Our PDII-JPN study materials are very popular in the international market and enjoy wide praise by the people in and outside the circle. We have shaped our PDII-JPN exam questions into a famous and top-ranking brand and we enjoy well-deserved reputation among the clients. Our PDII-JPN study materials boast many outstanding and superior advantages which other same kinds of products don't have. The clients can try out and download our study materials before their purchase. They can immediately use our PDII-JPN training guide after they pay successfully.

You buy our Itcertking Salesforce PDII-JPN Certification which is 100% risk free. Before you decide to use Itcertking Salesforce PDII-JPN dumps, you can try our free demo and pdf. Click Itcertking, download it now! Affordable, and good service – free update for a year. Quality first. Welcomes your order. Thank you.

## Free PDII-JPN Brain Dumps, PDII-JPN Test Questions Answers

There is no another great way to pass the Salesforce PDII-JPN exam in the first attempt only by doing a selective study with valid PDII-JPN braindumps. If you already have a job and you are searching for the best way to improve your current PDII-JPN test situation, then you should consider the PDII-JPN Exam Dumps. By using our updated PDII-JPN products, you will be able to get reliable and relative PDII-JPN exam prep questions, so you can pass the exam easily. You can get one-year free PDII-JPN exam updates from the date of purchase.

## Salesforce Sample Questions (Q11-Q16):

### NEW QUESTION # 11

開発者は、特定の取引先レコードが Visualforce コントローラのテストクラスでテストされていることをどのように確認する必要がありますか？

- A. テストクラスにアカウントを挿入し、テストクラスでページ参照をインスタンス化し、`System.currentPageReference().getParameters().put()` を使用してアカウント ID を設定します。
- B. アカウントを Salesforce に挿入し、テストクラスでページ参照をインスタンス化し、システムを使用します。`setParentRecordId().get()` を使用してアカウント ID を設定します。  
`{of テストクラスでページ参照をインスタンス化し、テストクラスにアカウントを挿入し、seeAllData=True を使用してアカウントを表示します。}`
- C. テストクラスでページ参照をインスタンス化し、テストクラスにアカウントを挿入し、`System.setParentRecordId().get()` を使用してアカウント ID を設定します。

Answer: A

### NEW QUESTION # 12

QueryLocator を使用したレコード数のトランザクション制限は？

- A. 5,000,000
- B. 50,000,000
- C. 50,000
- D. 100,000
- E. 制限なし

Answer: B

Explanation:

Explanation

Explanation/Reference:

"Scope" parameter in "executeBatch" can be set up to 2,000 records

### NEW QUESTION # 13

開発者は、次のように、Queueable Interface を実装する 2 つのクラスを作成しました。

展開プロセスの一環として、開発者は対応するテストクラスを作成するように求められます。

テストクラスを正常に実行するには、開発者が実行する必要がある 2 つのアクションのうちどれですか？

2 つの答えを選択してください

- A. `System.enqueueJob(new OrderQueueableJob())` を Tess. and Test .stopTest 内に囲みます (1.)
- B. テストクラスの実行ユーザーが、Order オブジェクトに対するすべて表示権限を持っていることを確認します。
- C. `seeAllData=True` を実装して、Queueable ジョブを一括モードで実行できるようにします。
- D. テストを実施します。`isRunningTest()` を使用して、テスト実行中のジョブの連鎖を防ぎます。

Answer: A,D

Explanation:

When writing a test class for a Queueable class in Salesforce, the goal is to ensure that the asynchronous code is executed within the test context and that it does not affect the state of the production org or depend on its data.

Option C is correct because using `Test.startTest()` and `Test.stopTest()` ensures that the asynchronous code is executed immediately within the test's context. This is essential for testing Queueable classes because it allows the test to wait for the asynchronous process to complete before assertions are made.

Without this, the asynchronous job would not necessarily run during the test execution.

Option D is correct because `Test.isRunningTest()` can be used within the Queueable class to prevent the chaining of jobs during test execution. Chaining queueable jobs can lead to governor limits being hit and is generally not allowed in test methods. This conditional check allows the developer to bypass sections of the code not suitable for a testing context.

Option A is incorrect because the `seeAllData=True` annotation is not required for testing Queueable classes, and it is not a best practice to depend on live data for tests. It's preferable to create test data within the test class itself.

Option B is incorrect because having the 'View All' permission on the Order object is not related to the successful execution of the Queueable class in tests. Permissions are typically not enforced in test contexts unless using System.runAs() to test with a specific user context.

#### NEW QUESTION # 14

ビジネスでは、すべての親レコードに子レコードが必要です。開発者は、親レコードと子レコードを挿入する2つのDMLステートメントを含むApexメソッドを作成します。

検証ルールにより、子レコードの作成がブロックされます。このメソッドは、try/catchブロックを使用してDML例外を処理します。

親が常に子レコードを持つようにするには、開発者は何をすべきでしょうか？

- A. 子レコードでエラーが発生した場合は、親レコードでaddError()を使用します。
- B. ~~Database.insert()~~を使用し、allParametersをtrueに設定します。
- C. エラーが発生した場合にロールバックするデータベースセーブポイントを設定します。
- D. 子レコードのDML操作でエラーが発生した場合に、catchステートメントの親レコードを削除します。

Answer: B

#### NEW QUESTION # 15

Java

```
trigger AssignOwnerByRegion on Account ( before insert, before update ) { List<Account> accountList = new List<Account>();  
for( Account anAccount : trigger.new ) { Region__c theRegion = [ SELECT Id, Name, Region_Manager__c FROM Region__c  
WHERE Name = :anAccount.Region_Name__c  
];  
anAccount.OwnerId = theRegion.Region_Manager__c;  
accountList.add( anAccount );  
}  
update accountList;  
}
```

上記のトリガーについて考えてみましょう。ベストプラクティスに準拠するために、開発者はこのトリガーにどのような2つの変更を加えるべきでしょうか？30

- A. マップを使用して、Id.33によるRegion\_\_cクエリの結果をキャッシュします。
- B. accountListを更新する最後の行は不要なので削除します。31
- C. Region\_\_cクエリをループの外側に移動します。
- D. List accountList.32の代わりにMap accountMapを使用します。

Answer: B,C

Explanation:

The provided trigger contains two major violations of Salesforce Apex best practices.

\* SOQL inside a Loop (Option D): The query for Region\_\_c is located inside the for loop. If 200 accounts are updated at once, the trigger will attempt to run 200 queries, immediately hitting the governor limit of 100 SOQL queries per transaction. To fix this, the developer must "bulkify" the trigger by collecting all the Region\_Name\_\_c values into a Set, performing a single query outside the loop, and storing the results in a Map for quick access.

\* Redundant DML in a Before Trigger (Option A): This is a before insert and before update trigger. In the "before" context, changes made to Trigger.new records are automatically committed to the database when the trigger finishes. Adding an explicit update accountList; is not only unnecessary but will cause the trigger to re-fire (recursion), leading to performance issues and potential "Maximum stack depth" errors.

By removing the redundant DML and moving the query outside the loop, the trigger becomes efficient, scalable, and follows the platform's execution model correctly.

#### NEW QUESTION # 16

.....

Our PDII-JPN exam Braindumps are available in PDF, software, and online three modes, which allowing you to switch learning materials on paper, on your phone or on your computer, and to study anywhere and anytime. And in any version of PDII-JPN practice materials, the number of downloads and the number of people used at the same time are not limited. You can practice repeatedly for the same set of PDII-JPN Questions and continue to consolidate important knowledge points.
