

# Mule-Arch-201 Lead2pass - Reliable Mule-Arch-201 Cram Materials

P.S. Free & New Mule-Arch-201 dumps are available on Google Drive shared by Lead2Passed: [https://drive.google.com/open?id=1\\_mu9kYMfH-rdffK1LKYYDvYaed-SOpVN](https://drive.google.com/open?id=1_mu9kYMfH-rdffK1LKYYDvYaed-SOpVN)

Our Mule-Arch-201 study quiz boosts many advantages and it is your best choice to prepare for the test. Our Mule-Arch-201 learning prep is compiled by our first-rate expert team and linked closely with the real exam. And our Mule-Arch-201 training materials provide three versions and multiple functions to make the learners have no learning obstacles. The passing rate of our Mule-Arch-201 Guide materials is high and you don't need to worry that you have spent money but can't pass the test.

With so many methods can boost individual competitiveness, people may be confused, which can really bring them a glamorous work or brighter future? We are here to tell you that a Mule-Arch-201 certification definitely has everything to gain and nothing to lose for everyone. You might have seen lots of advertisements about Mule-Arch-201 learning question, there are so many types of Mule-Arch-201 exam material in the market, why you should choose us? Our reasons are as follow. Our Mule-Arch-201 test guide is test-oriented, which makes the preparation become highly efficient.

## Quiz 2026 Fantastic Mule-Arch-201: Salesforce Certified MuleSoft Platform Architect Lead2pass

Salesforce Mule-Arch-201 study materials will be very useful for all people to improve their learning efficiency. If you do all things with efficient, you will have a promotion easily. If you want to spend less time on preparing for your Mule-Arch-201 Exam, if you want to pass your Mule-Arch-201 exam and get the certification in a short time, our Salesforce Certified MuleSoft Platform Architect Mule-Arch-201 study materials will be your best choice to help you achieve your dream.

## Salesforce Certified MuleSoft Platform Architect Sample Questions (Q87-Q92):

### NEW QUESTION # 87

A team is planning to enhance an Experience API specification, and they are following API-led connectivity design principles.

What is their motivation for enhancing the API?

- A. The underlying System API is updated to provide more detailed data for several heavily used resources
- B. An IP Allowlist policy is being added to the API instances in the Development and Staging environments
- C. The primary API consumer wants certain kinds of endpoints changed from the Center for Enablement standard to the consumer system standard
- **D. A Canonical Data Model is being adopted that impacts several types of data included in the API**

**Answer: D**

Explanation:

In API-led design, an Experience API is enhanced to improve how data is delivered to end-user applications. One primary reason to enhance an Experience API is when new data standards, such as a Canonical Data Model, are adopted. Here's why:

Canonical Data Model (CDM):

Adopting a CDM standardizes data representations across the organization, making APIs more consistent and easier to consume across various services and applications.

Updating the Experience API ensures that it delivers data in this standardized format, improving interoperability and reusability.

of Correct Answer (D):  
A CDM impacts the structure and types of data the API provides, and this update would be directly relevant to an Experience API, as it is the primary point of interaction for applications.

of Incorrect Options:

Option A involves adapting to consumer-specific standards, which is against API-led design principles.

Option B involves changes in System APIs, which don't directly mandate changes to the Experience API unless data formatting adjustments are required.

Option C (IP Allowlist) relates to security rather than API design and would not motivate a functional enhancement of the API.

Reference

For more details on the use of Canonical Data Models in API-led architecture, refer to MuleSoft's guidelines on data standardization and Experience API best practices.

#### NEW QUESTION # 88

What CANNOT be effectively enforced using an API policy in Anypoint Platform?

- A. Logging HTTP requests and responses
- B. Backend system overloading
- C. Maintaining tamper-proof credentials between APIs
- **D. Guarding against Denial of Service attacks**

**Answer: D**

Explanation:

Correct Answer: Guarding against Denial of Service attacks

\*\*\*\*\*

>> Backend system overloading can be handled by enforcing "Spike Control Policy"

>> Logging HTTP requests and responses can be done by enforcing "Message Logging Policy"

>> Credentials can be tamper-proofed using "Security" and "Compliance" Policies However, unfortunately, there is no proper way currently on Anypoint Platform to guard against DOS attacks.

#### NEW QUESTION # 89

A code-centric API documentation environment should allow API consumers to investigate and execute API client source code that demonstrates invoking one or more APIs as part of representative scenarios.

What is the most effective way to provide this type of code-centric API documentation environment using Anypoint Platform?

- A. Enable mocking services for each of the relevant APIs and expose them via their Anypoint Exchange entry
- B. Make relevant APIs discoverable via an Anypoint Exchange entry
- C. Ensure the APIs are well documented through their Anypoint Exchange entries and API Consoles and share these pages with all API consumers
- **D. Create API Notebooks and include them in the relevant Anypoint Exchange entries**

**Answer: D**

Explanation:

Correct Answer: Create API Notebooks and Include them in the relevant Anypoint exchange entries

\*\*\*\*\*

>> API Notebooks are the one on Anypoint Platform that enable us to provide code-centric API documentation Reference:

### NEW QUESTION # 90

What is true about the technology architecture of Anypoint VPCs?

- A. Traffic between Mule applications deployed to an Anypoint VPC and on-premises systems can stay within a private network
- B. Each CloudHub environment requires a separate Anypoint VPC
- C. VPC peering can be used to link the underlying AWS VPC to an on-premises (non AWS) private network
- D. The private IP address range of an Anypoint VPC is automatically chosen by CloudHub

Answer: A

Explanation:

Correct Answer: Traffic between Mule applications deployed to an Anypoint VPC and on-premises systems can stay within a private network

\*\*\*\*\*

>> The private IP address range of an Anypoint VPC is NOT automatically chosen by CloudHub. It is chosen by us at the time of creating VPC using the CIDR blocks.

CIDR Block: The size of the Anypoint VPC in Classless Inter-Domain Routing (CIDR) notation.

For example, if you set it to 10.111.0.0/24, the Anypoint VPC is granted 256 IP addresses from 10.111.0.0 to 10.111.0.255.

Ideally, the CIDR Blocks you choose for the Anypoint VPC come from a private IP space, and should not overlap with any other Anypoint VPC's CIDR Blocks, or any CIDR Blocks in use in your corporate network.

□ that each CloudHub environment requires a separate Anypoint VPC. Once an Anypoint VPC is created, we can choose a same VPC by multiple environments. However, it is generally a best and recommended practice to always have separate Anypoint VPCs for Non-Prod and Prod environments.

>> We use Anypoint VPN to link the underlying AWS VPC to an on-premises (non AWS) private network. NOT VPC Peering.

Reference:

Only true statement in the given choices is that the traffic between Mule applications deployed to an Anypoint VPC and on-premises systems can stay within a private network.

### NEW QUESTION # 91

Which of the following best fits the definition of API-led connectivity?

- A. API-led connectivity is a technology which enabled us to implement Experience, Process and System layer based APIs
- B. API-led connectivity is not just an architecture or technology but also a way to organize people and processes for efficient IT delivery in the organization
- C. API-led connectivity is a 3-layered architecture covering Experience, Process and System layers

Answer: B

Explanation:

Correct Answer: API-led connectivity is not just an architecture or technology but also a way to organize people and processes for efficient IT delivery in the organization.
