to take immediate action to address these shortcomings. Their prompt response and modifications to the strategic documents reflected a strong commitment to achieving compliance.

The technical expertise introduced to bridge the audit team's cybersecurity knowledge gap played a pivotal role in identifying shortcomings in the risk assessment methodology and reviewing network architecture. This included evaluating firewalls, intrusion detection and prevention systems, and other network security measures, as well as assessing how Cyber ACrypt detects, responds to, and recovers from external and internal threats. Under John's supervision, the technical expert communicated the audit findings to the representatives of Cyber ACrypt. However, the audit team observed that the expert s objectivity might have been compromised due to receiving consultancy fees from the auditee. Considering the behavior of the technical expert during the audit, the audit team leader decided to discuss this concern with the certification body.

Based on the scenario above, answer the following question:

Which activity was NOT conducted correctly by the audit team during the Stage 1 audit?

- A. Conducting on-site activities by evaluating management responsibility for Cyber ACrypt's policies
- B. Documenting the Stage 1 audit outputs by failing to include the relevant evidence or supporting documentation
- C. Preparing for on-site activities by including the information security policy and operational procedures for review

Answer: B

Explanation:
Comprehensive and Detailed In-Depth
C . Correct Answer:
The audit team documented findings, but the scenario does not confirm whether sufficient supporting evidence was included.
ISO 19011:2018 requires audit findings to be properly documented and justified with evidence.
Failing to document evidence reduces audit credibility.
A . Incorrect:
Preparing for the audit by reviewing policies and procedures is correct practice.
B . Incorrect:
Evaluating management responsibility for ISMS compliance is a required step in Stage 1.
Relevant Standard Reference:
ISO/IEC 27001:2022 Clause 9.2 (Internal Audit)

NEW QUESTION # 295
You are performing an ISMS audit at a European-based residential
nursing home called ABC that provides healthcare services. You find all nursing home residents wear an electronic wristband for monitoring their location, heartbeat, and blood pressure always. You learned that the electronic wristband automatically uploads all data to the artificial intelligence (AI) cloud server for healthcare monitoring and analysis by healthcare staff.

The next step in your audit plan is to verify that the information security policy and objectives have been established by top management.

During the audit, you found the following audit evidence.

Match the audit evidence to the corresponding requirement in ISO/IEC 27001:2022.

Audit Evidence	ISO/IEC 27001:2022 Requirements
The top management has signed and approved the ISMS policy (Document reference ID: ISMS_L1_01, version 1.3), mobile device policy (Document reference ID: ISMS_L2_07, version 1, release 4), and information security objectives are linked to Annex A's information security control objectives.	
Testing on 5 medical staff's mobile phones, all mobile phones are pin code protected screen lock and the 15 digits IME (International Mobile Equipment Identity) are registered in the asset register (Document reference ID: ISMS_L4_01, version 2.1).	
Interview with IT staff (employee ID: NH-1268); he is well informed and understood the mobile device policy. You checked his mobile phone and found it is 6 digits pin code protected and NO resident's data is stored.	
Interview with human resource manager; sampling on medical staff's information security roles and responsibilities are assigned in the job description (Document reference ID: ISMS_L4_04, version 1.0).	

To complete the table click on the blank section you want to complete so that it is highlighted in red, and then click on the applicable text from the options below. Alternatively, you may drag and drop each of the following ISO/IEC 27001 clauses to the correct statement.

Clause 5.1 a	Clause 7.3	A.8.1	Clause 5.3

NEW QUESTION # 296

The scope of an organization certified against ISO/IEC 27001 states that they provide editing and web hosting services. However, due to some changes in the organization, the technical support related to the web hosting services has been outsourced. Should a change in the scope be initiated in this case?

- A. No, because the organization is already certified for its editing and web hosting services
- B. No, because the change does not require implementation of new security controls
- C. Yes, because any change in the external environment initiates a change in the scope

Answer: C

Explanation:
Yes, a change in the scope should be initiated because outsourcing a significant part of the service, such as technical support related to web hosting, could impact the risk landscape and the controls needed to manage those risks. This change affects the external environment and how the ISMS operates, necessitating a scope review and possible adjustment.
