## ISO-IEC-27001-Foundation Examcollection Vce | ISO-IEC-27001-Foundation Authorized Certification

To maintain relevancy and top standard of APMG-International ISO-IEC-27001-Foundation exam questions, the ExamBoasts has hired a team of experienced and qualified APMG-International ISO-IEC-27001-Foundation exam trainers. They work together and check every ISO-IEC-27001-Foundation exam practice test question thoroughly and ensure the top standard of ISO-IEC-27001-Foundation Exam Questions all the time. So you do not need to worry about the relevancy and top standard of APMG-International ISO-IEC-27001-Foundation exam practice test questions.

### APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q31-Q36):

#### NEW QUESTION # 31

Which item is required to be considered when defining the scope and boundaries of the information security management system?

- A. The lessons learned from the information security experiences of other organizations
- **B. The dependencies between activities performed by the organization**
- C. The level of quality to which the ISMS must adhere
- D. The regular activities necessary to maintain and improve the ISMS

**Answer: B**

Explanation:

Clause 4.3 (Determining the scope of the ISMS) requires consideration of:

"the external and internal issues referred to in 4.1; the requirements referred to in 4.2; and interfaces and dependencies between activities performed by the organization, and those that are performed by other organizations." This confirms that dependencies between activities are a required factor when defining scope. Options B (quality levels), C (lessons learned), and D (regular activities for improvement) are not scope requirements, though they may be relevant in planning or improvement processes.

Thus, the verified answer is A: Dependencies between activities performed by the organization.

#### NEW QUESTION # 32

Which attribute is NOT a required focus of continual ISMS improvement?

- A. Effectiveness
- B. Adequacy
- **C. Importance**
- D. Suitability

**Answer: C**

Explanation:

Clause 10.2 (Continual Improvement) specifies that the organization must "continually improve the suitability, adequacy and effectiveness of the information security management system." This makes it clear that three attributes are explicitly required to be addressed:

\* Suitability: ensuring the ISMS continues to meet organizational needs in changing contexts.

\* Adequacy: ensuring the ISMS covers the necessary scope and provides sufficient control coverage.

\* Effectiveness: ensuring the ISMS achieves intended outcomes in protecting information security.

The word "importance" is not part of the continual improvement requirement. Importance is implicit in prioritization of risks and actions, but it is not a required continual improvement attribute in ISO/IEC 27001.

Therefore, option D: Importance is the correct choice as it is not specified.

This distinction reinforces that continual improvement is not about subjective importance, but about systematic enhancement of the ISMS's suitability, adequacy, and effectiveness.

### NEW QUESTION # 33

What is the definition of a threat according to ISO/IEC 27000?

- A. The risk remaining after risk treatment
- B. A weakness of an asset or a control that can be exploited
- C. A potential cause of an unwanted incident which can result in harm to a system or organization
- D. A single or a series of unwanted or unexpected information security events

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27000 standards:

According to ISO/IEC 27000:2018, Clause 3.74, a threat is defined as:

"Potential cause of an unwanted incident, which can result in harm to a system or organization." This definition directly matches option A.

\* Option B refers to an "information security incident" (ISO/IEC 27000:2018, Clause 3.32).

\* Option C describes a "vulnerability" (ISO/IEC 27000:2018, Clause 3.67).

\* Option D refers to "residual risk" (ISO/IEC 27000:2018, Clause 3.61).

The standard emphasizes that threats exploit vulnerabilities, causing incidents that can harm information confidentiality, integrity, and availability. Correctly identifying threats is critical for risk assessment (Clause 6.1.2). Thus, the correct definition per ISO/IEC 27000 is A.

### NEW QUESTION # 34

Which benefit is NOT relevant by implementing an ISMS for an organization?

- A. Information security controls are tailored to suit the organization's specific circumstances
- B. Information security risks are assessed and the probability and/or impact reduced
- C. Information security compliance will increase stakeholder trust in the organization
- D. Information security staff will be qualified to ISO/IEC 27001 Foundation level

**Answer: D**

Explanation:

The benefits of implementing an ISMS under ISO/IEC 27001 are well established. Clause 0.1 (General) explains that an ISMS provides a systematic approach to managing sensitive information and "preserves confidentiality, integrity, and availability of information by applying a risk management process and gives confidence to interested parties that risks are adequately managed." Option A is correct as a benefit, since trust and confidence from stakeholders is an outcome of compliance.

Option C is also a benefit, since controls are chosen and tailored based on organizational context and risk assessment (Clause 6.1.3). Option D reflects another real benefit—reducing the probability and/or impact of incidents through effective risk management. However, staff qualifications (option B) are not guaranteed benefits of implementing an ISMS. While training and competence (Clause 7.2) are required, the standard does not require or provide ISO/IEC 27001 Foundation-level certification for staff. That is an external training/certification scheme, not an ISMS outcome.

Therefore, the benefit NOT relevant to implementing ISO/IEC 27001 is B.

### NEW QUESTION # 35

Identify the missing word(s) in the following control relating to the Policies for information security control.

"Information security policy and topic-specific policies should be defined, approved by management, [ ? ] and acknowledged by relevant personnel and relevant interested parties, and reviewed at planned intervals and if significant changes occur."

- A. communicated to
- **B. published, communicated to**
- C. published
- D. established and maintained

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A.5.1 (Policies for information security) states:

"Information security policy and topic-specific policies should be defined, approved by management, published, communicated to and acknowledged by relevant personnel and relevant interested parties, and reviewed at planned intervals and if significant changes occur." This confirms that the missing words are "published, communicated to." The control emphasizes not just defining and approving policies but ensuring they are actively distributed and communicated so that relevant stakeholders are aware of and acknowledge them. Options A, B, and D are partial but incomplete.

Thus, the correct answer is C.

## NEW QUESTION # 36

.....

ExamBoosts's senior team of experts has developed training materials for APMG-International ISO-IEC-27001-Foundation exam. Through ExamBoosts's training and learning passing APMG-International certification ISO-IEC-27001-Foundation exam will be very simple. ExamBoosts can 100% guarantee you pass your first time to participate in the APMG-International Certification ISO-IEC-27001-Foundation Exam successfully. And you will find that our practice questions will appear in your actual exam. When you choose our help, ExamBoosts can not only give you the accurate and comprehensive examination materials, but also give you a year free update service.
