

The Best Plat-Dev-210 Discount Code offer you accurate New Dumps Ppt | Salesforce Certified Omnistudio Developer

All of these prep formats pack numerous benefits necessary for optimal preparation. This Salesforce Certified Omnistudio Developer (Plat-Dev-210) practice material contains actual Salesforce Salesforce Certified Omnistudio Developer Questions that invoke conceptual thinking. TestPDF provides you with free-of-cost demo versions of the product so that you may check the validity and actuality of the Salesforce Plat-Dev-210 Dumps PDF before even buying it. We also offer a money-back guarantee, which means we are obliged to return 100% of your sum (terms and conditions apply) in case of any unsatisfactory results.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.
Topic 2	<ul style="list-style-type: none">• Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.
Topic 3	<ul style="list-style-type: none">• Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 4	<ul style="list-style-type: none">• Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.

New Plat-Dev-210 Dumps Ppt, Study Plat-Dev-210 Material

TestPDF is one of the leading platforms that has been helping Salesforce Exam Questions candidates for many years. Over this long time, period the Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam dumps helped countless Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam questions candidates and they easily cracked their dream Salesforce Plat-Dev-210 Certification Exam. You can also trust Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam dumps and start Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam preparation today.

Salesforce Certified Omnistudio Developer Sample Questions (Q45-Q50):

NEW QUESTION # 45

An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A Data Mapper Load saves the data. What error could cause this behavior?
Choose 2 answers

- A. The Input JSON paths in the Data Mapper Load do not match the JSON sent from the OmniScript.
- B. The fields that are not updated are read-only in Salesforce.
- C. In the Data Mapper Load, in the preview tab, the RecordId is from the wrong record type.
- D. ContextId is misspelled in the merge code that passes the RecordId to the Data Mapper.

Answer: A,B

Explanation:

According to the Salesforce OmniStudio DataRaptor documentation, specifically under DataRaptor Load Best Practices and Common Issues:

* A. "The Input JSON paths in the Data Mapper Load do not match the JSON sent from the OmniScript." This is a common configuration issue. If the paths between the OmniScript's structure and the DataRaptor Load mapping are mismatched, fields may not map correctly, resulting in partial updates or no updates.

* B. "The fields that are not updated are read-only in Salesforce." If a field is Read-Only at the field-level security (FLS) or object schema, DataRaptor Load will not be able to write to it, which explains why only some data is updated.

Incorrect Options:

* C. The RecordId from the wrong record type would typically cause a complete failure, not a partial update.

* D. A misspelled ContextId could prevent data from being linked correctly, but this is less likely to cause partial field-level issues, and more likely to affect record association.

NEW QUESTION # 46

Refer to the exhibit.

A developer creates an OmniScript display FirstName, LastName, and BirthDate of a contact using a Type Ahead Block. The DataRaptor used in the Type Ahead has been tested and fetches the correct data.

When previewing Omniscript, the developer enters a name in the Type Ahead and makes a selection of a contact from the list. However, the text fields FirstName, LastName, and BirthDate are not getting populated with the data.

What is the reason that the fields fail to display the fetched data?

- A. FirstName, LastName, and Birthdate are not placed inside the Type ahead Block.
- B. Lookup Mode is not selected in the properties of the Type A Head Block.
- C. Use Data JSON is not selected in the properties of the Type Ahead Block.
- D. The Typeahead ley is not in the correct format

Answer: A

Explanation:

The FirstName, LastName, and BirthDate fields should be placed inside the Type Ahead Block, so that they can receive the data from the selected record in the Type Ahead list. The Type Ahead Block has a Data JSON Path property that specifies the path to the data node that contains the record fields. For example, if the Data JSON Path is set to Contact, then the FirstName field should

have a Value property set to {{Contact.FirstName}}.

NEW QUESTION # 47

A developer creates a new FlexCard to display customer data and actions, such as updating billing information and changing the contact for the customer account. The FlexCard contains 10 fields and 5 actions.

During testing, several fields display with the correct data, but one of the fields shows only the label.

What could cause this?

- A. {recordId} is misspelled in the Data Source Input Map.
- B. There are no test parameters configured.
- C. The field is null on the Salesforce record.
- D. The fields have exceeded the maximum number allowed on the card.

Answer: C

Explanation:

According to the FlexCard Designer Overview page, another possible cause of a field showing only the label is that "the field is null on the Salesforce record".

NEW QUESTION # 48

A developer is configuring an integration Procedure Action in an OmniScript. The OmniScript needs a JSON response from the Integration Procedure but does not need to wait for the response for the user to proceed.

Which feature should the developer enable?

- A. Toast Completion
- B. Use Future
- C. Invoke Mode Fire and Forget
- D. Invoke Mode Non-Blocking

Answer: C

Explanation:

The Invoke Mode Fire and Forget feature enables the OmniScript to invoke the Integration Procedure without waiting for a response. This is useful when the response is not needed for the user to proceed.

NEW QUESTION # 49

An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A DataRaptor Load saves the data. What error could cause this behavior?

Choose 2 answers

- A. The input JSON paths in the DataRaptor Load do not match the JSON from the OmniScript.
- B. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type.
- C. ContextId is misspelled in the merge code that passes the RecordId to the DataRaptor
- D. The fields that are not updated are read only in Salesforce.

Answer: A,C

Explanation:

The input JSON paths in the DataRaptor Load must match the JSON from the OmniScript, otherwise the data will not be mapped correctly to the Salesforce fields. ContextId must be spelled correctly in the merge code that passes the RecordId to the DataRaptor, otherwise the DataRaptor will not be able to identify which record to update. The fields that are not updated are not necessarily read only in Salesforce, as they could be editable by other means. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type has no effect on updating data in Salesforce, as it is only used for testing purposes.

NEW QUESTION # 50

.....

If you want to enter a better company, a certificate for this field is quite necessary. Plat-Dev-210 learning materials of us will help you obtain the certificate successfully. Plat-Dev-210 exam braindumps of us are high quality, and they contain both questions and answers, and it will be enough for you to pass the exam. We also pass guarantee and money back guarantee if you fail to pass the exam if you buy Plat-Dev-210 Exam Dumps from us. Just think that you just need to spend some money, you can pass the exam and get the certificate and double your salary. Choose us, you can make it.
