facility, 1 year updated 300-425 exam questions download facility, affordable price and 100 percent Cisco 300-425 exam passing money back guarantee.

Cisco Designing Cisco Enterprise Wireless Networks Sample Questions (Q196-Q201):

NEW QUESTION # 196

A customer requires that two wireless APs be installed in a reception area, in a historic building, the impact of the APs on the appearance of the reception area must be minimized. Which two AP antennas should be used? (Choose two.)

- A. AP with a dipole antenna
- B. AP with a Yagi antenna
- C. AP with an integrated antenna
- D. AP with a monopole antenna
- E. AP with a patch antenna

Answer: B,E

NEW QUESTION # 197

An engineer must perform a Layer 2 survey for a mining facility. Which type of antenna does the engineer use in the mine shaft?

- A. patch
- B. omnidirectional
- C. dipole
- D. internal

Answer: A

Explanation:

Mine shafts are long narrow corridors, you would get more use out of a patch antenna as you don't require signal in all directions and the gain increase to reach further down the shaft.

NEW QUESTION # 198

Which statement about AP failover priority for access points when configured with priority 1 or 4 is true?

- A. When configured with priority 1, the access point is assigned with the medium priority level and it is marked as medium. This access point fails over after other access points with the higher priority when there is primary controller failure.
- B. When configured with priority 4, the access point is assigned with the highest priority level and it is marked as critical. This access point fails over before other access points with the lower priority when there is primary controller failure.
- C. When configured with priority 4, the access point is assigned with the lowest priority level and it is marked as low. This access point fails over after other access points with the higher priority when there is primary controller failure.
- D. When configured with priority 1, the access point is assigned with the highest priority level and it is marked as critical. This access point fails over before other access points with the lower priority when there is primary controller failure.

Answer: B

Explanation:

□

NEW QUESTION # 199

A wireless engineer is calibrating a floor using Cisco Prime Infrastructure. Which setting in the WLC must be disabled before the floor calibration is started?

- A. Tx Power Control
- B. Dynamic Channel Assignment
- C. CleanAir
- D. Coverage Hole Detection

Answer: A

NEW QUESTION # 200

In a stadium deployment, which WLAN design approach is most recommended?

- A. High-density design with sectorized directional antennas
- B. Ceiling-mounted omni antennas across the stadium bowl
- C. Few APs with maximum power on 2.4 GHz
- D. Deploying APs only on one side of the stadium

Answer: A

NEW QUESTION # 201
